

SUPPLEMENTARY FIGURE LEGENDS

Sup. Fig. 1. Validation of the *Avil* icKO and *Rosa26* icKO mice. (A) Prdm12 immunostaining performed one month after tamoxifen injection showing loss of Prdm12 in a DRG of a TAM-injected *Avil* icKO containing a Cre dependent tdTomato reporter gene (*Avil*^{CreERT2}; *Rosa26*^{Ai14}; *Prdm12*^{f/f}) compared to a control DRG (*Avil*^{CreERT2}; *Rosa26*^{Ai14}; *Prdm12*^{f/+}) and quantification showing reduction of Prdm12⁺/tdTomato⁺ cells in DRG of *Avil* icKO mice. (B) Double immunostaining for Prdm12 and Peripherin on a DRG of a *Rosa26* icKO (TAM injected *Rosa26*^{CreERT2}/*Rosa26*^{CreERT2}; *Prdm12*^{f/f}) and of a control mice (*Prdm12*^{+/+}) and quantification showing reduction of Prdm12⁺ cells in DRG of mutant mice.

Sup. Fig. 2. Gene ontology and KEGG pathway analysis of the 71 DEGs identified in DRG of both icKO models. (A) Gene ontology analysis based in all categories indicating the 6 most enriched subclassifications. (B) KEGG pathway analysis indicating the 3 most enriched pathways. (C) Genes deregulated in the neuroactive ligand-receptor interaction pathway, in red the upregulated ones and in green the downregulated ones.

Sup. Fig.3. Validation by RT-qPCR of some of the identified DEGs identified in DRG of *Rosa26* icKO *, **, ***, and **** indicate respective p values <0,05, <0,01, <0,001, and <0,0001 (Student's t-test, $\alpha = 0,05$).

Sup. Fig. 4. Conditional knockout of *Prdm12* in adult mice does not alter their locomotor activity. (A) *Rosa26* icKO (n=10) and control mice (n=12) travel the same distance and spent the

same time moving in the open field device. (B) *Rosa26* icKO (n=10) and control mice (n=11) spent the same time to cross the same distance in the beam walking test. Values are means ± SEM. (C) Time course of the nocifensive response (licking time in seconds) of *Rosa26* icKO (n=15) and control mice (n=16) until 30 min after formalin injection. Response of individual *Rosa26* icKO and control mice in the first (0-5min post-formalin injection) and second phase (15-30min post-formalin injection) is shown on the right. Note that *Rosa26* icKO mice spent more time licking their paw when compared to control mice during the second phase ($p = 0.019$). Values are means ± SEM. * $p<0.05$ (Student's t-test, $\alpha = 0.05$).

Sup. Fig. 5. Comparative transcriptomic analysis of the consequences of the loss of *Prdm12* in basal and inflamed DRG. Volcano plots showing the $-\log_{10}$ adjusted p-value as a function of the log2 fold-changes of DEGs in basal (comparing L4-L6 DRG from uninjected sides of *Avil* icKO and control mice) and inflammatory (comparing DRG from formalin injected sides of *Avil* icKO and control mice) conditions are shown (n=5 for all biological conditions except n=4 for tamoxifen injected *Avil* icKO). Genes with a log2 fold-change > 0.449 are indicated in red, genes below the threshold are in light grey.

Sup. Fig. 6. Comparative transcriptomic analysis of the consequences of formalin injection in DRG of *Avil* icKO and control mice. (A) Volcano plots showing all DEGs obtained comparing the transcriptome of L4-L6 DRG from formalin injected versus non injected sides of *Rosa26* icKO and control mice, without any cut-off filtering, are shown (n=5 for all biological conditions except n=4 for tamoxifen injected *Avil* icKO). Note that many significant DEGs are found in *Avil* icKO DRG but

not in controls. (B,C) Gene ontology analysis of the DEGs identified comparing DRG of injected versus non injected sides of *Avil* icKO mice.
