

Supplementary Material

Supplementary Figure 1. The Bland Altman plot (after log10 transformation).

A scatter plot showing the differences between LOS in the ICU and hospital admission plotted against the mean of these two measurements. Values which lie within ± 1.96 SD (green lines) of the mean (red line) are considered to be in agreement. The mean differences in LOS prediction for all patients was (0.09, SD 0.16); the prediction upper limit = 0.42 and lower limit = -0.23.
