SNPs were selected by pairwise tagging from EUR population of *The 1000 Genome project*. The selected region was chr 6_129949823-130205324 from hg38. The 6 Tag-SNPs captured 86 markers with $r^2 \geq 0.7$ (mean $r^2 = 0.946$) and a minor allele frequency (MAF) ≥ 0.1

Supplementary Figure 1.
 Location of the tagged SNPs at the *L3MBTL3* locus.

Supplementary Figure 2. Linkage disequilibrium (LD) plot of the SNPs of the *L3MBTL3* locus. Only the SNPs of the region that have been reported associated with a trait by GWAS are represented. Data obtained from GWAS catalogue (<https://www.ebi.ac.uk/gwas/>). LD in r^2 and the data used was EUR population from The 1000 Genomes project. Haploview (<https://www.broadinstitute.org/haploview/haploview>) was used to perform calculations and depict the figure. In red are indicated the SNPs studied in the present article.
