

Appendix, Table 3: Oribatid mite species, their taxonomic affiliation, reproductive mode and geographic range (km²), their NCBI accession numbers and length of the 18S fragment used for the molecular phylogeny in this study. NCBI data were used to construct a solid family level molecular phylogeny based on all taxa listed in Appendix Table 2 to test for phylogenetic independence of geographic range among ori. Taxa kept for phylogenetic trait analysis (one species per monophyletic clade) are indicated by asterisks (*). Species from NCBI may deviate from taxa used for our study, but represent the same genus or family.

Oribatid mite species	Oribatid mite species downloaded from NCBI, deviating from Table 2	Taxon
<i>Aphelacarus acarinus</i> (Berlese, 1910)		Palaeosomata
<i>Ctenacarus aranaeola</i> (Grandjean, 1932)*		Palaeosomata
<i>Palaeacarus hystricinus</i> Trägårdh, 1932*		Palaeosomata
<i>Brachychthonius berlesei</i> Willmann, 1928*	<i>Brachychthonius bimaculatus</i> *	Enarthronota
