

Description of Additional Supplementary Files

File Name: Supplementary Data 1

Description: Adjusted relative risk estimates, 95% confidence intervals, and number of outcomes from GEE analysis of 6-week-old infant stool 16S V4-V5 rRNA sequencing alpha diversity and infections and symptoms of infection over the first year of life

File Name: Supplementary Data 2

Description: Adjusted relative risk estimates, standard error, and p-value of the number of infections and symptoms over the first year of life in relation to 6-week metagenomics species relative abundance

File Name: Supplementary Data 3

Description: Adjusted relative risk estimates and 95% confidence intervals of metagenomics species associated with the number of infections and symptoms of infections in the first year of life
