^a Sensitivity Analysis 1: LSIL n=195, ASCUS n=92; median follow-up time: 24.2 months; 17 progression events overall

^b Sensitivity Analysis 2: median follow-up time: 24.6 months; 17 progression events overall

^c Incidence rate per 1000 person-months; estimated with exponential accelerated failure time models for interval-censored data; for genotypes with zero events, estimated with Poisson exact method

^d Using hierarchical HPV risk groups from Demarco et al. (2020): HPV 16, else HPV 18/45, else HPV 31/33/35/52/58, and else HPV 39/51/56/59/68; risks estimated with Turnbull's nonparametric estimator for interval-censored data. For comparison, main analysis group-wise 5-year risks were 0.34, 0.12, 0.12, and 0.16, respectively (p=0.05)
