

Figure S1. Transfection efficiency of miR-450b-5p mimics, miR-450b-5p inhibitor and NFKB1 overexpression plasmid. (A) Expression levels of miR-450b-5p in HUVECs transfected with miR-NC or miR-450b-5p mimics. **P<0.01 vs. miR-NC. (B) Expression levels of miR-450b-5p in HUVECs transfected with Inh-NC or miR-450b-5p inhibitor. **P<0.01 vs. Inh-NC. (C) Expression levels of NFKB1 expression in HUVECs transfected with empty vector or NFKB1 overexpression plasmid. **P<0.01 vs. empty vector. HUVEC, human umbilical vein endothelial cell; miR, microRNA; NC, negative control; inh, inhibitor.
