TRAPOD

TRIPOD Checklist: Prediction Model Development

Section/Topic	ltem	Checklist Item	Page
Title and abstract			
Title	1	Identify the study as developing and/or validating a multivariable prediction model, the target population, and the outcome to be predicted.	1
Abstract	2	Provide a summary of objectives, study design, setting, participants, sample size, predictors, outcome, statistical analysis, results, and conclusions.	1-2
Introduction		,,,,,,,,	
Background and objectives	3a 3b	Explain the medical context (including whether diagnostic or prognostic) and rationale for developing or validating the multivariable prediction model, including references to existing models. Specify the objectives, including whether the study describes the development or	3-4 4
	30	validation of the model or both.	4
Methods		Describe the study desires an environ of data (a.e., and described trial solvert, en	[
Source of data	4a	Describe the study design or source of data (e.g., randomized trial, cohort, or registry data), separately for the development and validation data sets, if applicable.	4
	4b	Specify the key study dates, including start of accrual; end of accrual; and, if applicable, end of follow-up.	4
Participants	5a	Specify key elements of the study setting (e.g., primary care, secondary care, general population) including number and location of centres.	4
	5b	Describe eligibility criteria for participants.	5
	5c	Give details of treatments received, if relevant.	N/A
Outcome	6a	Clearly define the outcome that is predicted by the prediction model, including how and when assessed.	5-7
	6b	Report any actions to blind assessment of the outcome to be predicted.	6-7
Predictors	7a	Clearly define all predictors used in developing or validating the multivariable prediction model, including how and when they were measured.	7-8
	7b	Report any actions to blind assessment of predictors for the outcome and other predictors.	6-8
Sample size	8	Explain how the study size was arrived at.	8-9
Missing data	9	Describe how missing data were handled (e.g., complete-case analysis, single	9
Missing data		imputation, multiple imputation) with details of any imputation method.	
Statistical	10a	Describe how predictors were handled in the analyses.	9-10
Statistical analysis methods	10b	Specify type of model, all model-building procedures (including any predictor selection), and method for internal validation.	10
	10d	Specify all measures used to assess model performance and, if relevant, to compare multiple models.	10-1
Risk groups	11	Provide details on how risk groups were created, if done.	6
Results			-
Participants	13a	Describe the flow of participants through the study, including the number of participants with and without the outcome and, if applicable, a summary of the follow-up time. A diagram may be helpful.	11-12
	13b	Describe the characteristics of the participants (basic demographics, clinical features, available predictors), including the number of participants with missing data for predictors and outcome.	12-13 and Table 1. (28 29)
Model development	14a	Specify the number of participants and outcome events in each analysis.	13 and Table 1. (28 29
		If done, report the unadjusted association between each candidate predictor and
