

SUPPLEMENTAL INFORMATION

Excreted antibiotics may be key to emergence of increasingly efficient antibiotic resistance in food-animal production

Wild-type bacterial strains

AR-0044	<i>bla</i> _{CTX-M-15} -positive <i>E. coli</i>	CDC
AR-0081	<i>bla</i> _{CMY-2} -positive <i>K. pneumoniae</i>	CDC
AR-0114	<i>bla</i> _{KPC-3} -positive <i>E. coli</i>	CDC

^aAmp^r, ampicillin resistant; Cm^r, Chloramphenicol resistant; Kan^r, kanamycin resistant; Str^r, streptomycin resistant; Nal^r, nalidixic acid resistant.

^b*E. coli* isolates AR-0044, AR-0081 and AR-0114 were obtained from the CDC and FDA antibiotic resistance isolate bank.

Table S2. Primers used in this study.

Primer	Sequence (5' – 3') ^a	Purpose	Reference
pMMB207 Tem-1 removal primers			
p207_InvPCR-F	CAGGCATCAACCCCGTCAGTAGCTGAACAG	Used for knocking out Tem-1 promoter and Tem-1 gene in pMMB207	This study
p207_InvPCR-R	GACGGGGTGTGATGCCTGGCAGTTTATGGCG	Used for knocking out Tem-1 promoter and Tem-1 gene in pMMB207	This study
p207_Tem-1_F	GTATCCGCTCATGAGACAATAACCCTGATA	Used to confirm the deletion of Tem-1 cassette	This study
p207_Tem-1_R	GTGCACCCAACTGATCTTCAGCATC	Used to confirm the deletion of Tem-1 cassette	This study
Cloning of AR genes into pMMB207ΔTem-1 primers			
Prom+_CTXM&CMY-2	ATTCGG <u>GAGCTCT</u> GGGTCATCTCTTGCTAAAGTCA	Used for cloning of <i>bla_{CMY-2}</i> and <i>bla_{CTX-M-15}</i> with promoter region (-574 and -506 respectively) into pMMB207ΔTem-1	This study
CMY-2_R	ATTCGGGATCCTTATTGCAGCTTTTCAAGAATGCG	Used for cloning of <i>bla_{CMY-2}</i> into pMMB207ΔTem-1 (includes TTA stop codon)	This study
CTXM-15_R	ATTCGA <u>AAGCTTTT</u> TACAAACCGTCGGTGACGATTTTAG	Used for cloning of <i>bla_{CTX-M-15}</i> into pMMB207ΔTem-1 (includes TTA stop codon)	This study
Prom_KPC-3_F	ATTCGG <u>GAGCTCG</u> TTCAGTATTACTTTGGTGATTCAG	Used for cloning of <i>bla_{KPC-3}</i> with promoter region (-377) into pMMB207ΔTem-1	This study
KPC-3_R	ATTCGA <u>AAGCTTTT</u> ACTGCCCGTTGACGC	Used for cloning of <i>bla_{KPC-3}</i> into pMMB207ΔTem-1 (includes TTA stop codon)	This study
M13R49	GAGCGGATAACAATTTACACACAGG	Used to verify the insertion of <i>bla_{CMY-2}</i> , <i>bla_{CTX-M-15}</i> and <i>bla_{KPC-3}</i> genes into pMMB207ΔTem-1	Eurofins
TrcHis-R	CTTCTGCGTTCTGATTTAATCTG	Used to verify the insertion of <i>bla_{CMY-2}</i> , <i>bla_{CTX-M-15}</i> and <i>bla_{KPC-3}</i> genes into pMMB207ΔTem-1	Eurofins

Protein expression constructs			
P-1_Flag-CMY-2-R	TGTTGTTCTGTTTTTGCCTTATCGTCGTCATCCTTGTA ATCGGCAGCAAATGTG	Used for insertion of Flag-tag after signal peptide of <i>bla_{CMY-2}</i>	This study
P-2_CMY-2-F	CTCTTTCTCCACATTTGCTGCCGATTACAAGGATGAC GACGATAAGGCAAAAACAG	Used for insertion of Flag-tag after signal peptide of <i>bla_{CMY-2}</i>	This study
P-1_Flag-CTXM-15-R	CTGTACGTCCGCCGTCTTATCGTCGTCATCCTTGTA TCTTGCGCATAAC	Used for insertion of Flag-tag after signal peptide of <i>bla_{CTX-M-15}</i>	This study
P-2_CTXM-15-F	GCTGTATGCGCAAGATTACAAGGATGACGACGATAA GACGGCGGAC	Used for insertion of Flag-tag after signal peptide of <i>bla_{CTX-M-15}</i>	This study
P1_KPC3_Flag-R	GACGAGGTTGGTCAGCTTATCGTCGTCATCCTTGTA TCCGCGGTGGCAGAAAAG	Used for insertion of Flag-tag after signal peptide of <i>bla_{KPC-3}</i>	This study
P2_KPC3_Flag_F	GCTTTTCTGCCACCGCGGATTACAAGGATGACGACG ATAAGCTGACCAACCTCGTC	Used for insertion of Flag-tag after signal peptide of <i>bla_{KPC-3}</i>	This study
Enzyme kinetics constructs			
pET200-CTX-M-15-F	CACCATGGTTAAAAAATCACTGCGCCAGTT	Used for the cloning of blunt-end <i>bla_{CTX-M-15}</i> into pET200 vector for protein expression and purification (paired with primer CTXM-15_R)	This study
pET200-CMY-2-F	CACCATGATGAAAAAATCGTTATGCTGCGCTCTG	Used for the cloning of blunt-end <i>bla_{CMY-2}</i> into pET200 vector for protein expression and purification (paired with primer CMY-2_R)	This study
pET200-KPC-3-F	CACCATGTCACTGTATCGCCGTCTAGTT	Used for the cloning of blunt-end <i>bla_{KPC-3}</i> into pET200 vector for protein expression and purification (paired with primer KPC-3_R)	This study
T7	TAATACGACTCACTATAGGG	Used to verify the insertion of <i>bla_{CMY-2}</i> , <i>bla_{CTX-M-15}</i> , and <i>bla_{KPC-3}</i> into pET200 vector	Eurofins
T7-term	CTAGTTATTGCTCAGCGGT	Used to verify the insertion of <i>bla_{CMY-2}</i> , <i>bla_{CTX-M-15}</i> , and <i>bla_{KPC-3}</i> into pET200 vector	Eurofins
qPCR primers			
qPCR_CMY-2_F	CACCCAGTCACGCAGCAAACG	Used for the identification of <i>bla_{CMY-2}</i> containing clones in the competition assays	This study
qPCR_CMY-2_R	GATAGCATCGCCGCCAACAC	Used for the identification of <i>bla_{CMY-2}</i> containing clones in the competition assays	This study

qPCR_CTX-M-15_F	GACTGCCTGCTTCCTGGGTTG	Used for the identification of <i>bla_{CTX-M-15}</i> containing clones in the competition assays	This study
qPCR_CTX-M-15_R	GGTTGAGGCTGGGTGAAGTAAGTG	Used for the identification of <i>bla_{CTX-M-15}</i> containing clones in the competition assays	This study
qPCR_KPC-3_F	CTGACAACAGGCATGACGGT	Used for the identification of <i>bla_{KPC-3}</i> containing clones in the competition assays	This study
qPCR_KPC-3_R	GATAGAGCGCATGAAGGCCG	Used for the identification of <i>bla_{KPC-3}</i> containing clones in the competition assays	This study

^aRestriction enzyme sites are underline.

Fig. S1. Growth of *E. coli* cultures without antibiotic. Growth curves for CTX-M-15- (green square), CMY-2- (blue circle), and KPC-3- (purple triangle) producing strains of *E. coli* and for the plasmid-only negative control strain (red diamond). Average (+/- SEM) optical density for each time point was based on 15 experiments for which **no antibiotic** was added to the media. The tables below each figure present average area under the curve (AUC) with the standard error of the mean (SEM). Subscripts represent statistically nonsignificant grouping according to one-way ANOVA and Tukey's multiple comparisons test, ($P < 0.05$).

	CMY-2	CTX-M-15	KPC-3	Control
\bar{x} AUC	4.73 ^a	4.74 ^a	5.17 ^b	5.2 ^b
(SEM)	(0.09)	(0.12)	(0.1)	(0.1)

Fig. S2. Growth of *E. coli* cultures when exposed to ampicillin. Average growth curves (3 independent replicates, +/- SEM) for the CTX-M-15- (green square), CMY-2- (blue circle), and KPC-3- (purple triangle) producing strains of *E. coli* and for the plasmid-only negative control strain (red diamond) in the presence of 0, 8, 16, 32, 64, 128, 256, 512, 1,000, 1,500, 2,000, 2,500 or 3,000 $\mu\text{g/ml}$ of **ampicillin**. The tables below each figure present average area under the curve (AUC) with the standard error of the mean (SEM). Subscripts represent statistically nonsignificant grouping according to one-way ANOVA and Tukey's multiple comparisons test, ($P < 0.05$).

Figure S6. Growth of *E. coli* cultures when exposed to DFC-dimer. Average growth curves (3 independent replicates, +/- SEM) for the CTX-M-15- (green square), CMY-2- (blue circle), and KPC-3- (purple triangle) producing strains of *E. coli* and for the plasmid-only negative control strain (red diamond) in the presence of 0, 4, 8, 16, 32, 64, 128, or 256 $\mu\text{g/ml}$ of **DFC-dimer**. The tables below each figure present average area under the curve (AUC) with the standard error of the mean (SEM). Subscripts represent statistically nonsignificant grouping according to one-way ANOVA and Tukey's multiple comparisons test, ($P < 0.05$).

Fig. S7. SDS-PAGE analysis for CTX-M-15, KPC-3, and CMY-2 after HPLC purification. Coomassie stained SDS-PAGE gel showing a mass standard (M), CTX-M-15 (31 kDa), KPC-3 (32 kDa) and CMY-2 (37 kDa) protein bands. These preparations were used to estimate catalytic efficiency for each enzyme.

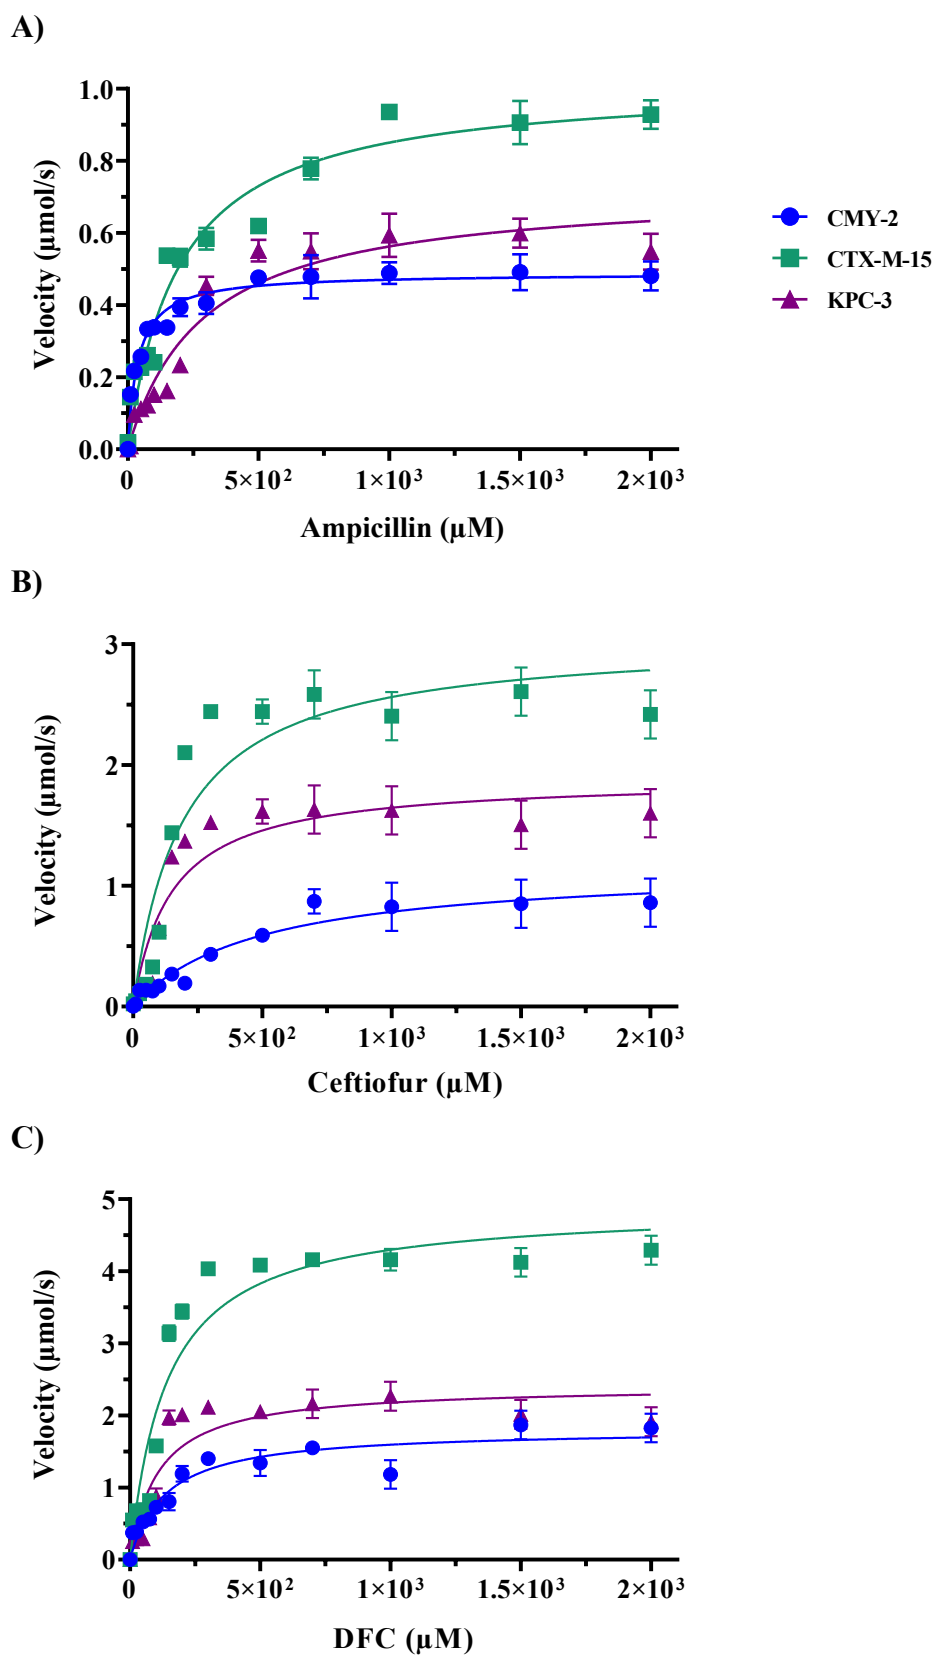

Fig. S8. Kinetic assays of CTX-M-15, CMY-2, and KPC-3 against (A) ampicillin, (B) ceftiofur (C) desfuroylceftiofur (DFC), (C) DFC-cysteine, (D) DFC-dimer and (E) DFC-dimer. Velocity plots are used in the calculation of steady-state kinetic parameters (Table 1). GraphPad Prism (San Diego, CA) was used to draw the plots. Data points represent the average of three independent replicates +/- SEM. See Table 1, Fig. S7 and the methods section for additional information.

D)

E)

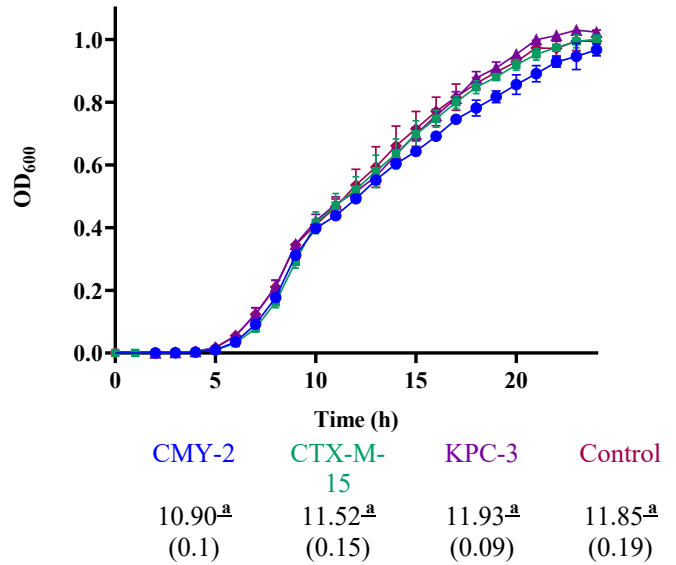

Fig. S9. *E. coli* cultures with ceftiofur added at 5 or 8 hours post inoculation. Average growth curves (3 independent replicates, +/- SEM) for the CTX-M-15- (green square), CMY-2- (blue circle), and KPC-3- (purple triangle) producing strains of *E. coli* and for the plasmid-only negative control strain (red diamond) with no antibiotic for the first five hours (left column) or for the first 8 hours (right column) before adding 4, 8, 16, 32, 64, 128, or 256 $\mu\text{g/ml}$ ceftiofur. The tables below each figure present average area under the curve (AUC) with the standard error of the mean (SEM). Subscripts represent statistically nonsignificant grouping according to one-way ANOVA and Tukey's multiple comparisons test, ($P < 0.05$).
