

**Supplemental Figure 2. PAM50 classification of metastatic prostate cancer associates with *AR* splice variant expression.** PAM50 subtypes associate with *AR* splice variant levels (A) AR-V7 (exon 3-CE3), (B) AR-V3 (exon 2-CE4), (C) AR-V9 (exon 3-CE5) and (D) AR exon 2-exon 4, measured by RNA-seq and expressed as SRPM (spliced reads per million). Groups compared by Wilcoxon-rank tests with BH adjusted p-values shown on plots.
