Figure S1

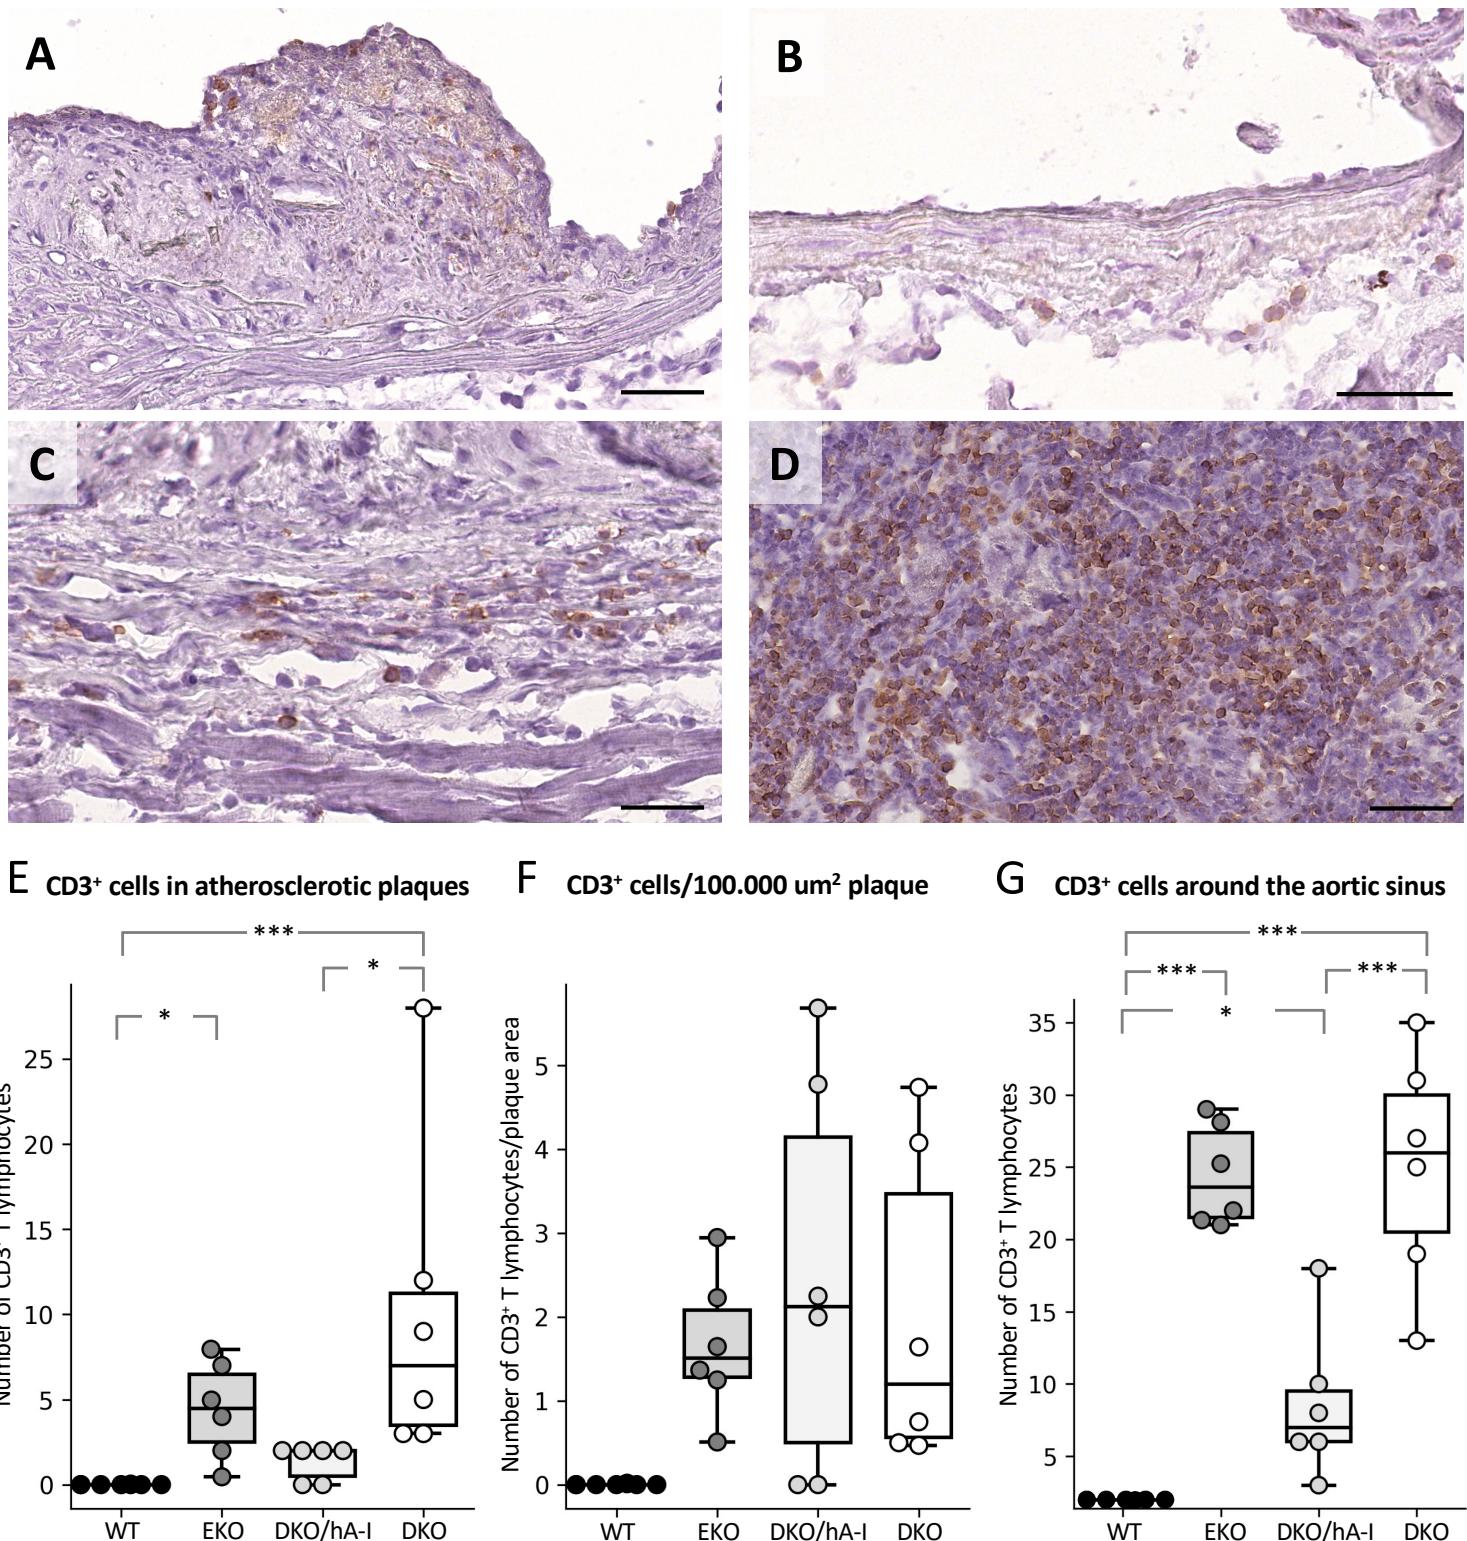

Body weight (**A**), spleen weight/body weight ratio (**B**), lymph node weight/body weight ratio (**C**) in the four genotypes, n=6. * $p<0.05$; ** $p<0.01$; *** $p<0.001$. Statistically significant differences were determined with ANOVA followed by Tukey's post-hoc test. The upper and lower ends of the boxes indicate the 25th and 75th percentiles, respectively. The length of the box shows the interquartile range within which 50% of the values are located. The solid grey lines denote the median. Exact adjusted p-values are shown in Table S1.

Figure S2

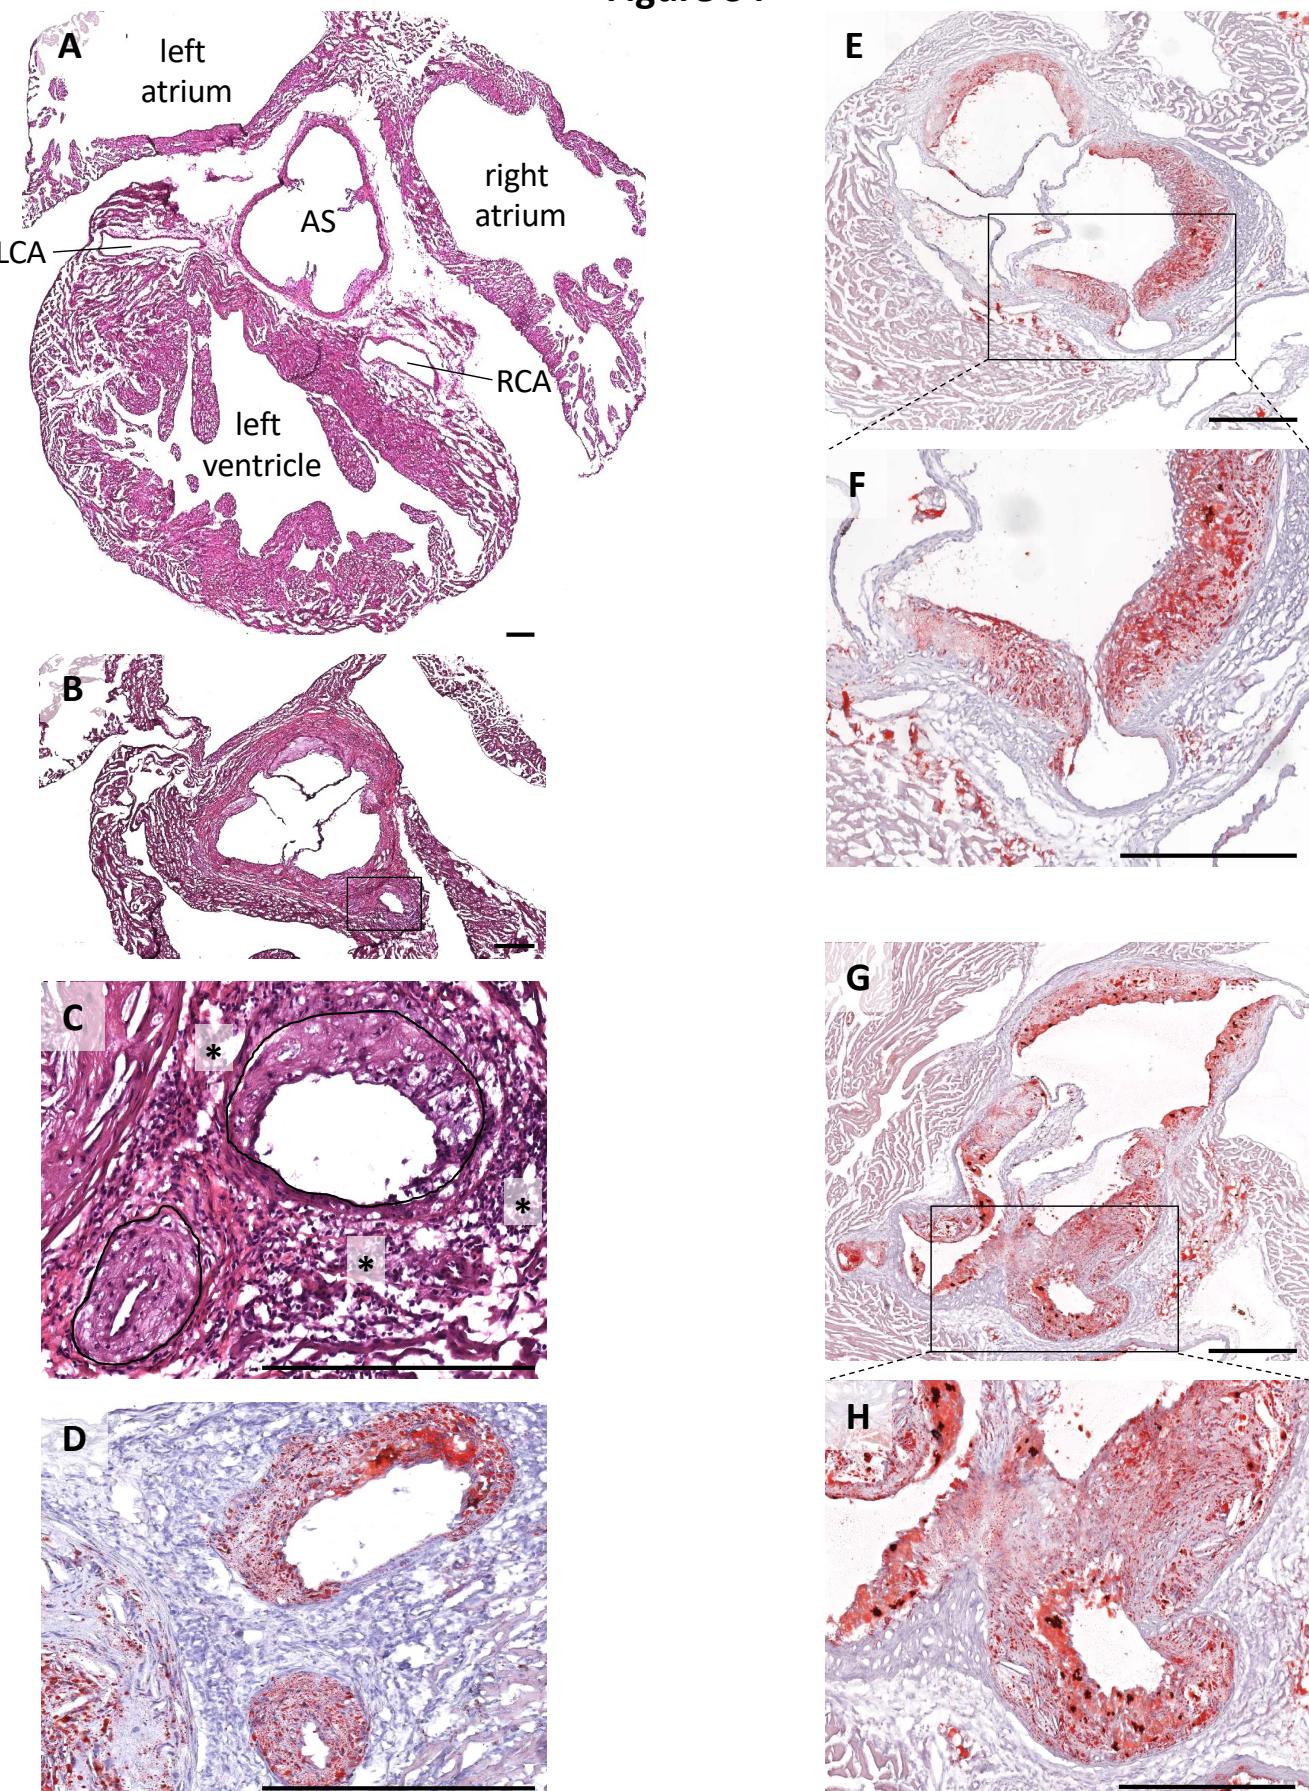

Immunohistochemical staining of macrophages in the aortic sinus of DKO (A), EKO (B) and DKO/hA-I (C). The area occupied by macrophages was significantly reduced in DKO/hA-I vs EKO and DKO mice (E), although plaque % composition was not different among EKO, DKO/hA-I and DKO (F). A positive control from a lymph node cryosection is shown (D). Statistically significant differences were determined by ANOVA followed by Tukey's post-hoc. * p<0.05; **p<0.01; ***p<0.001. Bar length: 100 μm . The upper and lower ends of the boxes indicate the 25th and 75th percentiles, respectively. The length of the box shows the interquartile range within which 50% of the values are located. The solid grey lines denote the median. Exact adjusted p-values are shown in Table S1.

Figure S3

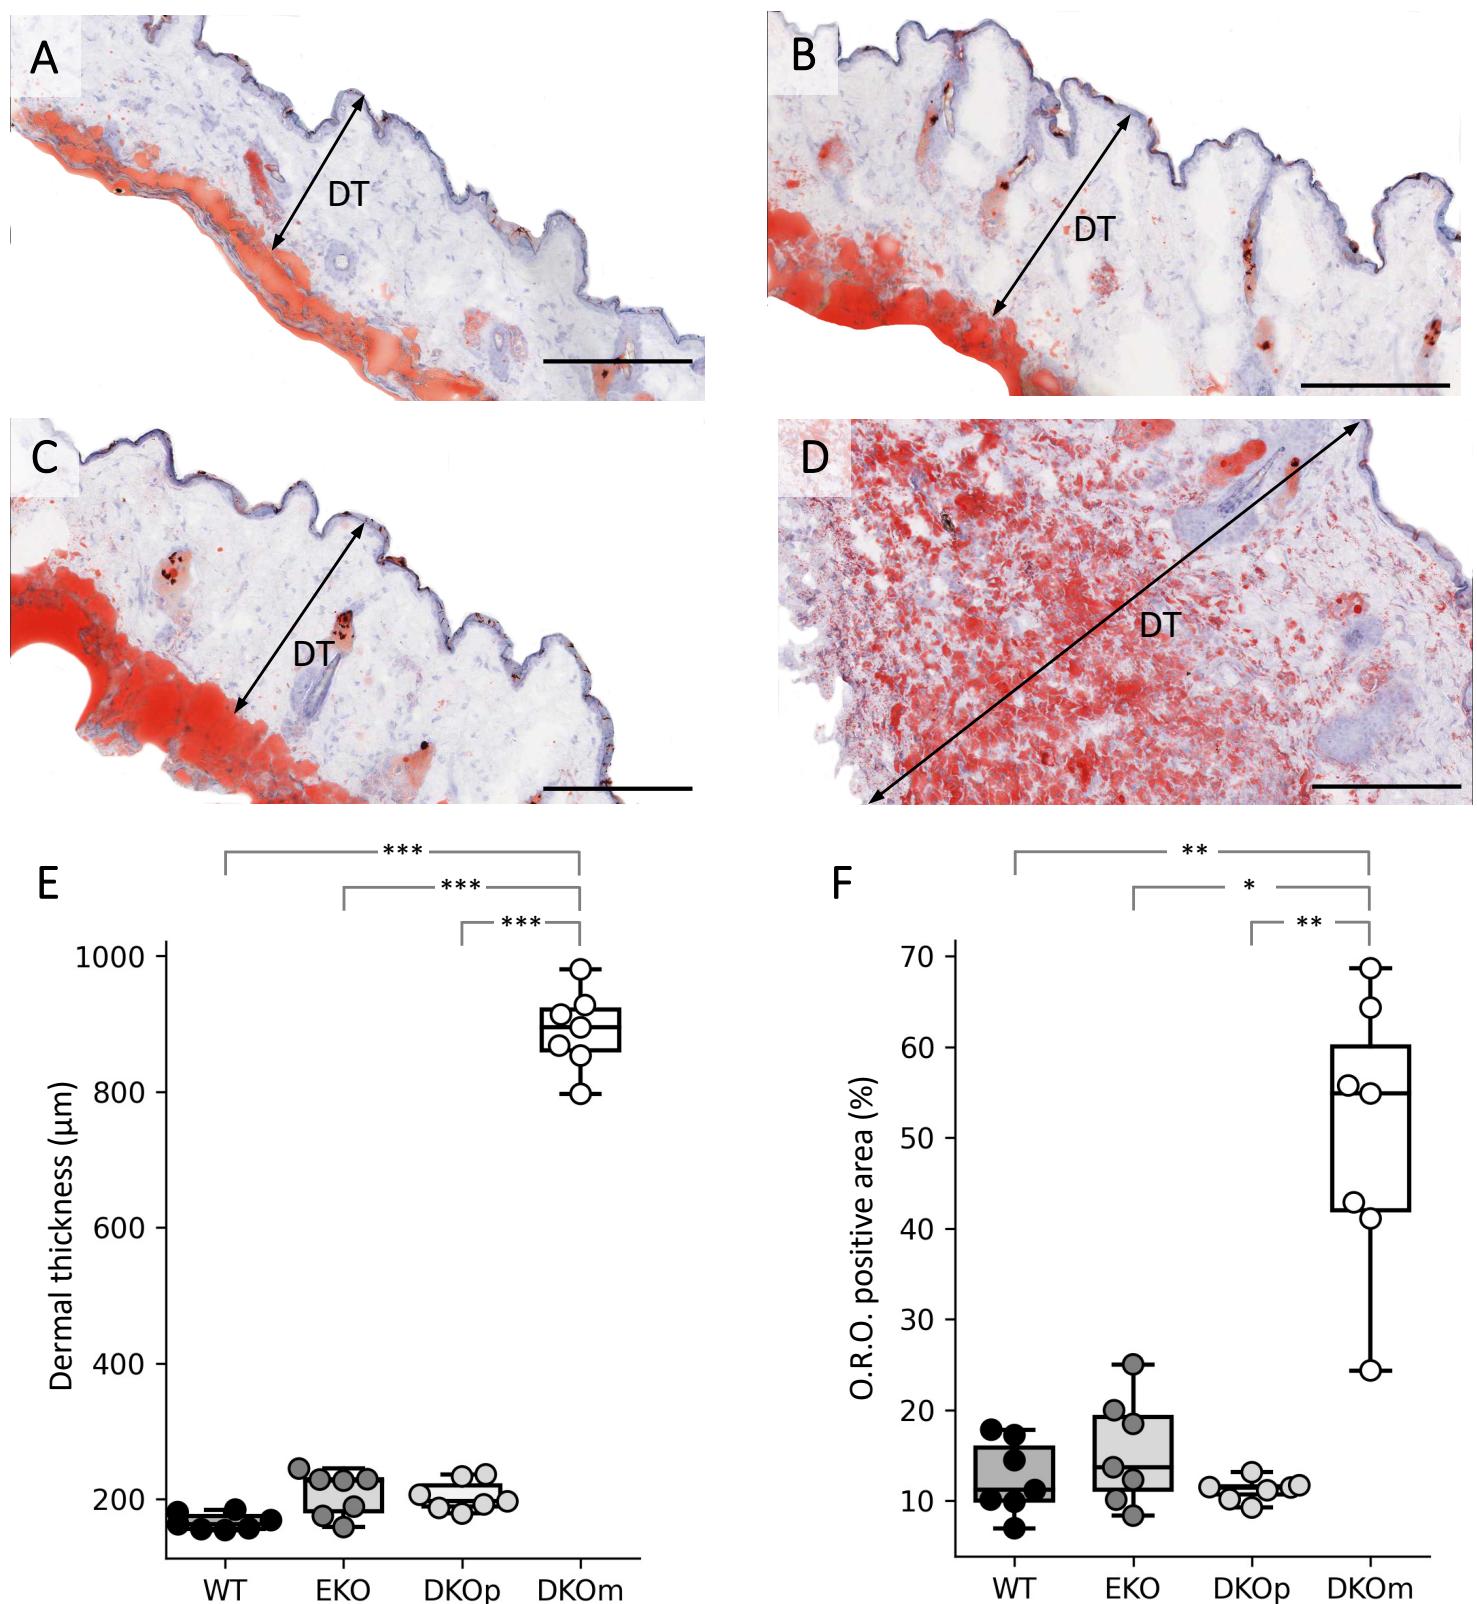

Immunohistochemical staining of CD3⁺ T lymphocytes in the aortic sinus. A tendency towards an increased count of CD3⁺ cells was observed in the atherosclerotic plaques of DKO mice (A, E). No differences were observed when CD3⁺ cells count was normalized to plaque area (F). In addition, the presence of CD3⁺ cells was evaluated in the myocardium immediately surrounding the aortic sinus: the count of CD3⁺ cells observed in DKO/hA-I was comparable with that of WT (B, G) and significantly increased in EKO and DKO mice (C, G). A positive control from a lymph node cryosection is shown (D). Statistically significant differences were determined by Kruskal-Wallis followed by Dunn's post-hoc test in (E) and by ANOVA followed by Tukey's post-hoc in (F) and (G). *p<0.05; ***p<0.001. Bar length: 50 μm. The upper and lower ends of the boxes indicate the 25th and 75th percentiles, respectively. The length of the box shows the interquartile range within which 50% of the values are located. The solid grey lines denote the median. Exact adjusted p-values are shown in Table S1.

Figure S4

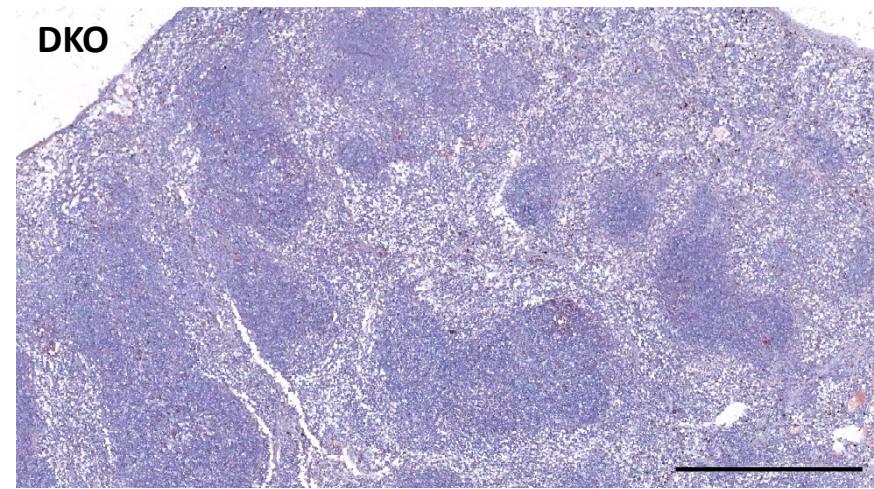

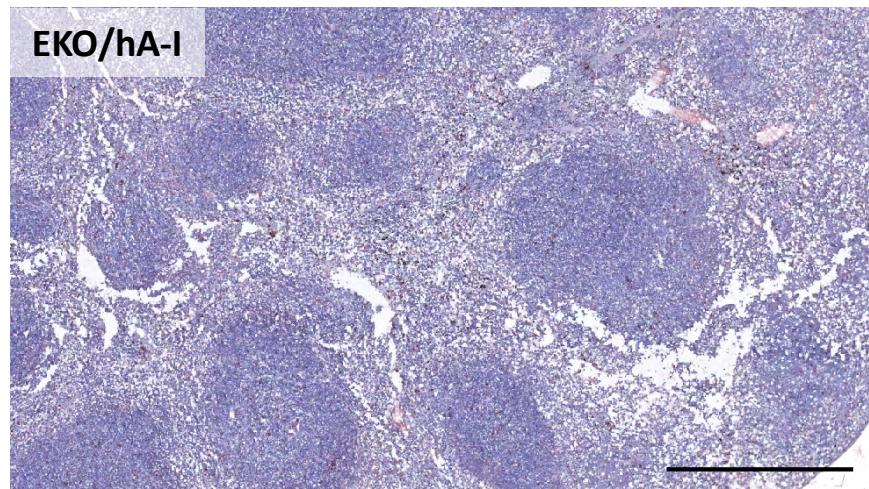

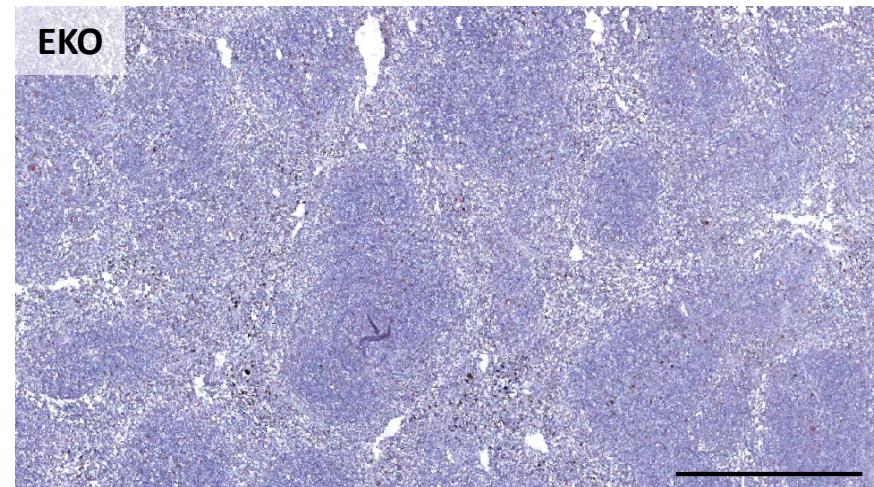

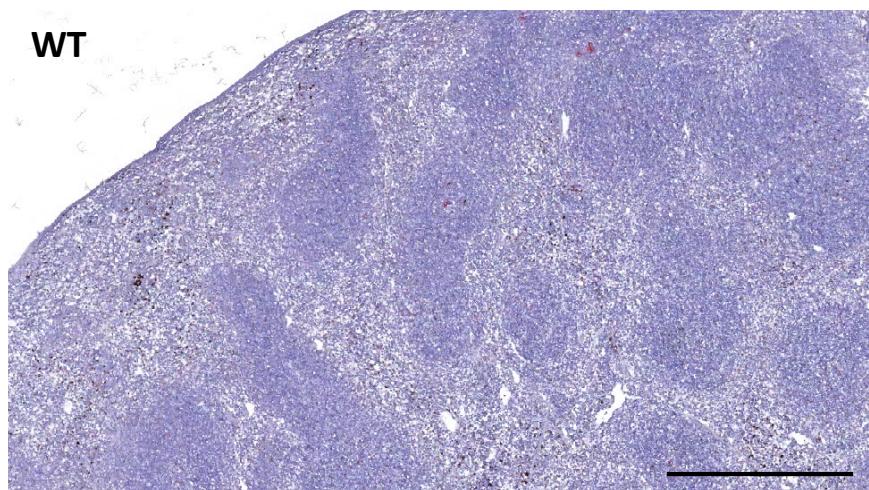

Representative H&E staining of the aortic sinus (AS) with the origin of left (LCA) and right coronary arteries (RCA) (**A**). Aortic sinus from a DKO mouse with coronary plaques (**B**). Magnifications showing lymphocytes infiltrating the myocardium around the coronary arteries (asterisks, **C**) and neutral lipid accumulation in coronary plaques by O.R.O. staining (**D**). Representative O.R.O. stained pictures of plaque development at the ostia of the right coronary artery of EKO (**E**) and DKO mice (**G**). Magnifications of the same plaques are shown (**F**, **H**). Bar: 250 µm.

Figure S5

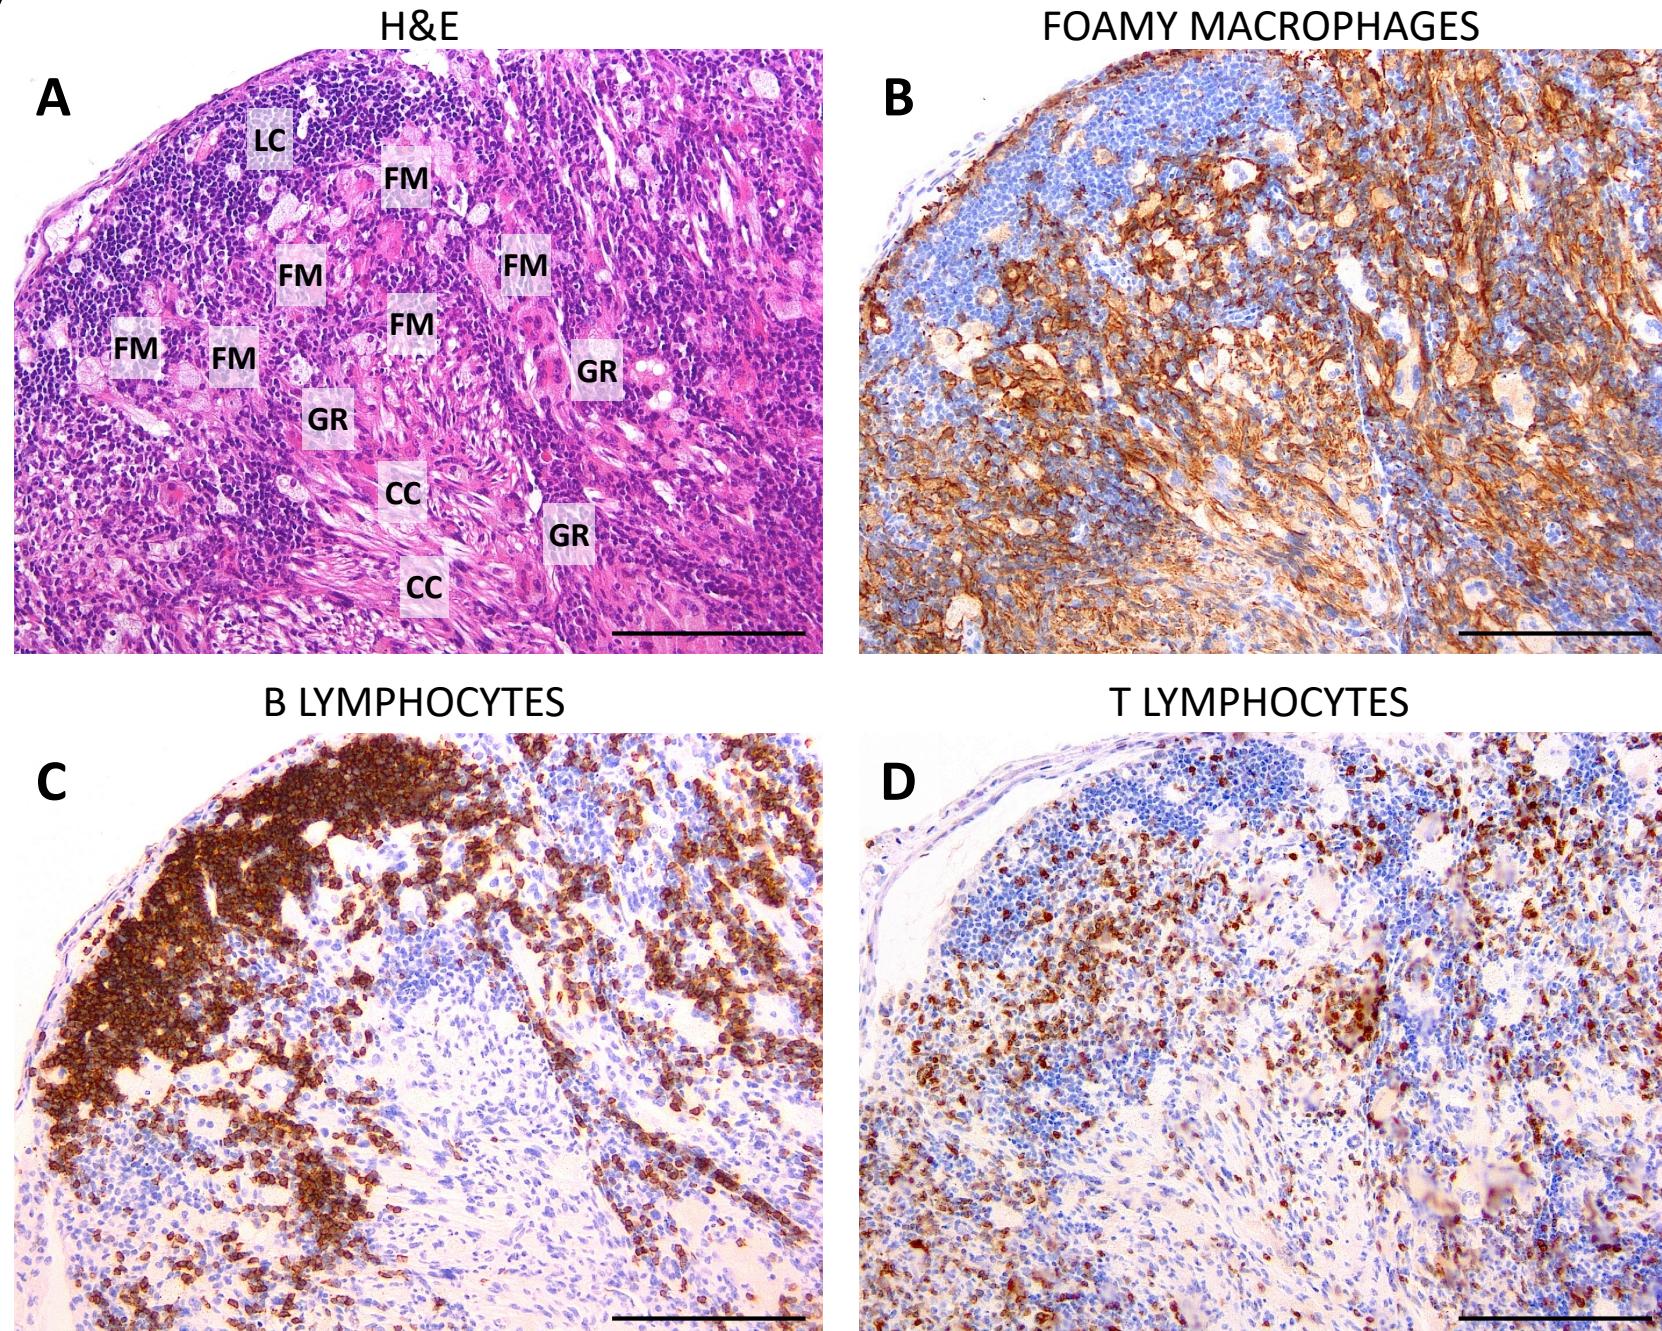

Representative photomicrographs of skin cryosections stained with O.R.O. from WT (A), EKO (B), DKO/hA-I (C) and DKO (D). The epidermis was unaltered regardless of the genotype, whereas, only in DKO, the dermis was thickened (E) and showed increased neutral lipid deposition (F). DT = dermal thickness (n=7). Statistically significant differences were determined by ANOVA followed by Tukey's post-hoc in (E) and by Kruskal-Wallis followed by Dunn's post-hoc test in (F). *p<0.05; **p<0.01; ***p<0.001. Bar length = 100 μm. The upper and lower ends of the boxes indicate the 25th and 75th percentiles, respectively. The length of the box shows the interquartile range within which 50% of the values are located. The solid grey lines denote the median. Exact adjusted p-values are shown in Table S1.

Figure S6

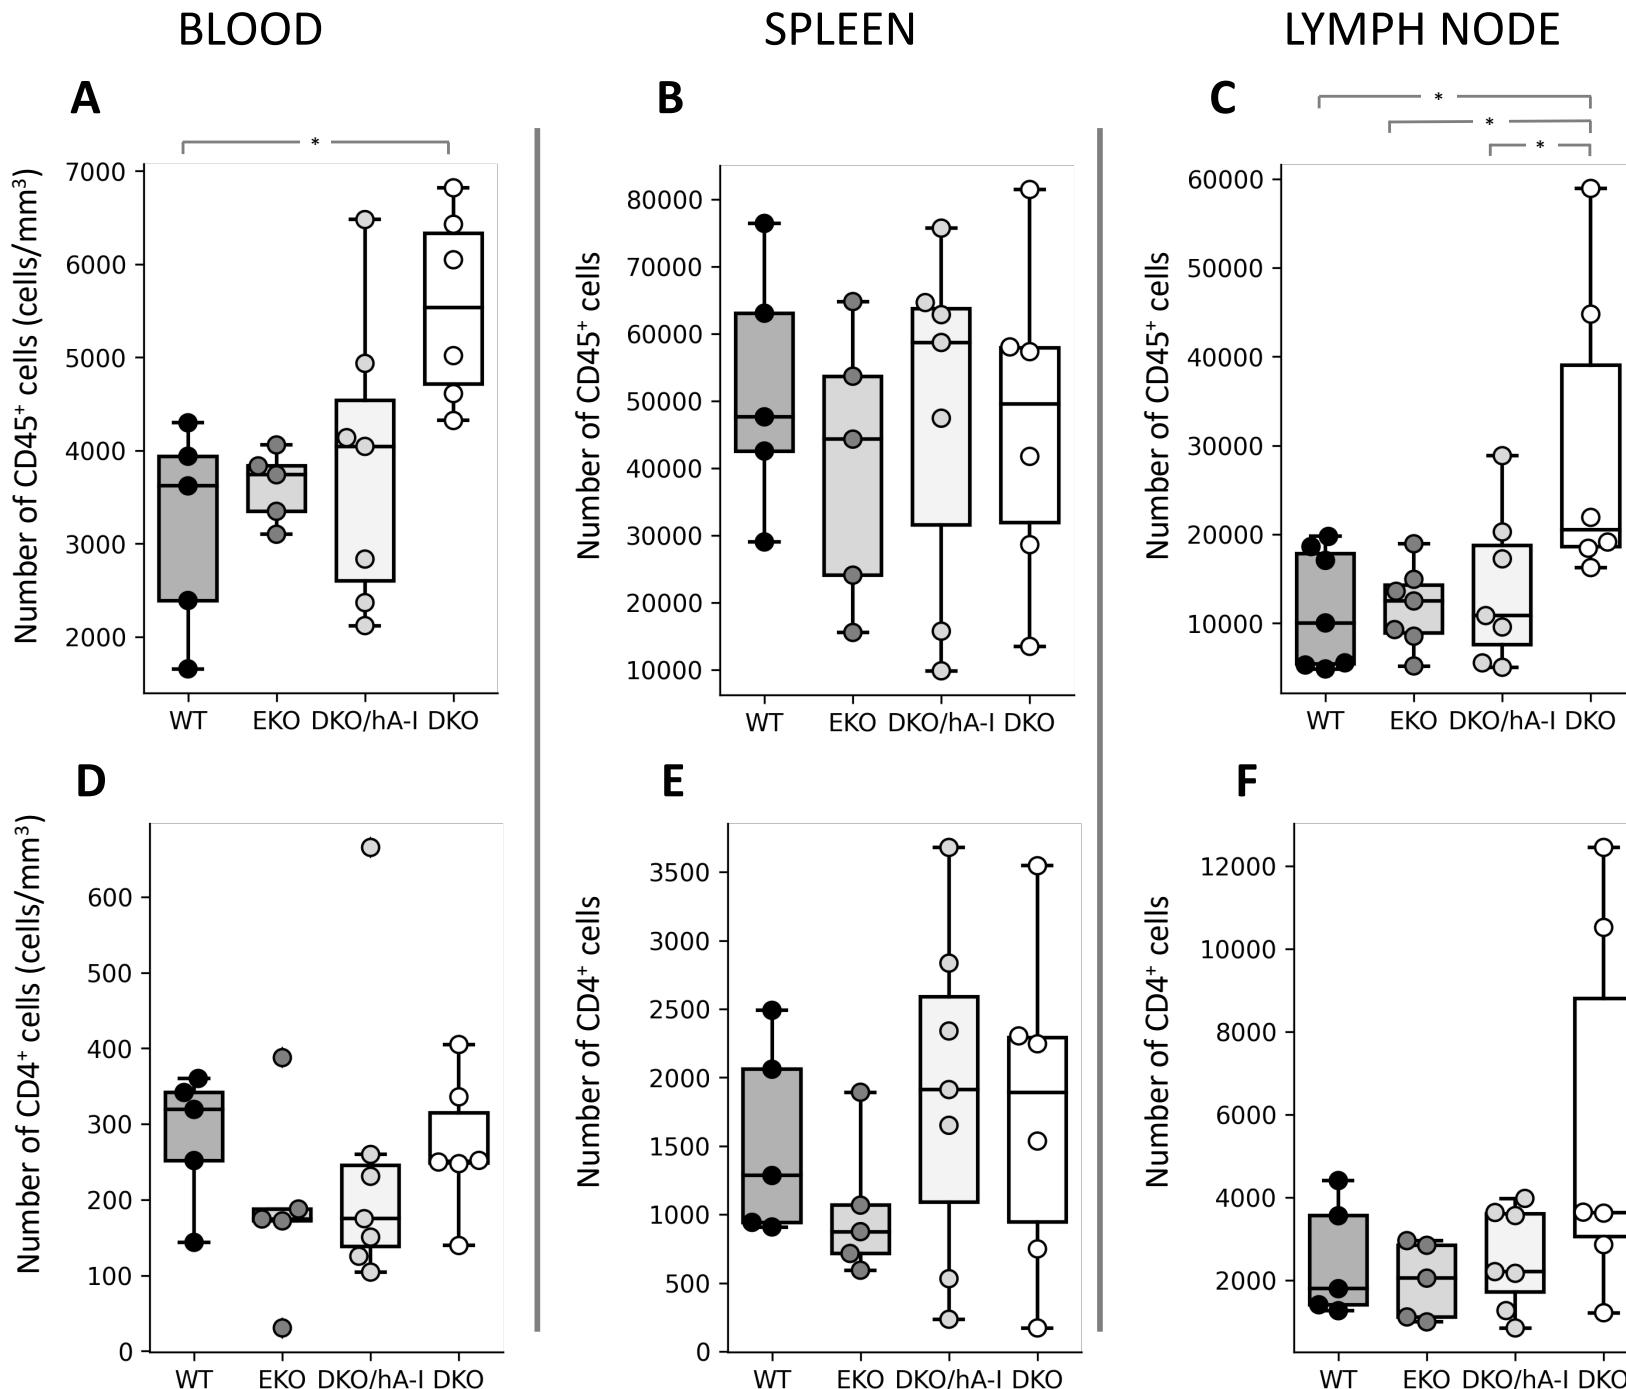

Representative photomicrographs of spleen cryosections stained with Oil Red O. Spleen histology and neutral lipid deposition were unaffected by genotype. Bar length = 200 μm .

Figure S7

Histological and immunohistochemical characterization of a DKO lymph node. H&E staining (**A**) FM: foamy macrophages; LC: lymphoid cells; GR: granulomatous reactions; CC: cholesterol crystals. Foamy macrophages (IBA1⁺ cells; **B**), B lymphocytes (B220⁺ cells; **C**), T lymphocytes (CD3⁺ cells; **D**). Bar length=100 µm.

Figure S8

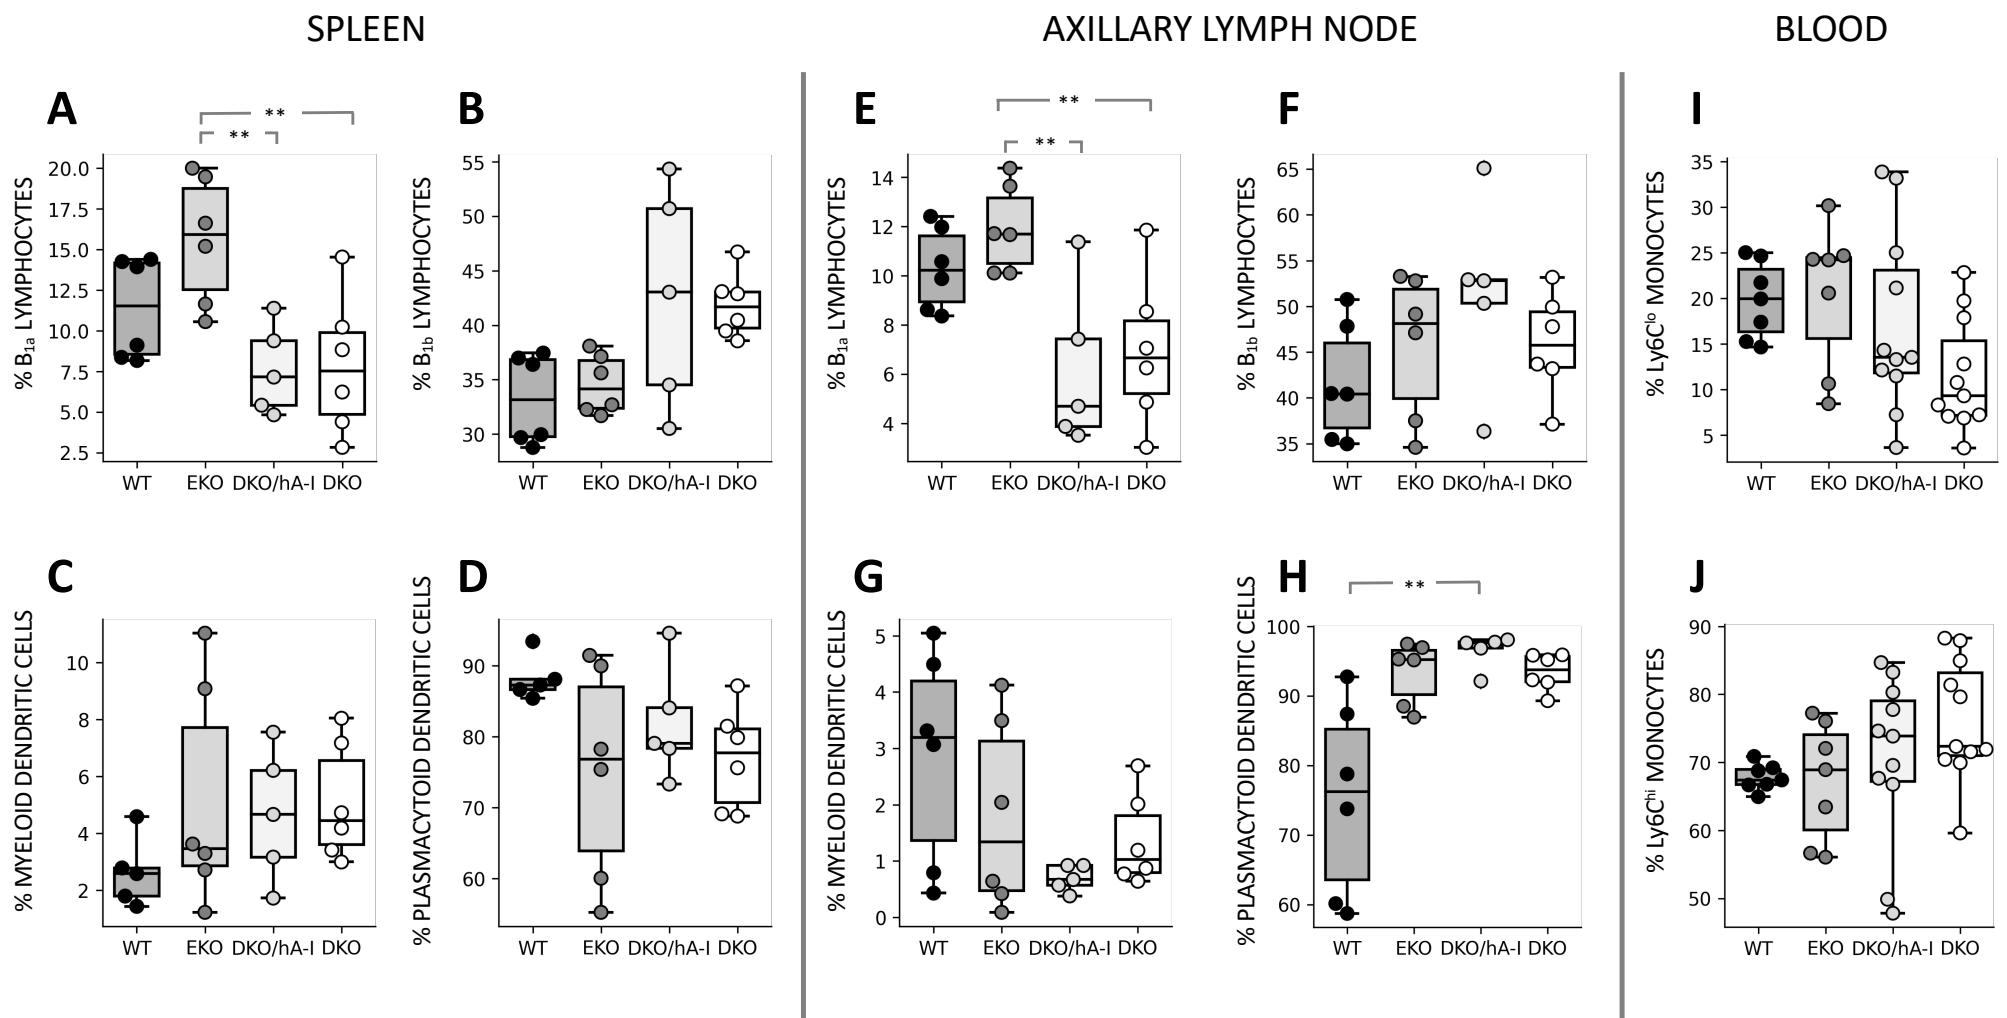

Absolute counts of CD4 and CD45 positive cells in blood (left), spleen (middle) and axillary lymph node (right) in the four genotypes (n=5-7). *p<0.05.

Statistically significant differences were determined with Kruskal-Wallis followed by Dunn's post-hoc test (A), or with ANOVA followed by Tukey's post-hoc test (B-F).

The upper and lower ends of the boxes indicate the 25th and 75th percentiles, respectively.

The length of the box shows the interquartile range within which 50% of the values are located. The solid grey lines denote the median. Exact adjusted p-values are shown in Table S1.

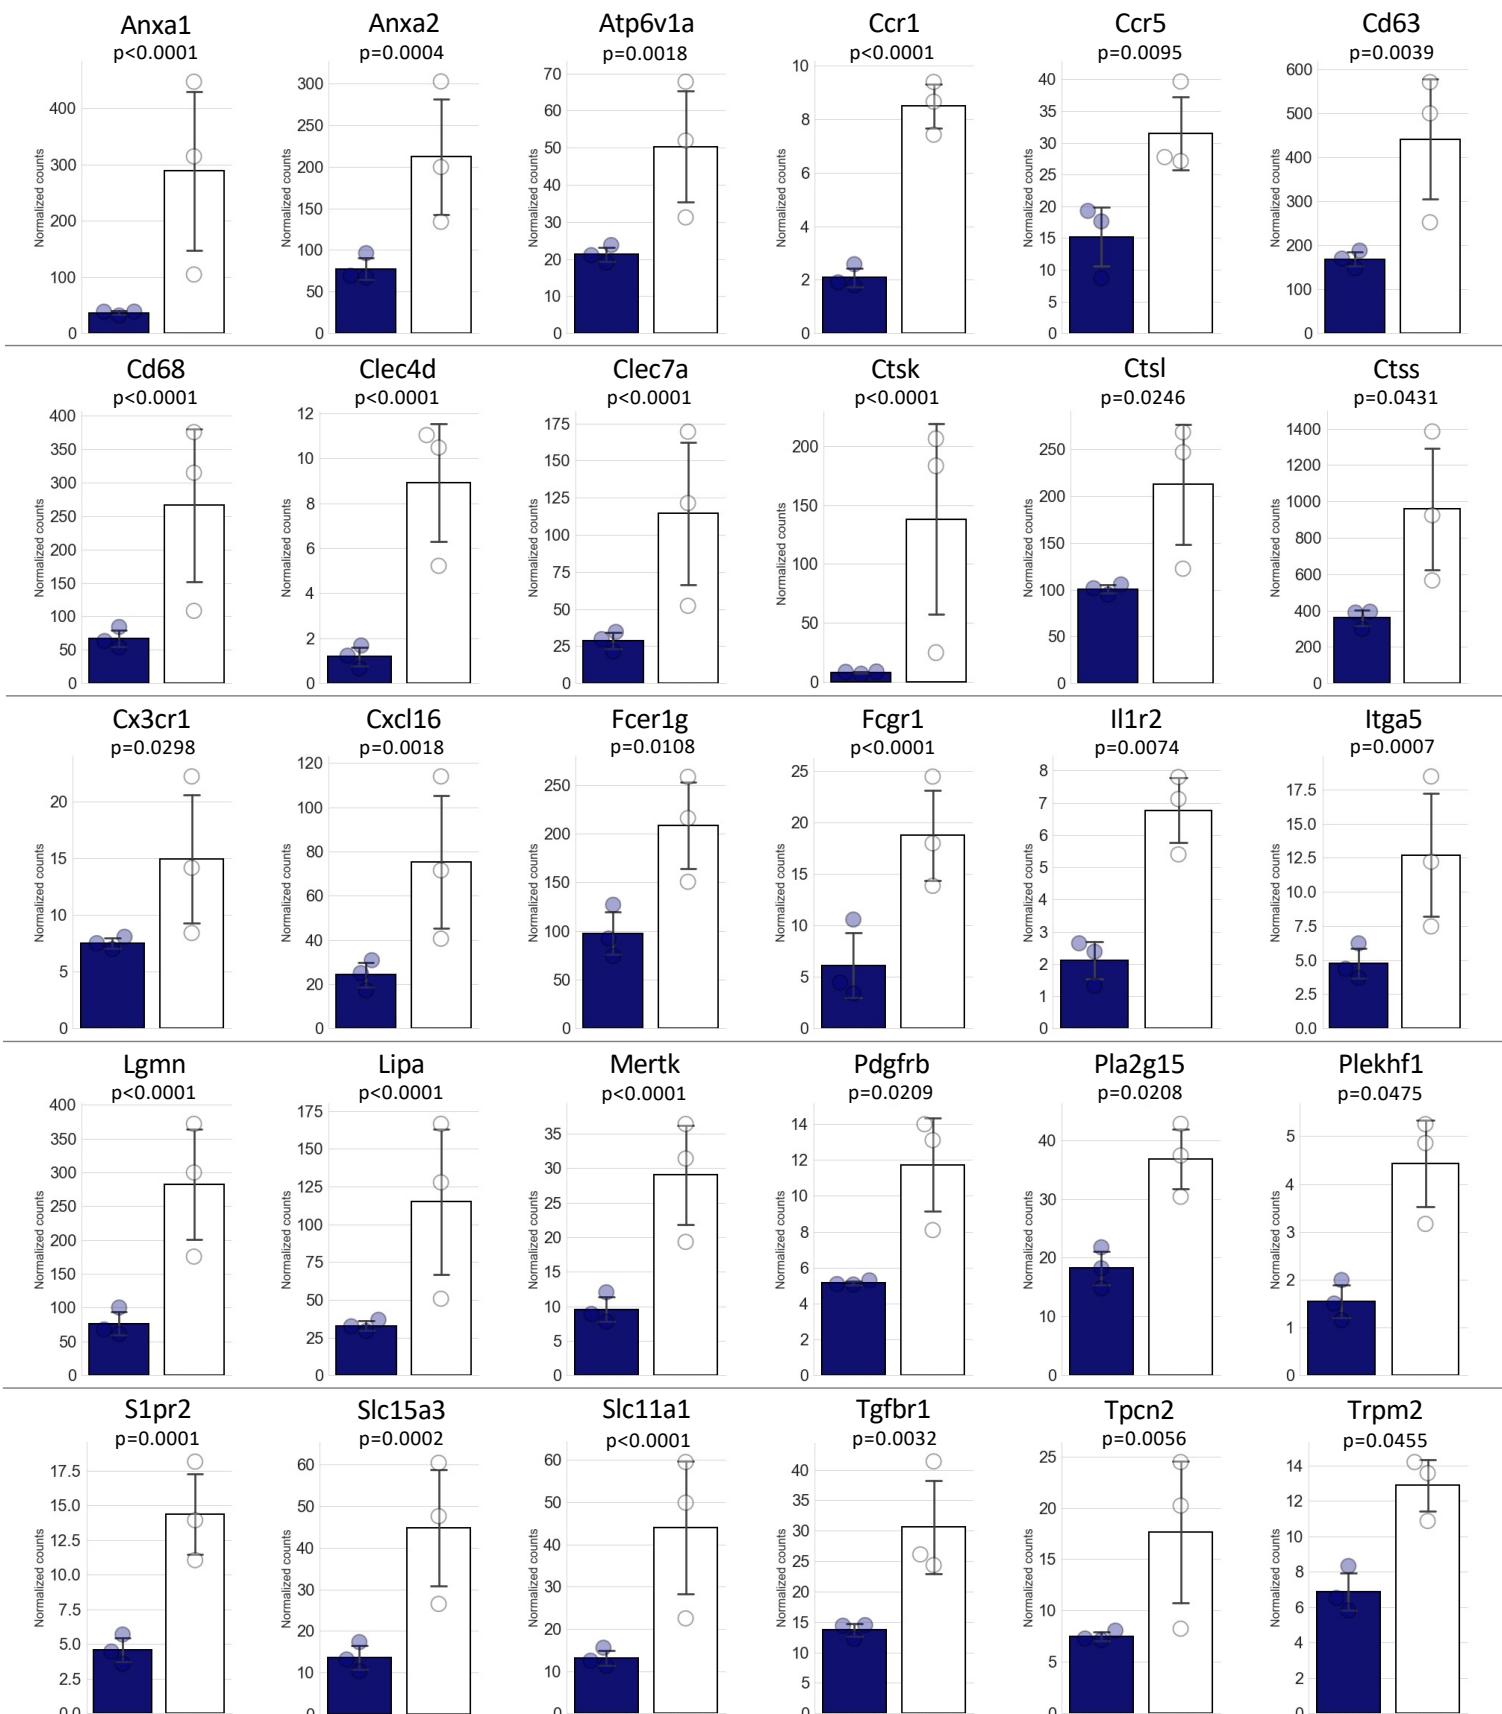

Figure S9

FACS analyses results for immune cells subsets in spleen (left), axillary lymph node (middle) and blood (right) in the four genotypes. *p<0.05; **p<0.01. Statistically significant differences were determined with ANOVA followed by Tukey's post-hoc test except for **H**, where Kruskal-Wallis followed by Dunn's post-hoc was used. The upper and lower ends of the boxes indicate the 25th and 75th percentiles, respectively. The length of the box shows the interquartile range within which 50% of the values are located. The solid grey lines denote the median. Exact adjusted p-values are shown in Table S1.

Figure S10

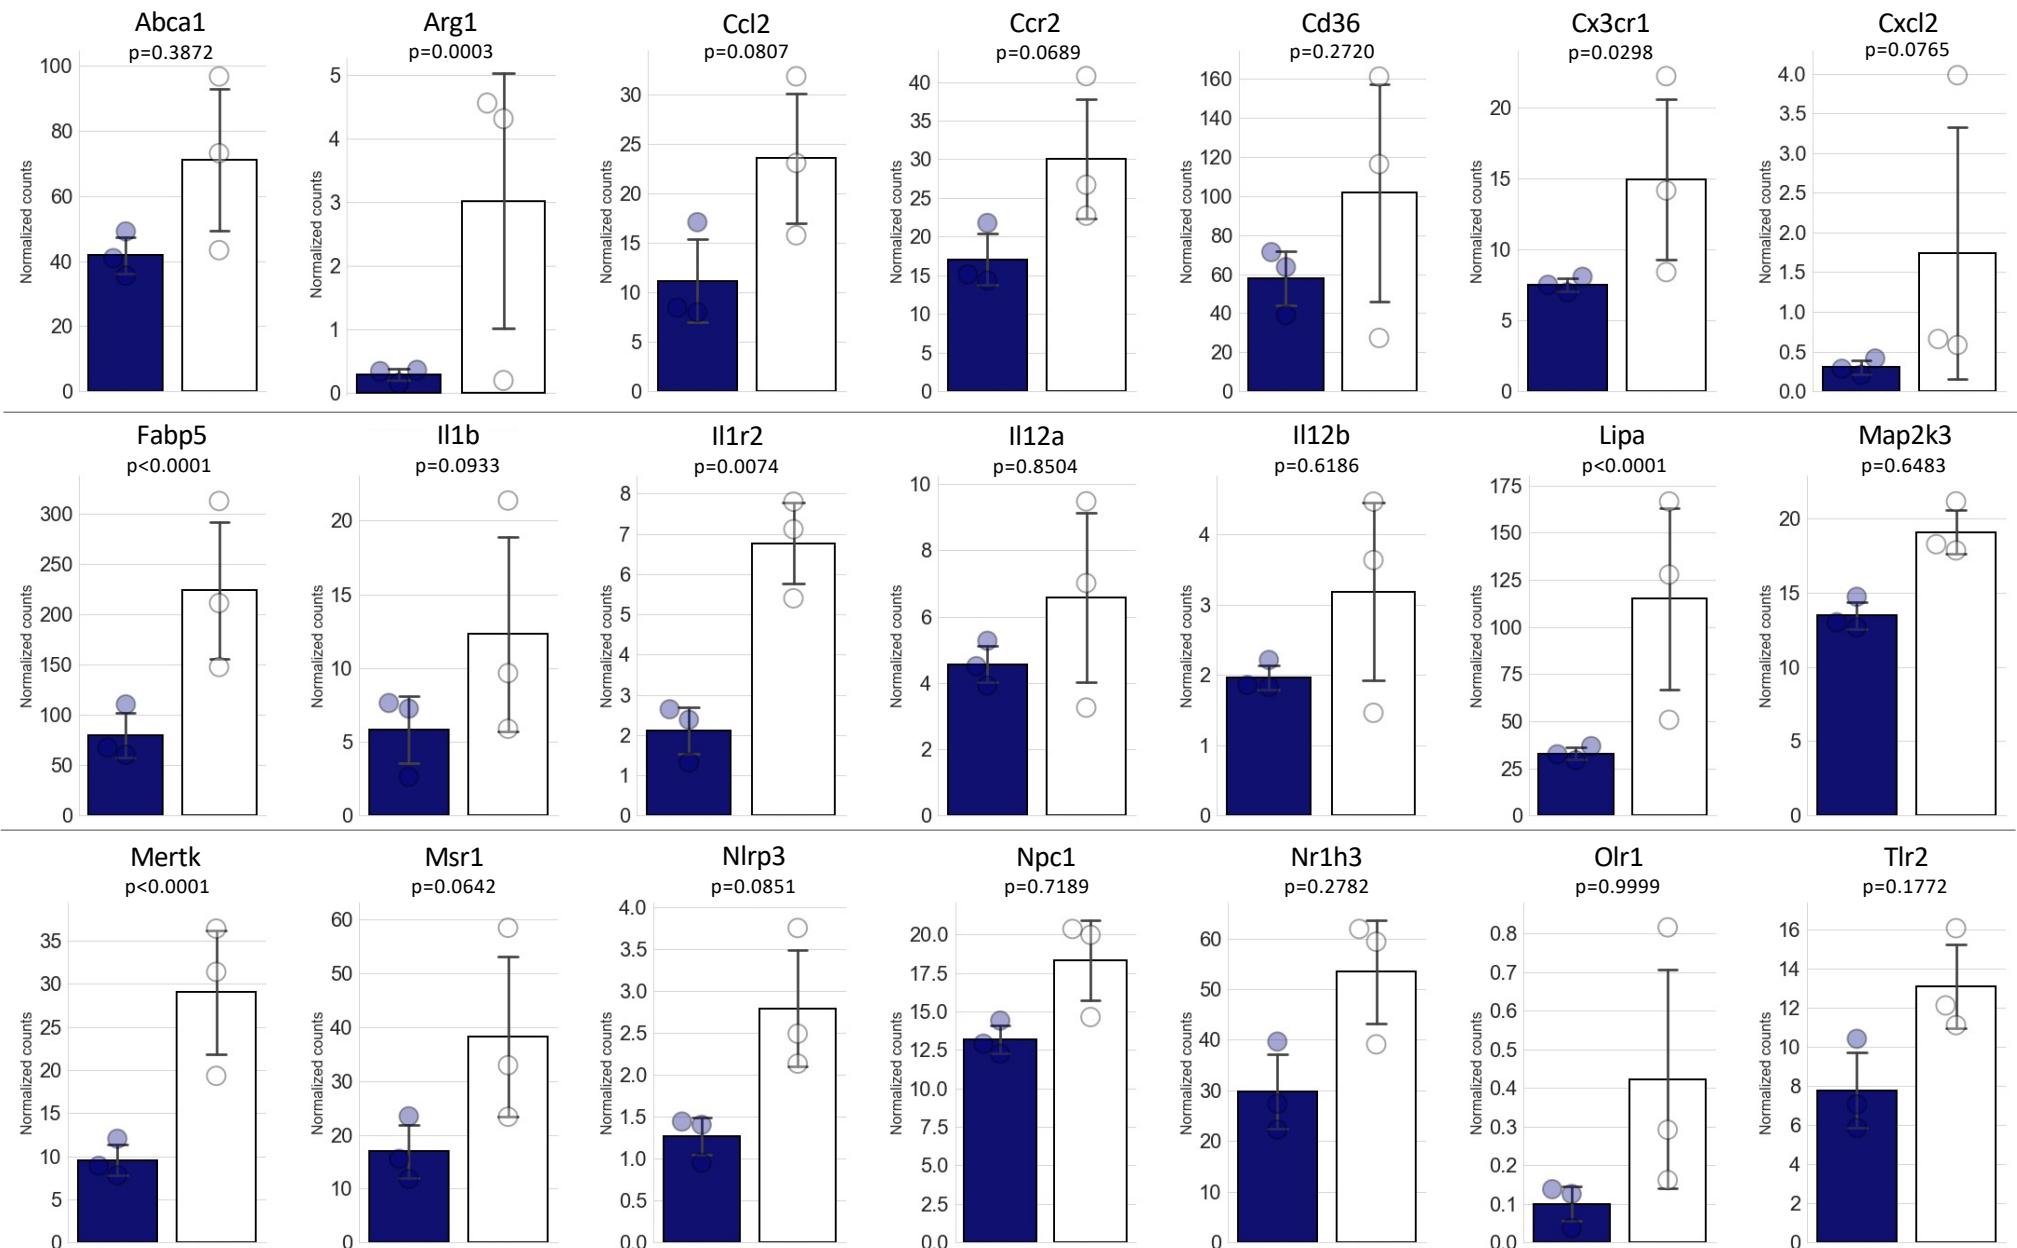

EKO/hA-I DKO

RNAseq expression levels (normalized counts) is charted for selected macrophage markers that show increased expression in DKO mice. Transcript abundance estimation and differential expression analyses were performed using the standard Bowtie-Tophat-Cuffdiff pipeline.

Figure S11

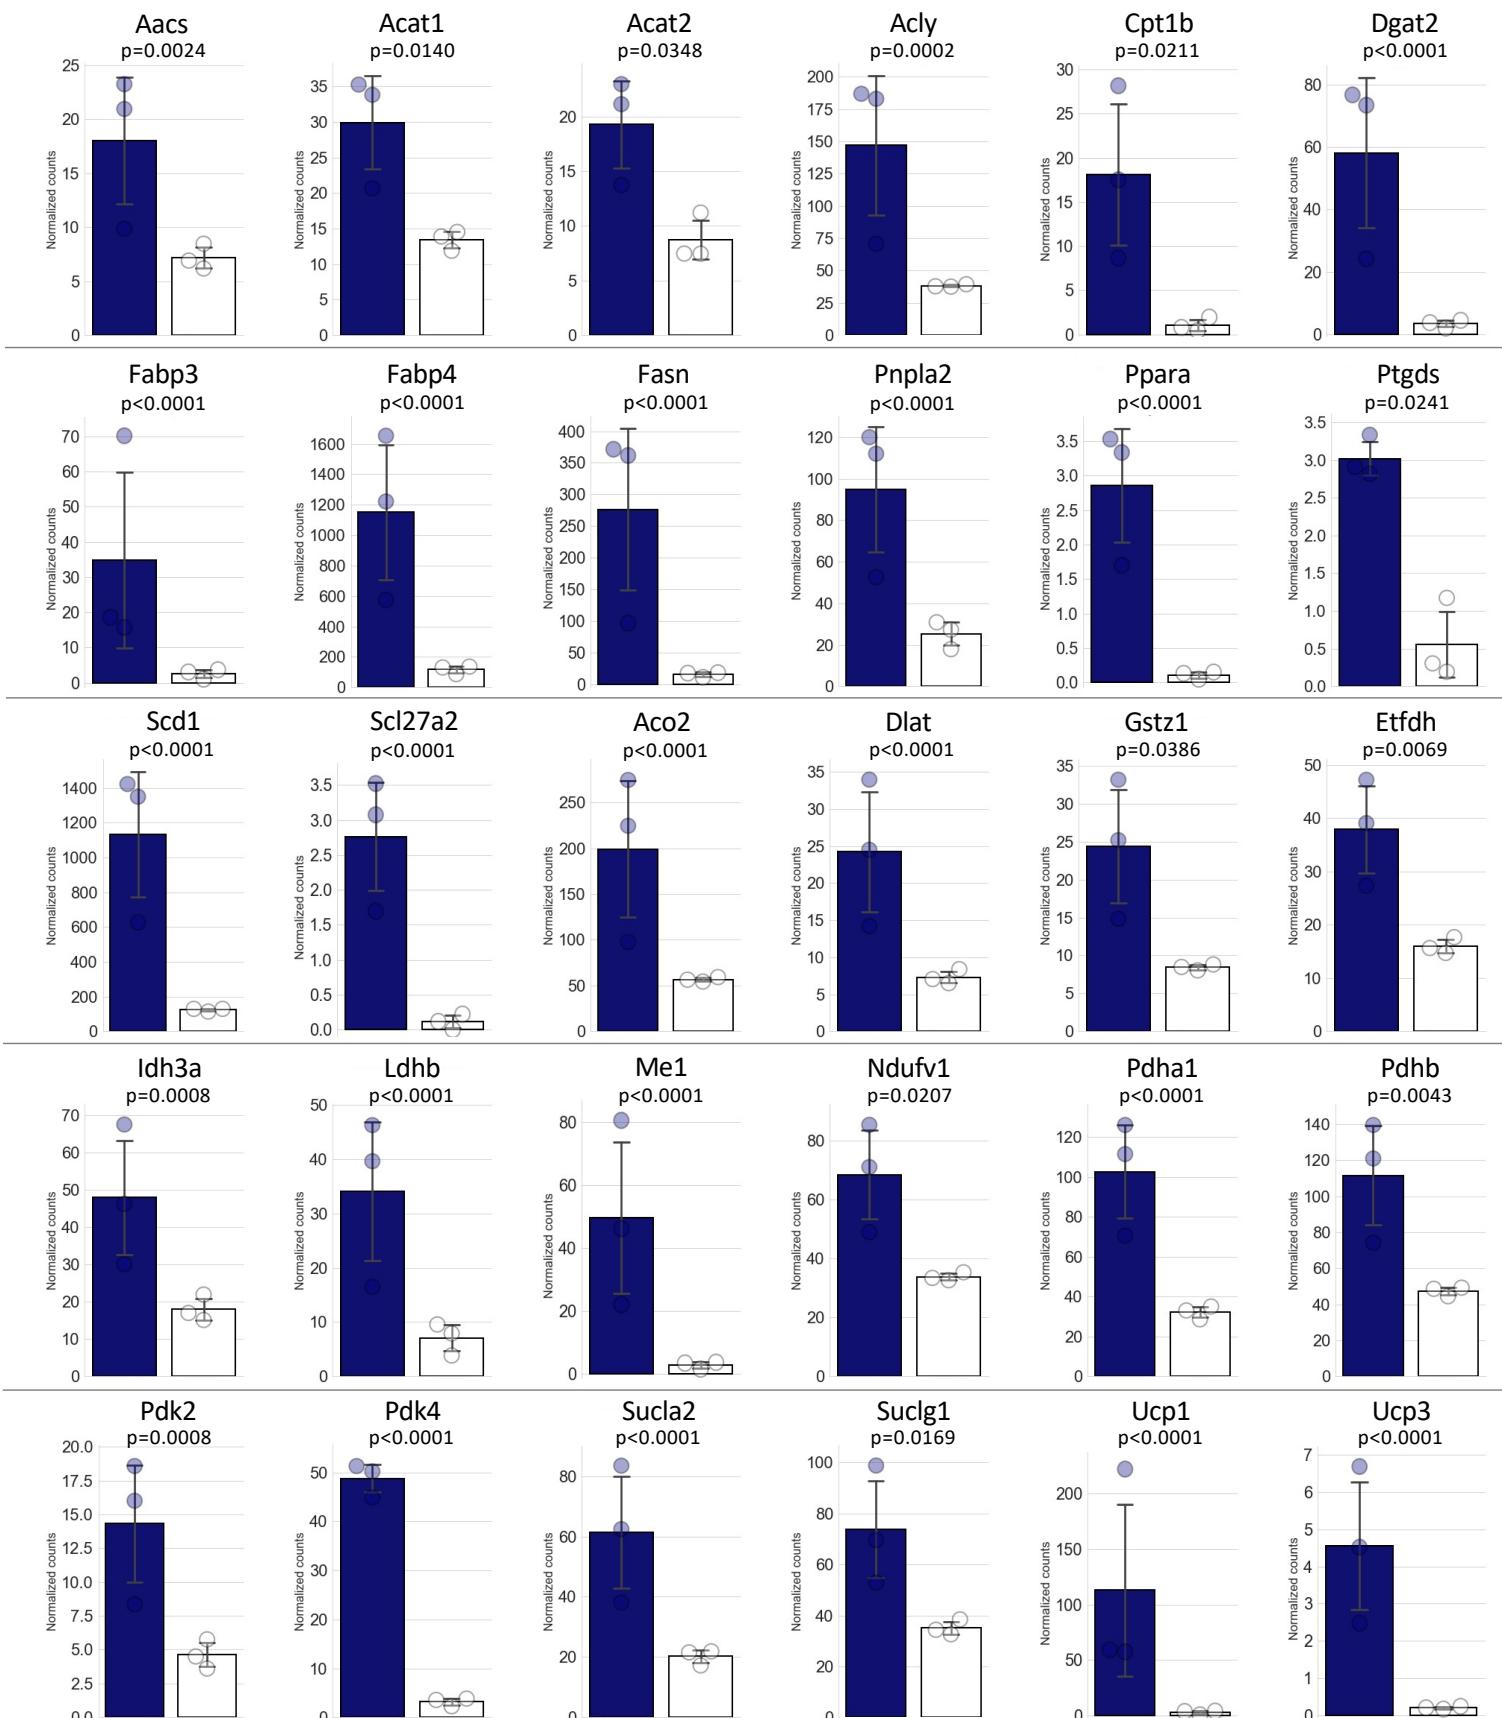

EKO/hA-I DKO

RNAseq expression levels (normalized counts) is charted for selected foam cell marker that show increased expression in DKO mice. Transcript abundance estimation and differential expression analyses were performed using the standard Bowtie-Tophat-Cuffdiff pipeline.

Figure S12

EKO/hA-I DKO

RNAseq expression levels (normalized counts) is charted for selected metabolic genes that show increased expression in DKO mice. Transcript abundance estimation and differential expression analyses were performed using the standard Bowtie-Tophat-Cuffdiff pipeline.

Figure S13

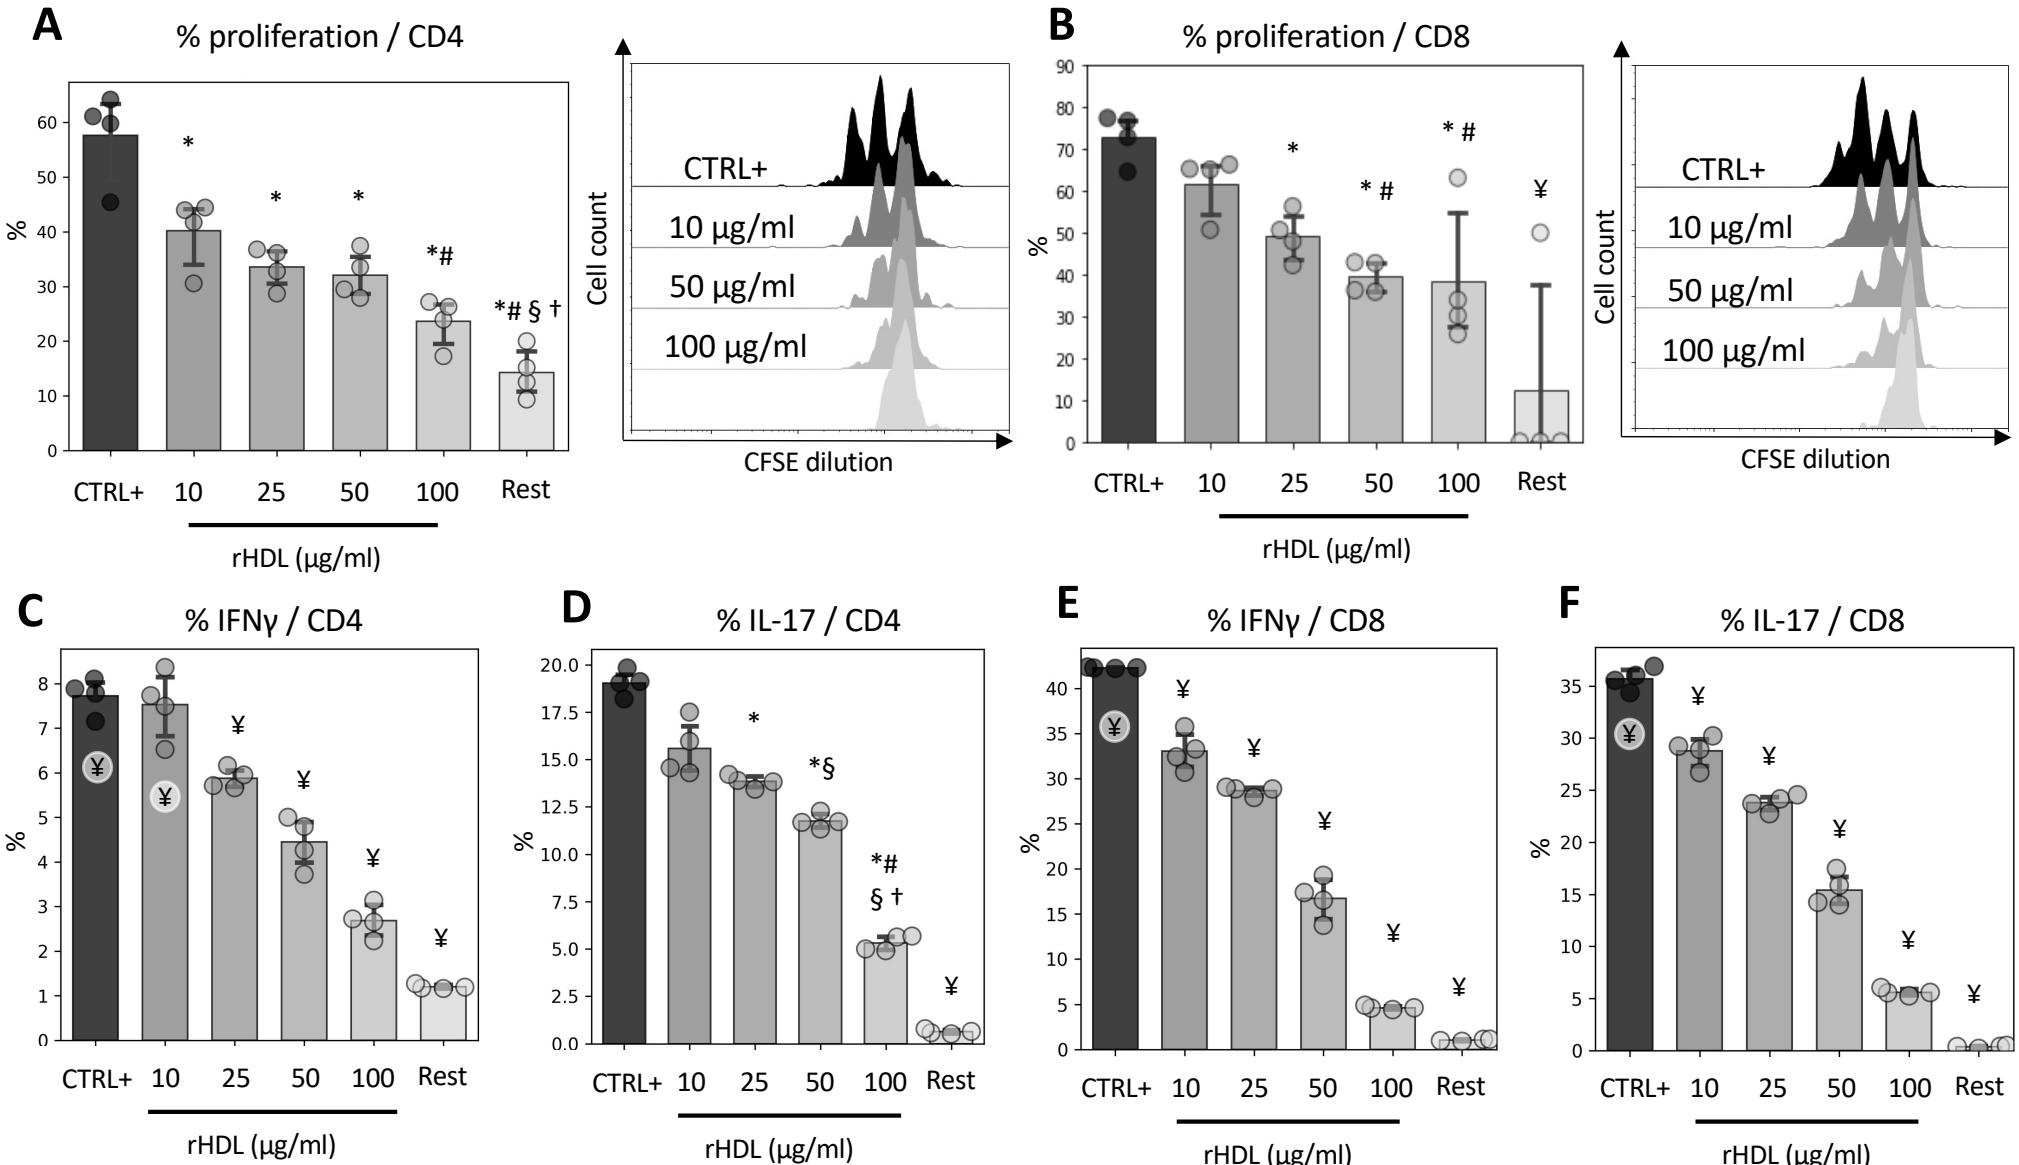

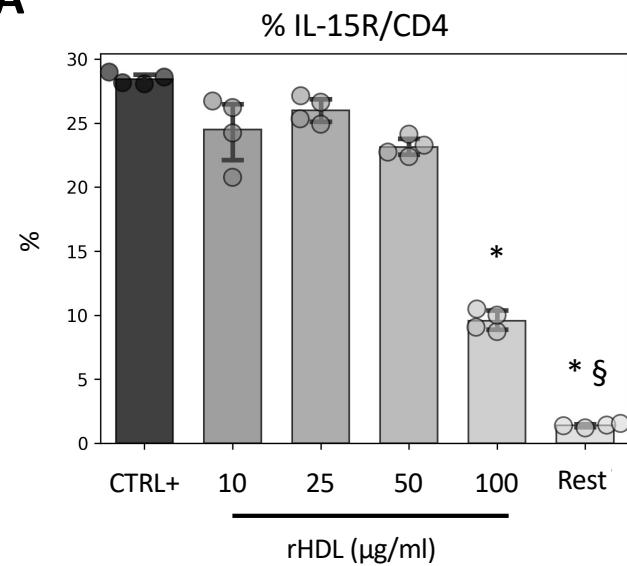

Figure 1. rHDL dampens T cell proliferation and cytokine production.

A-B: Impact of increasing concentration of rHDL (0, 10, 25, 50 and 100 $\mu\text{g}/\text{mL}$) on CD4+ and CD8+ T cell proliferation after 4 days of activation compared to resting (not stimulated sample). Representative histograms of CFSE dilution from flow cytometry analysis are shown.

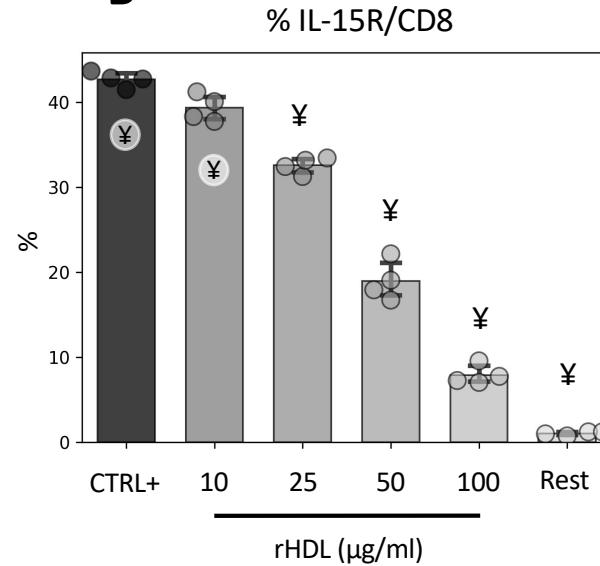

C-F: Percentage of activated CD4+ or CD8+ T cells from apoE KO mice expressing interferon γ (IFN γ) (CD4 Panel C, and CD8 Panel E) or IL-17 (CD4 Panel D, and CD8 Panel F) T following incubation with rHDL (0, 10, 25, 50 and 100 $\mu\text{g}/\text{ml}$). Data for resting (rest) T cells are also presented (last column of each graph). P < 0.05: * vs CTRL+; # vs 10; § vs 25; † vs 50; ‡ vs 100; ¥: vs everything else. Exact adjusted p-values are shown in Table S1.

Figure S14

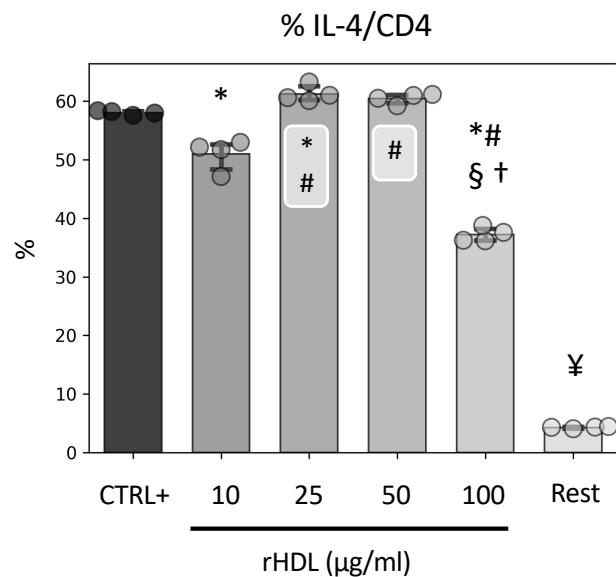

A

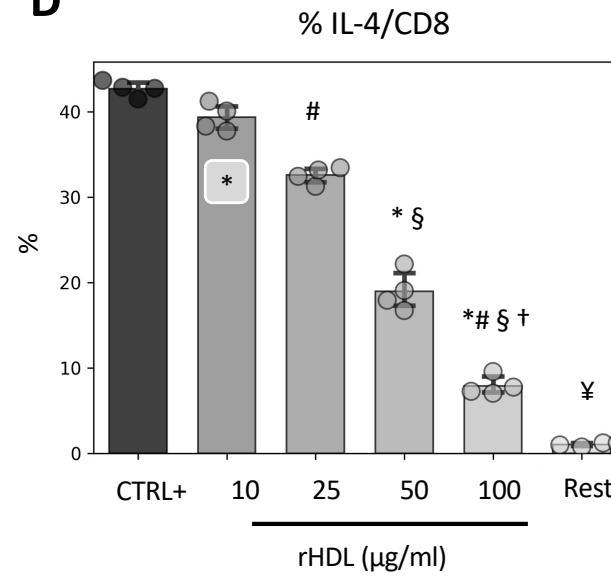

B

C

D

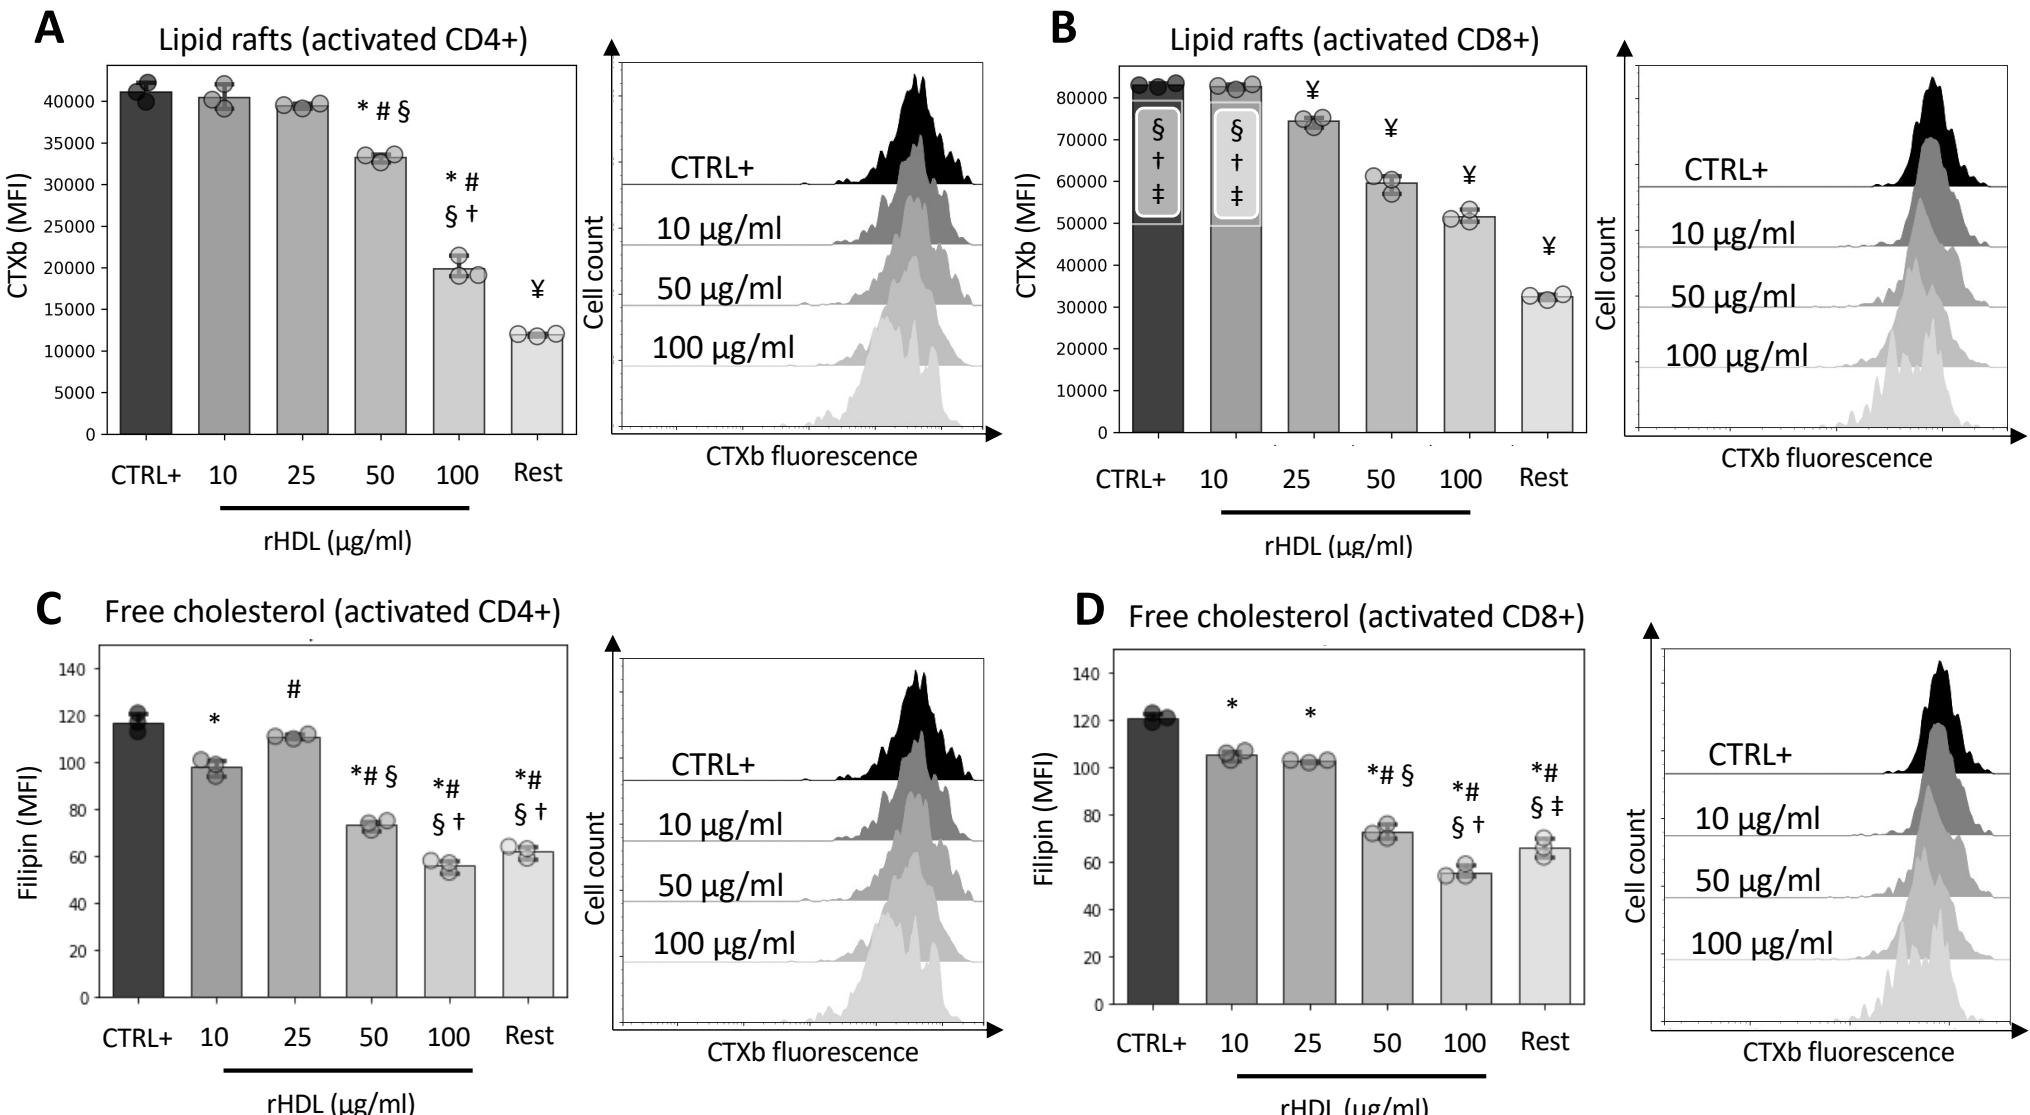

Impact of rHDL on IL15R and IL-4 production in T cells.

Percentage of activated CD4+ or CD8+ T cells from apoE KO mice expressing IL-15Ra, an indicator of IL-15 production as this interleukin is retained inside the cell and only secreted in complex with IL-15Ra, (CD4 Panel A, and CD8 Panel B) or IL-4 (CD4 Panel C, and CD8 Panel D) T following incubation with rHDL (0, 10, 25, 50 and 100 µg/ml). Data for resting (rest) T cells are also presented (last column of each graph).

P < 0.05: * vs CTRL+; # vs 10; § vs 25; † vs 50; ‡ vs 100; ¥: vs everything else. Exact adjusted p-values are shown in Table S1.

Figure S15

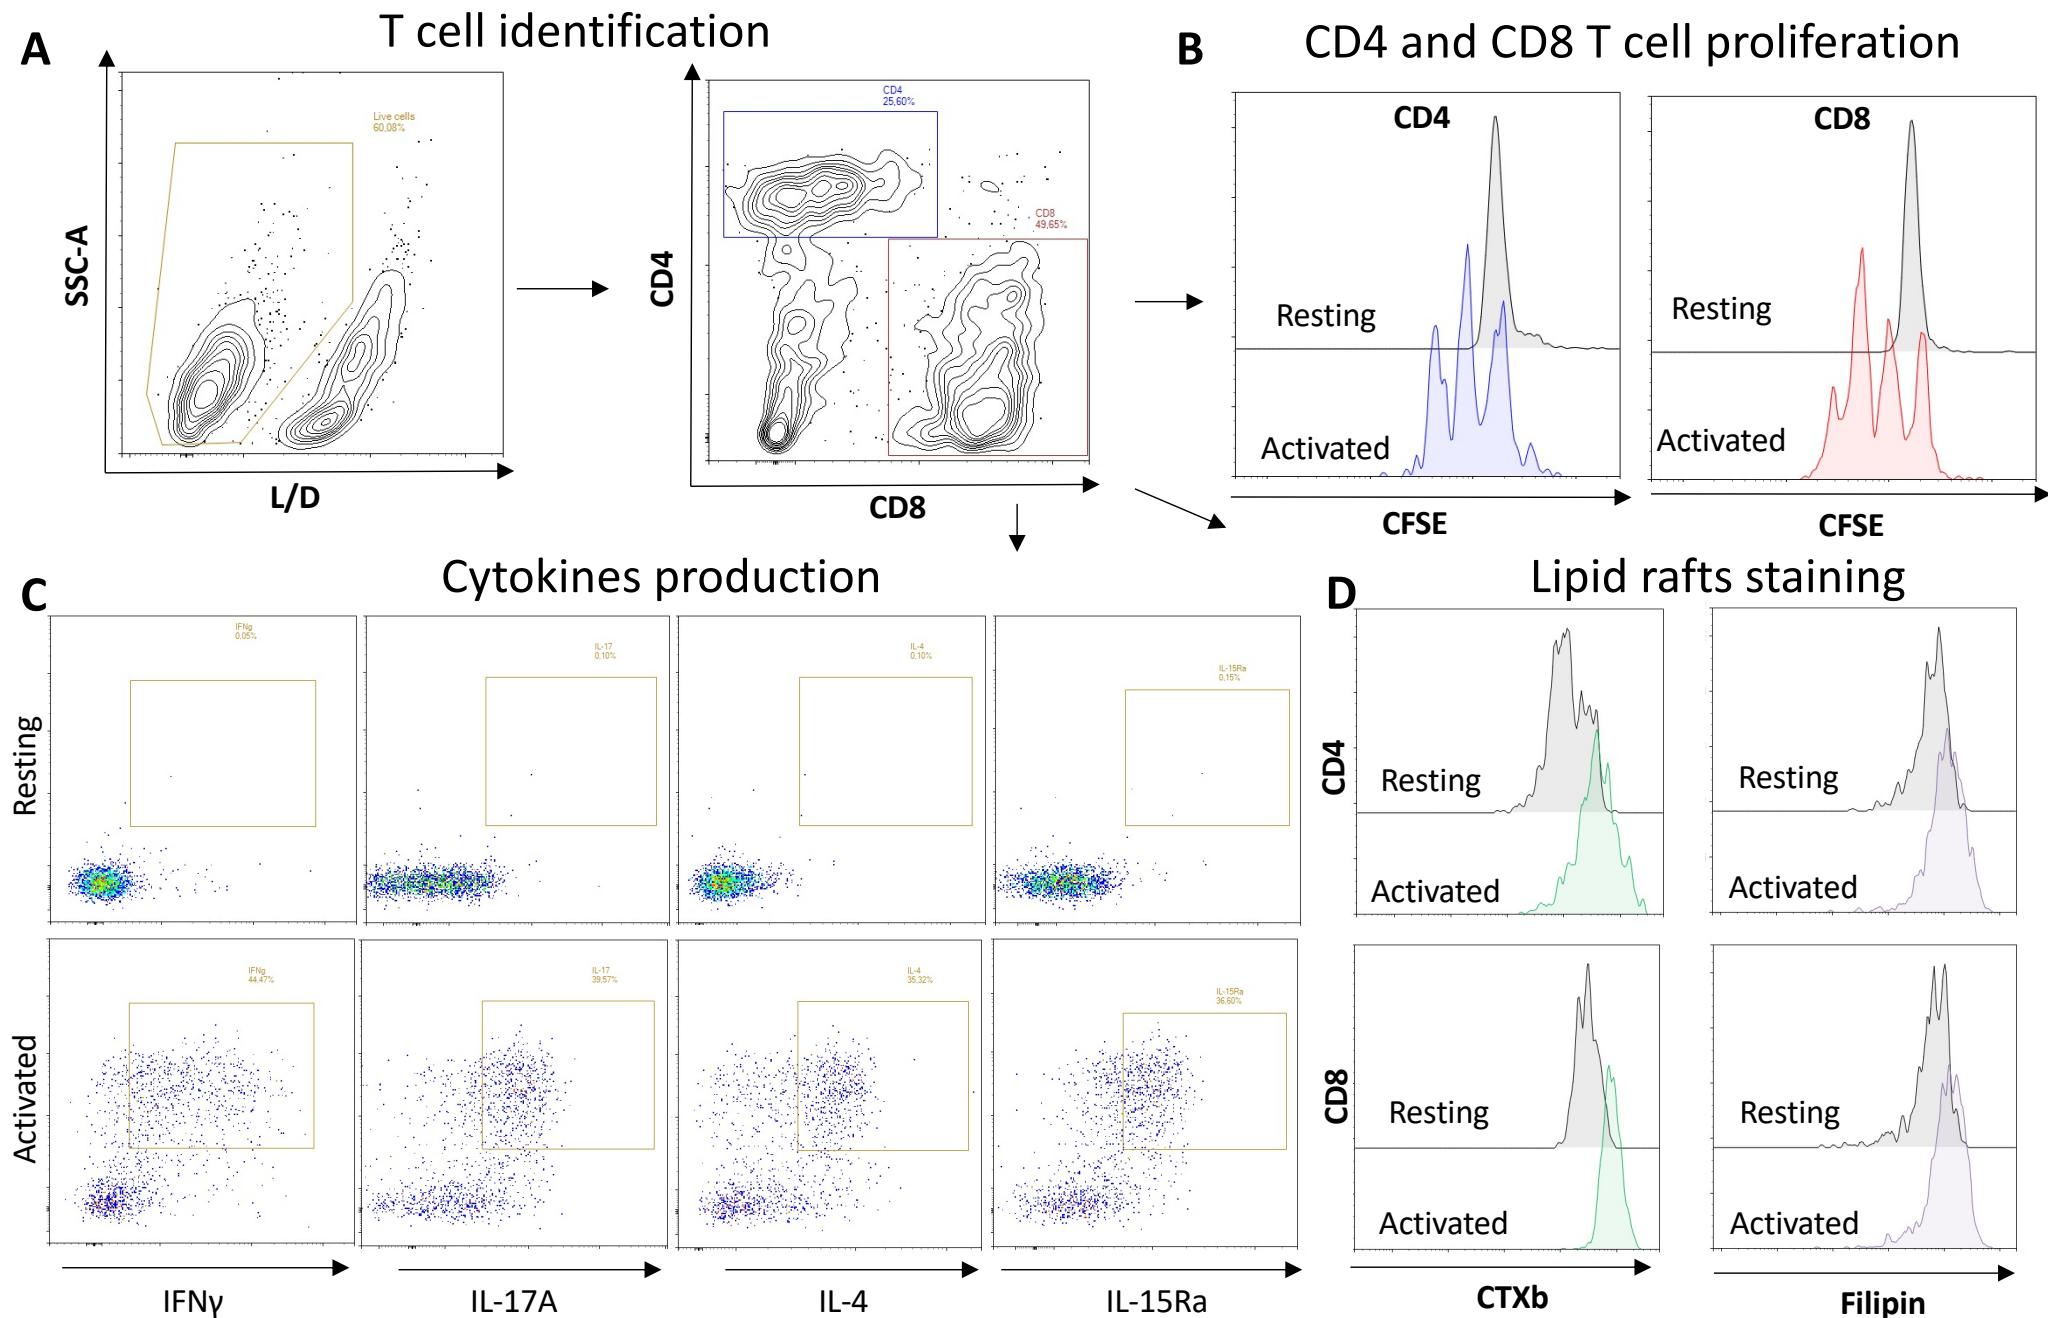

ApoA-I reduces lipid rafts and cholesterol abundance in T cells.

Cholera toxin-subunit B (CTXb, ligand of gangliosides enriched in lipid rafts) staining in activated CD4+ (A) and CD8+ (B) T cells from apoE KO mice following incubation with rHDL (0, 10, 25, 50 and 100 $\mu\text{g/ml}$). Data for resting (rest) T cells are also presented (last column of each graph). Representative histograms from flow cytometry analysis are shown.

Filipin staining (a marker of free cholesterol content) in activated CD4+ (C) and CD8+ (D) T cells from apoE KO mice following incubation with rHDL (0, 10, 25, 50 and 100 $\mu\text{g/ml}$). Data for resting (rest) T cells are also presented. Representative histograms from flow cytometry analysis are shown. MFI: mean fluorescence intensity. $P < 0.05$: * vs CTRL+; # vs 10; § vs 25; † vs 50; ‡ vs 100; ¥: vs everything else. Exact adjusted p-values are shown in Table S1.

Figure S16

Gating strategy for flow cytometry analysis. **A** - Live cells were discriminated as negative for live/dead staining and identified as CD4+ or CD8+ T cells; **B** - CD4+ and CD8+ T proliferation was evaluated by tracking CFSE dilution in resting and activated T cells; **C** - Cytokines production was detected by intracellular staining for IFN γ , IL-17A, IL-4 and IL-15Ra in resting and activated T cells; **D** - Stainings for Cholera toxin subunit B (CTXb) and filipin were performed in resting and activated CD4+ and CD8+ T cells.

Major Resources Table

In order to allow validation and replication of experiments, all essential research materials listed in the Methods should be included in the Major Resources Table below. Authors are encouraged to use public repositories for protocols, data, code, and other materials and provide persistent identifiers and/or links to repositories when available. Authors may add or delete rows as needed.

Animals (in vivo studies)

Species	Vendor or Source	Background Strain	Sex	Persistent ID / URL
mouse	The Jackson Laboratory	C57BL6/J	M	https://www.jax.org/strain/000664

Genetically Modified Animals

	Species	Vendor or Source	Background Strain	Other Information	Persistent ID / URL
	mouse	The Jackson Laboratory	C57BL6/J	Apoe ^{-/-}	https://www.jax.org/strain/002052
Parent - Male	mouse	Professor Chiesa's Lab	C57BL6/J	Apoe ^{-/-} Apoa1 ^{-/-}	
Parent - Female	mouse	Professor Chiesa's Lab	C57BL6/J	APOA1 ^{tg} Apoe ^{-/-} Apoa1 ^{-/-}
