

Supplementary data for

Lemp JM, Nuthanapati Prasad M, Bärnighausen TW, Vollmer S, Geldsetzer P, Anant J. Use of lifestyle interventions in primary care for individuals with newly diagnosed hypertension, hyperlipidemia, or obesity: a retrospective cohort study.

Box S1. Search method for lifestyle intervention codes

We primarily identified codes for lifestyle intervention in CPRD Aurum by searching the “Term” variable of the complete medical code lists from the July 2020 release. The search terms were created by JLM and AJ and are partially informed by previous publications using electronic health records for lifestyle intervention research¹⁻³.

Search terms

- a. “lifestyle” OR “program” OR “advice*” OR “educat*” OR “counsel*” OR “information” OR (“intervention”) OR “signpost*” OR “management” OR “club”
- b. “reduc*” OR “loss” OR “intake”
- c. “exercise” OR “physical” OR OR “weight” OR “obes*” OR “hypertens*” OR “cardiovascular” OR “diet*” OR “eat*” OR “nutri*” OR “food”

This string-based, case-insensitive algorithm was implemented in R. Two researchers of our team independently assessed the terms for inclusion and results were subsequently compared.

Additional resources reviewed

To make sure that we have included all relevant terms in our search, we performed a “backwards search” with SNOMED concepts IDs (<https://snomedbrowser.com>).

Non-binary/unknown	< 0.1	41	< 0.1	10	< 0.1	7	< 0.1	2

Table shows characteristics of patients who had a recorded medication prescription (regardless of their diagnosis status).

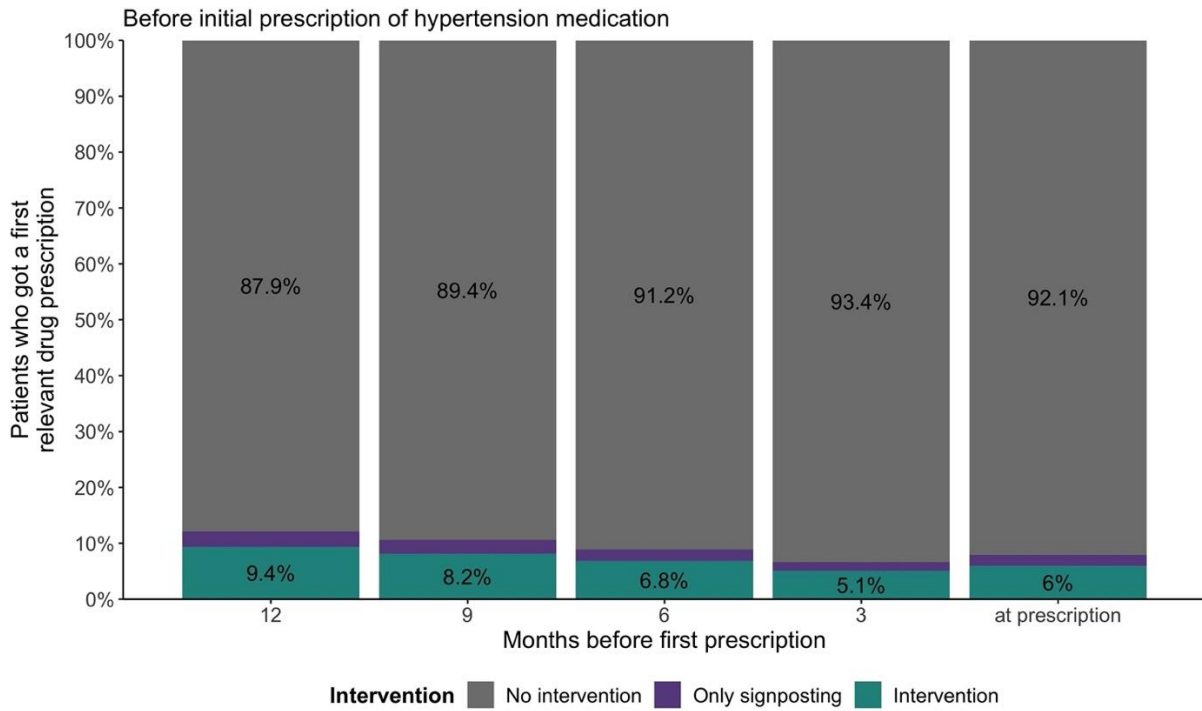

^a Age in years at time of the first recorded medication prescription.

^b Diagnosis codes specified in Supplementary Table 1.

^c Diagnosis codes specified in Supplementary Table 1 and 2.

Figure S1. Lifestyle intervention before initial prescription of blood pressure- or lipid-lowering medication (diagnosed and undiagnosed)

A. Hypertension medication

B. Hyperlipidemia medication

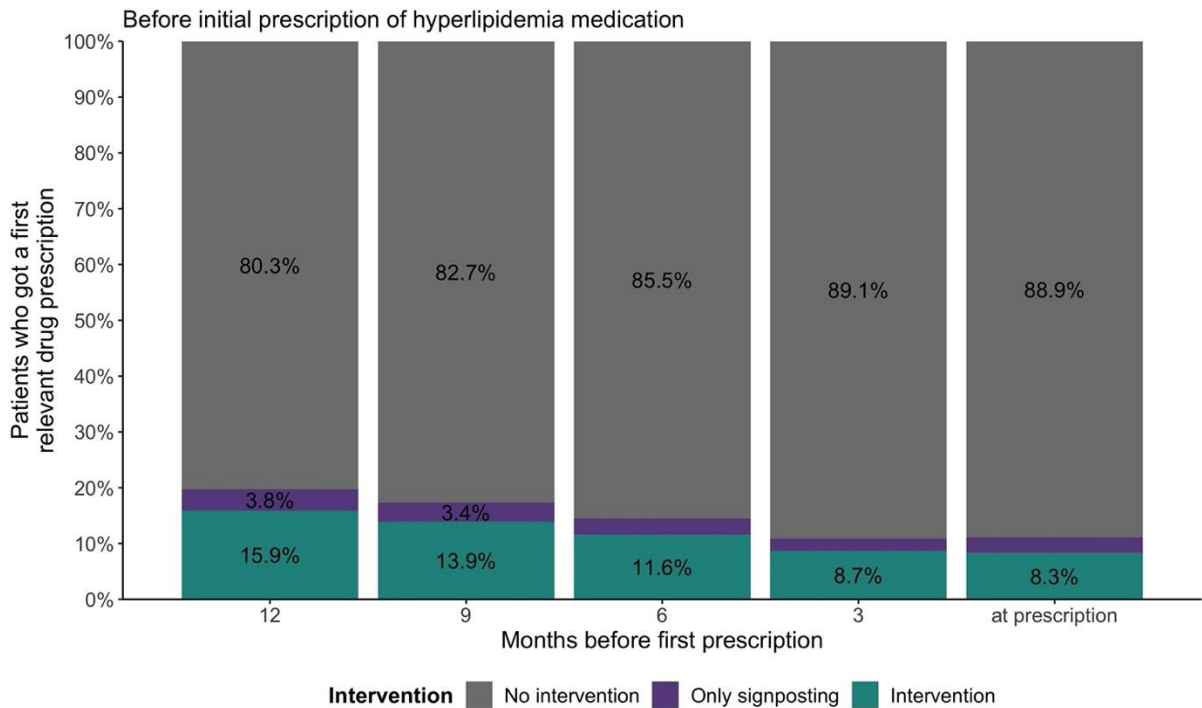

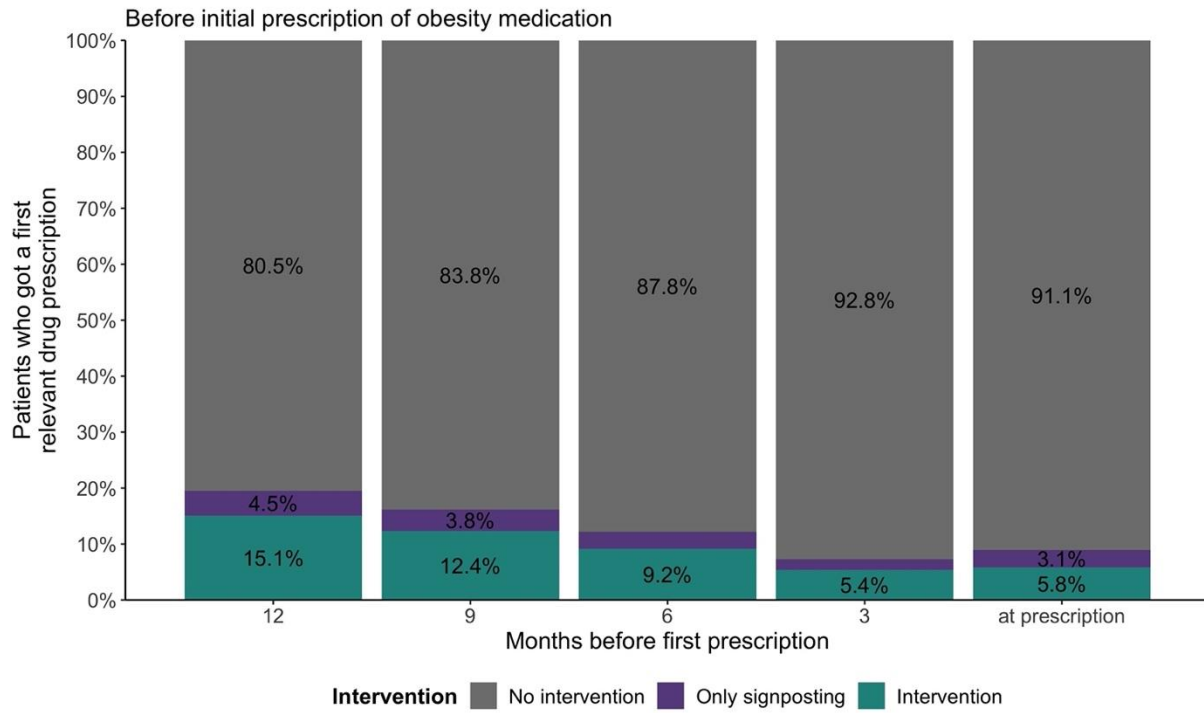

Figure S2. Lifestyle intervention before initial prescription of anti-obesity or Orlistat medication (diagnosed and undiagnosed)

A. Anti-obesity medication (all)

B. Anti-obesity medication (Orlistat only)

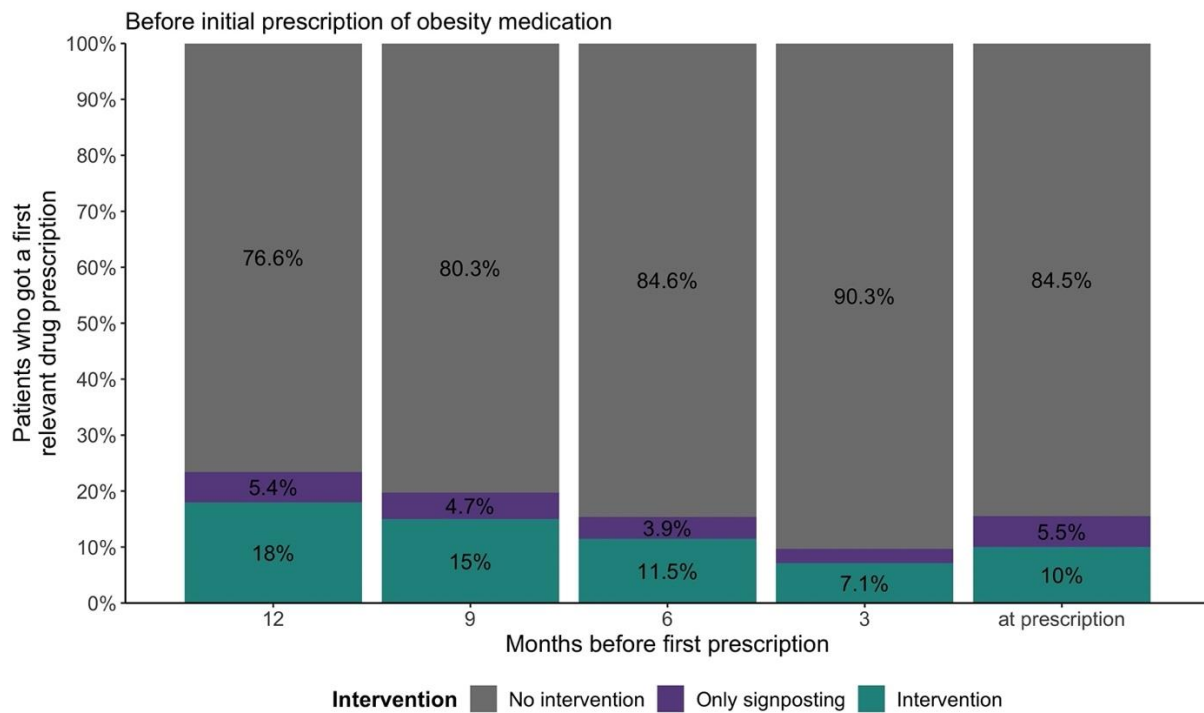

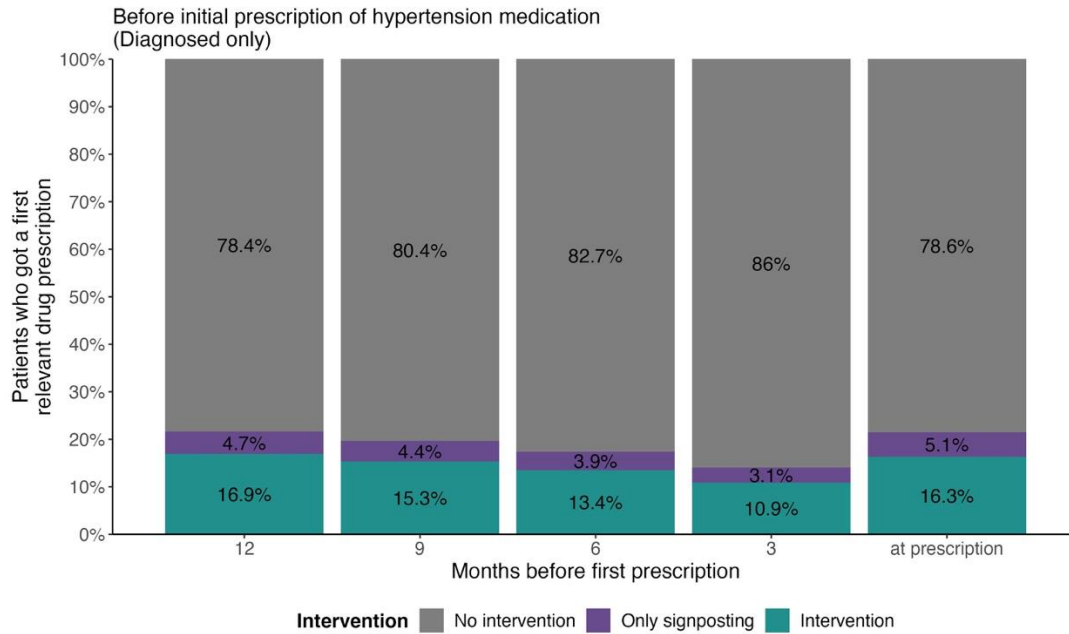

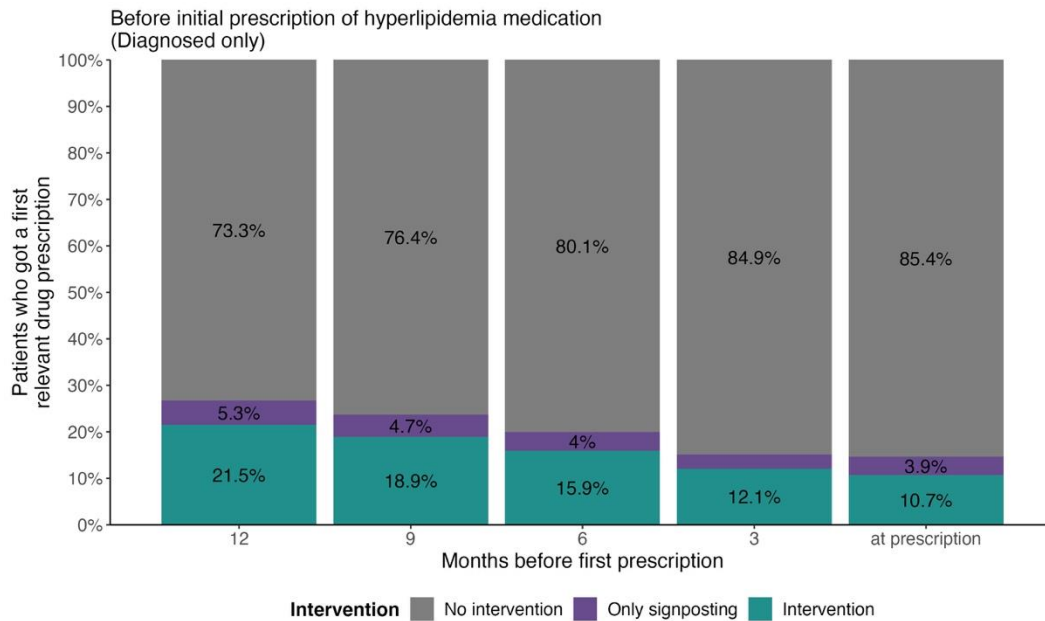

Figure S1. Lifestyle intervention before initial prescription of blood pressure- or lipid-lowering medication (diagnosed only) ^a

A. Hypertension medication

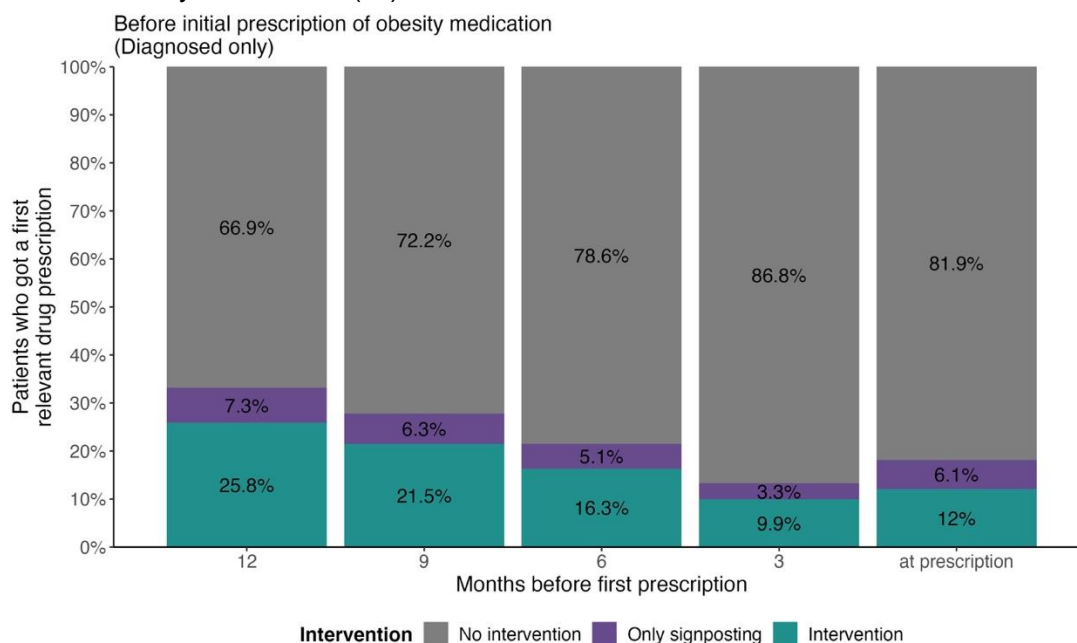

B. Hyperlipidemia medication

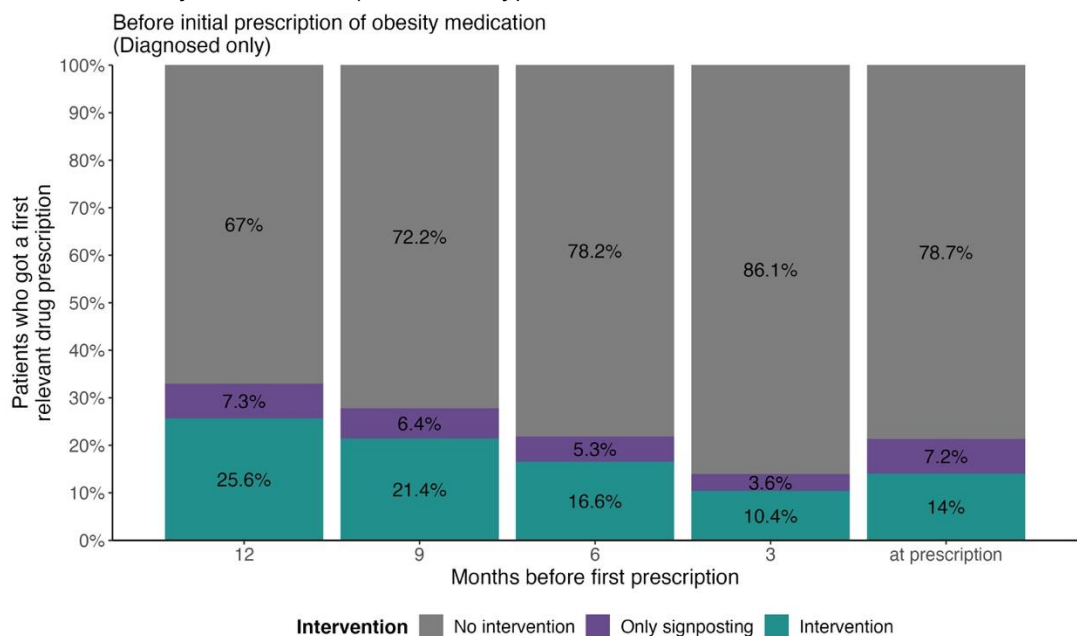

^a Diagnosed based on strict diagnosis codes that must have been recorded before or at first recorded condition-specific medication prescription. Hypertension medication and diagnosed, n = 472 244, Hyperlipidemia medication and diagnosed, n = 75 443

Figure S2. Lifestyle intervention before initial prescription of anti-obesity or Orlistat medication (diagnosed only) ^a

A. Anti-obesity medication (all)

B. Anti-obesity medication (Orlistat only)

^a Diagnosed based on strict diagnosis codes that must have been recorded before or at first recorded condition-specific medication prescription. Anti-obesity medication and diagnosed, n = 52 808. Orlistat only and diagnosed, n = 44 451.
