

Supplementary Figure 1. Effect of TGF- β on CD206 expression of disc macrophages in the presence of IL-10

Disc macrophages (DMs) were exposed to α -MEM (vehicle), 10 ng/mL mouse recombinant (mh) TGF- β + 10 ng/ml IL-10 (TGF), or recombinant (mh) TGF- β + 10 ng/ml IL-10 (TGF/IL10) for 24 h. RT-PCR analysis showed that TGF increased Cd206 expression in the presence of IL-10; however, TGF- β showed no effect on CD206 in the absence of IL-10 in vitro.
