<sup>a</sup> Includes both single- and multiple-type HPV infections (ie, for multiple types, progression events count towards all individual types present at enrollment)

<sup>b</sup> Sum of person-months for all participants in group infected with noted genotype at enrollment; overall median follow-up time per person: 24.3 months

<sup>c</sup> Incidence rate per 1000 person-months (95% CI = 95% confidence interval); estimated with exponential accelerated failure time models for interval-censored data; for genotypes with zero events, estimated with Poisson exact method

<sup>d</sup> HPV risk stratification groups from Demarco et al. (2020)

<sup>e</sup> Highest three incidence rates for an individual HPV genotype among each group
