

A.**B.**

Supplementary Figure 4. A. Comparison of the pharmacokinetics of AL101 administered by two different routes [Intravenous (IV) and per os (PO)]. Plasma total free active drug concentrations in tumor-free mice was measured following the administration of AL101 at 1 mg/kg by either PO or IV. **B.** Escalating doses of AL101 were administered PO in tumor free animals for 2 weeks and body weight was assessed daily.
