

Supplementary Information: Flood exposure and poverty in 188 countries

Jun Rentschler^{1,2*}, Melda Salhab^{1,3}, Bramka Arga Jafino^{4,5}

Supplementary Note 1. Stepwise computational process

The following steps are repeated for each subnational region where data is available.

Merge coastal, pluvial, fluvial flood hazard maps (Supplementary Figure 1.)

- Crop fluvial and pluvial flood rasters to subnational (admin-1) boundary
- Crop and then virtually warp the coastal flood raster, using a nearest neighbors resampling method, to perfectly match the resolution and extent of the fluvial and pluvial rasters
- Merge fluvial, pluvial, and coastal rasters using a maximum value method

Coastal				Pluvial				Fluvial				Combined Flood Hazard			
0	0	0	0.1	1.2	0	0	0	1.6	0.9	0	0	1.6	0.9	0	0.1
0	0	0	0.12	0.8	0	0	0	0.6	0.02	0	0	0.8	0.02	0	0.12
0	0	0	1.6	0.4	0	0	0	0	0	0	0	0.4	0	0	1.6
0	0	0.7	999	0.14	0	0	0	0	0	0	0	0.14	0	0.7	999

Supplementary Figure 1. Merger of three flood layers

Categorize the flood raster (Supplementary Figure 2.)

- Using the pre-defined flood categories and a category for water bodies, categorize the value of each pixel

Combined Flood Hazard				Categorized			
1.6	0.9	0	0.1	4	3	0	1
0.8	0.02	0	0.12	3	1	0	1
0.4	0	0	1.6	2	0	0	4
0.14	0	0.7	999	1	0	3	5

Supplementary Figure 2. Flood risk categorization

Convert to Boolean integer raster (Supplementary Figure 3.)

- Convert the country raster into six different rasters, one for each flood bin
- Convert each raster for each flood bin to a Boolean (true / false) integer array, where 1 represents the presence of flood risk level in the specific pixel, and 0 represents no presence of flood risk for that pixel

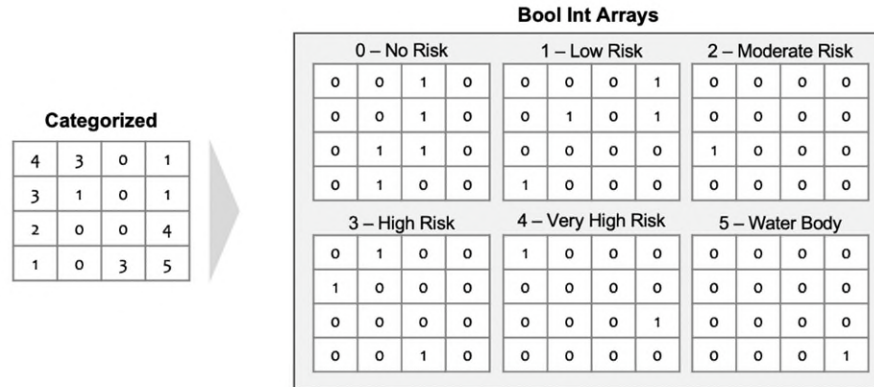

¹ The World Bank, Washington DC, USA

² Payne Institute for Public Policy, Denver, USA

³ Center for Advanced Spatial Analysis, University College London, London, UK

⁴ Deltares, Delft, The Netherlands

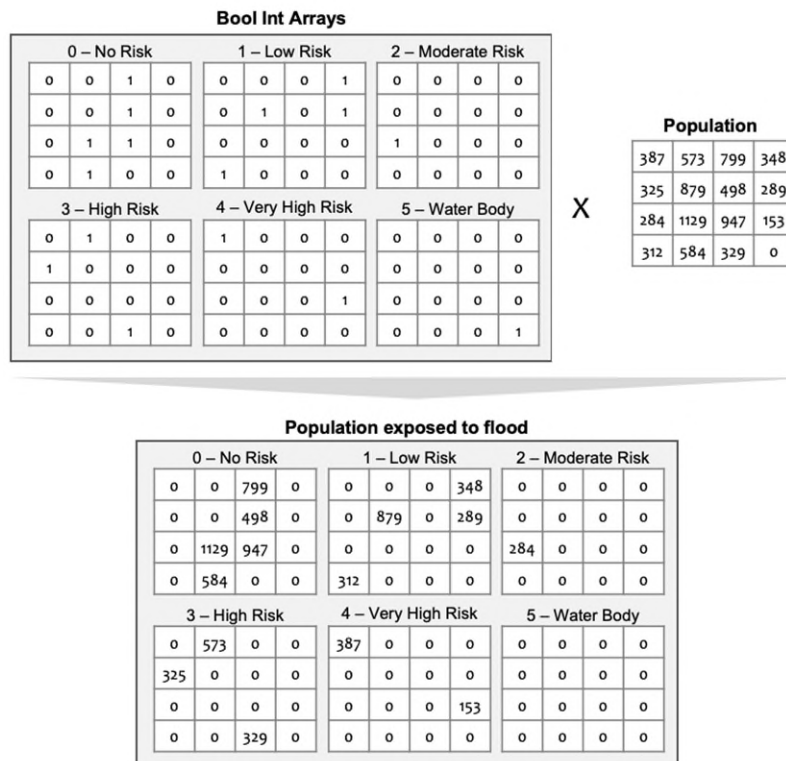

⁵ Faculty of Technology, Policy, and Management, Delft University of Technology, Delft, The Netherlands

Supplementary Figure 3. Separating flood categories

Multiply each flood array by the population array (Supplementary Figure 4.)

- Crop and virtually warp the population raster to perfectly match the flood raster
- For each flood risk array, multiply the array by the population
- Each flood array pixel is multiplied by the corresponding population array pixel
- The 1/0 structure allows the resulting array to capture population data for the specific flood risk level

X

Population			
387	573	799	348
325	879	498	289
284	1129	947	153
312	584	329	0

Supplementary Figure 4. Overlay of flood risk and population layers

Calculate sums

- For each flood risk array, calculate the total number of people exposed and add the results to the World Bank global administrative map shapefile

Supplementary Note 2. Sensitivity of results to threshold choice

Supplementary Figure 5. shows the number of people who are exposed to pluvial, fluvial, or coastal flooding of at least a certain inundation depth during a 1-in-100 year event. Headcount estimates for the exposure to pluvial flooding are most sensitive to threshold changes. The sensitivity of coastal flood exposure does not significantly affect the overall exposure headcount estimates (from 165 million people when threshold is set at 15 cm to 132 million people with a threshold of 100 cm). Note that locations are often exposed to more than one flood type, hence summing exposure headcounts of individual flood types would result in double counting.

Supplementary Figure 5. Sensitivity analysis of global flood exposure to individual flood types

Supplementary Note 3. Country level summary results

Supplementary Table 1. Exposure headcount estimates at the country level

		Total population	Population exposed to high flood risk		Population exposed to high flood risk and poor (\$1.9 per day)		Population exposed to high flood risk and poor (\$3.2 per day)		Population exposed to high flood risk and poor (\$5.5 per day)	
		('000)	Total ('000)	% of population	Total ('000)	% of population	Total ('000)	% of population	Total ('000)	% of population
