### **Supplementary Table 3. Definition of local and systemic complication adapted from the revised Atlanta classification**

Collection	Time after onset of pain (week)	Imaging features
APFC	≤4	Homogeneous, fluid attenuation, conforms to retroperitoneal structures, no wall
ANC	≤4	Inhomogeneous, non-liquified components, no wall
Pseudocyst	>4	Homogeneous, fluid filled, circumscribed, encapsulated with wall

*Criterion for local pancreatic complications (Banks et al., 2012; Foster et al., 2016)*

*APFC: acute peripancreatic fluid collection, ANC: acute necrotic collection*

Organ system	Score 0	Score 1	Score 2	Score 3	Score 4
Respiratory (PaO <sub>2</sub> /FIO <sub>2</sub> )*	>400	301-400	201-300	101-200	≤100
Renal: serum creatinine (μmol/L)**	<134	134-169	170-310	311-439	>439
Heart: systemic blood pressure***	>90	<90, responsive to fluid resuscitation	<90, not responsive to fluid resuscitation	<90 with pH <7.3	<90 with pH <7.2

*Criterion for systemic complications – Modified Marshall Scoring system (Banks et al., 2012; Foster et al., 2016)*

Note: a score 2 or higher indicates organ failure

\* If partial pressure of oxygen/fraction of inspired oxygen, or PaO<sub>2</sub>/FIO<sub>2</sub> was not available, patients with oxygen therapy was considered as having respiratory failure.

\*\* In the case of chronic kidney disease, further deterioration was considered as acute renal failure.

\*\*\* Besides, patients with vasopressor therapy was considered as having heart failure.
