

Fig S7

Expression Level of the HAP complex During Mating

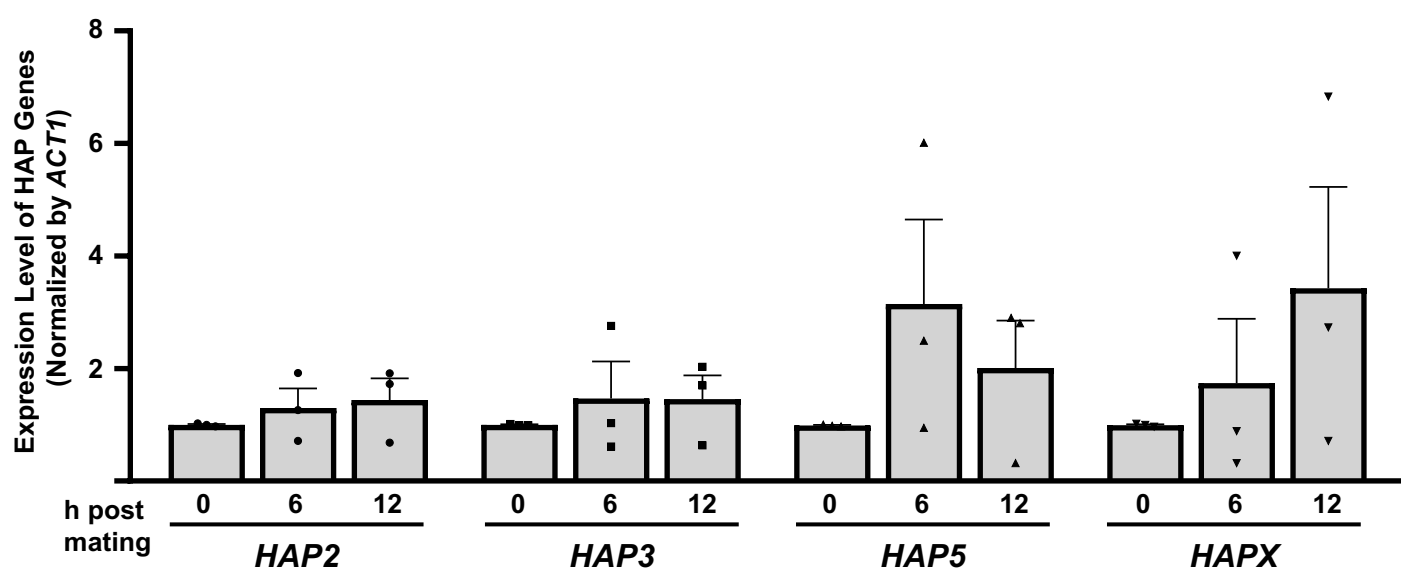

Fig S7. Transcriptional regulation of the HAP complex during mating.

The α (H99) and a (YL99) strains were cultured in liquid YPD medium at 30°C overnight. The cells were co-incubated for 0, 6, and 12 h on V8 medium and scraped at the corresponding time points. The expression of each HAP complex gene was examined using qRT-PCR by normalizing the gene expression levels with *ACT1*.
