

Supplementary Figures and Tables

Suppl. Figure 1: Image of a 2D echo 4-Chamber view, with the pulse wave cursor through the mitral valve. At the bottom of the image is the Pulse Wave Doppler trace of the mitral inflow velocities with the E and A waves labelled.

Suppl. Table 1: Correlations of maternal data with body fat at median 9 years. Maternal glucose (fasting and 2-hour post OGTT) and BMI were measured at 28 weeks and correlated with child's body composition taken at median 9 years of age. Correlation coefficients (r) are shown with p values (# $p \leq 0.05$ and * $p \leq 0.01$).

Maternal data ↓	Child data →	BMI	Body fat	Arm fat	Truncal fat	Supra iliac SFT	Triceps SFT	Subscapular SFT
Fasting glucose		0.07	0.28#	0.23#	0.23#	0.22#	0.14	0.14
2hr glucose		0.11	0.23#	0.26#	0.20	0.15	0.17	0.07
BMI		0.28*	0.25#	0.19	0.25#	0.24#	0.26*	0.27*

Suppl. Table 2: Generalised Linear Modelling with Child's Whole Body Fat or Truncal Fat (%) as dependent variable and ethnicity (reference group SA), gender (reference group male), maternal fasting glucose and maternal BMI as covariates. Significant values (in bold) are represented by: # $p \leq 0.05$, * $p \leq 0.01$ and ‡ $p \leq 0.001$.
