#### Supplementary Figures:

**Supplementary Figure 1.**  $\Delta K$  analysis

**Supplementary Figure 2.** Ancestral component probabilities at nucleotide resolution

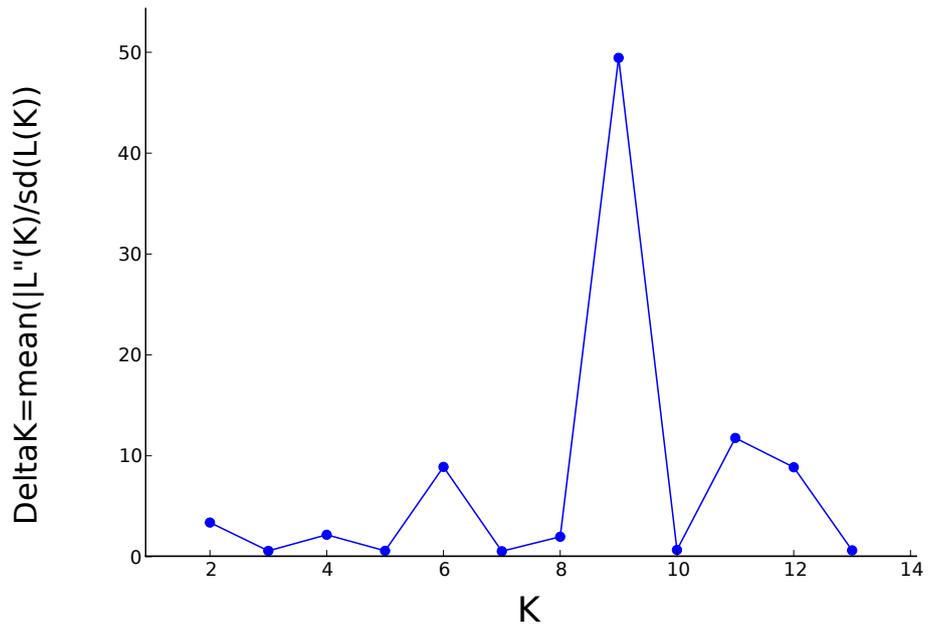

#### Supplementary Tables:

**Supplementary Table 1.** List of analyzed strains

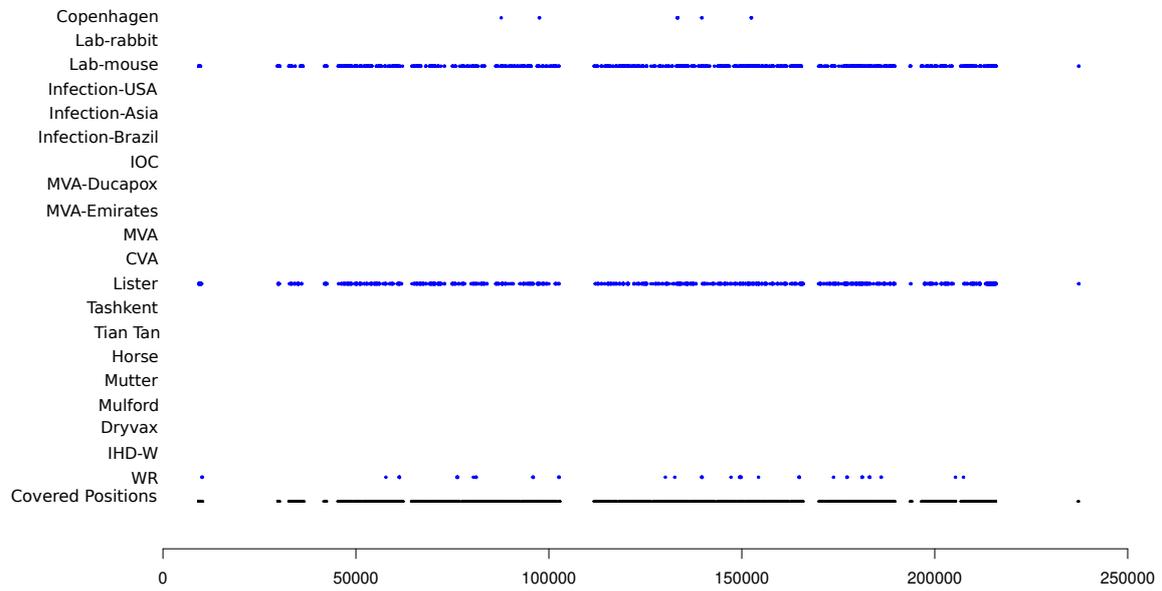

**Supplementary Table 2.** Cowpox and variola virus strains used for the phylogenetic network analysis

**Supplementary Table 3.** List of genes that are not or only partially covered by PIs

**Supplementary Figure 1.**  $\Delta K$  analysis. Identification of the optimal K for STRUCTURE analysis using the  $\Delta K$  method.

**Supplementary Figure 2. Ancestral component probabilities at nucleotide resolution.** Each line represents a randomly selected virus for each of the vaccine stocks/groups of VACV; each dot represents a PI site with a probability >0.75 to derive from Lister component. Color is the same as in Figure 3. Positions refer to the genome alignment.

**Supplementary Table 1. List of analyzed strains.**
