

Supplementary Figure 3: Radiation Enriched Proteins.

Scatter plot showing the fold change of the DU145-HF cell lines (as compared to DU145-PAR) and the DU145-CF cells (as compared to DU145-PAR). Circles represent proteins with a p -value < 0.05. Lower left quadrant and upper right quadrant (representing radiation resistant downregulated and upregulated proteins, respectively) are highlight and were used as the input data for Figure 4.A.
