

Supplementary Table 4. Multivariable Analysis of Predictors of Clinical POR in Patients Who Were Not Treated with Biologics to Prevent Early Endoscopic POR in Crohn's Disease

Factor	HR (95% CI)	P-value
Concomitant immunosuppressive drug	0.645 (0.252–1.653)	0.361
Rutgeerts index		
i2a	Reference	
i2b	2.508 (0.500–12.585)	0.264
i3	3.166 (0.563–17.820)	0.191
i4	9.387 (1.026–85.916)	0.047
Anti-TNF	Reference	
Other strategy	3.105 (1.091–8.833)	0.034

POR, postoperative recurrence; HR, hazard ratio; CI, confidence interval; TNF, tumor necrosis factor.
