

Fig. S4. (A and B) Combined effects of antibodies against gC1qR, integrin α v β 3, and integrin α v β 5 on the endocytosis (A) and cell association (B) of *C. glabrata*. Data are the mean \pm SD of 3 experiments each performed in triplicate. HI, heat-inactivated; Orgs/HPF, organisms per high power field; ns, not significant; ** $P < 0.01$; **** $P < 0.0001$ by ANOVA with the Dunnett's test for multiple comparisons.
