

Supplemental Figure 1. T-cells from NOD-60A mice transfer disease to NOD.scid recipients at only a marginally lower rate than those from NOD controls. Purified splenic T-cells (5×10^6) from NOD or NOD-60A female donors were transferred into female NOD.scid recipients then monitored for T1D onset by weekly urine testing. Survival curve comparisons were analyzed by log-rank (Mantel-Cox) test.
