B2-50	95	100.07 ± 6.55	0.36 ± 0.09	-9.68 ± 1.55	6.7
B3-50	95	138.7 ± 35.24	0.31 ± 0.07	-4.83 ± 0.88	6.2
A1-100	92	88.08 ± 10.05	0.22 ± 0.06	1.67 ± 1.13	6.44
A2-100	88	89.45 ± 13.88	0.19 ± 0.05	-2.46 ± 0.27	6.25
A3-100	91	81.79 ± 9.16	0.19 ± 0.07	-3.58 ± 3.7	5.73
B1-100	92	85.72 ± 6.89	0.17 ± 0.06	-4.55 ± 1.04	5.5
B2-100	92	137.02 ± 69.77	0.21 ± 0.09	-8.02 ± 0.16	5.68
B3-100	88	225.48 ± 157.36	0.3 ± 0.2	-14.9 ± 2.9	5.97

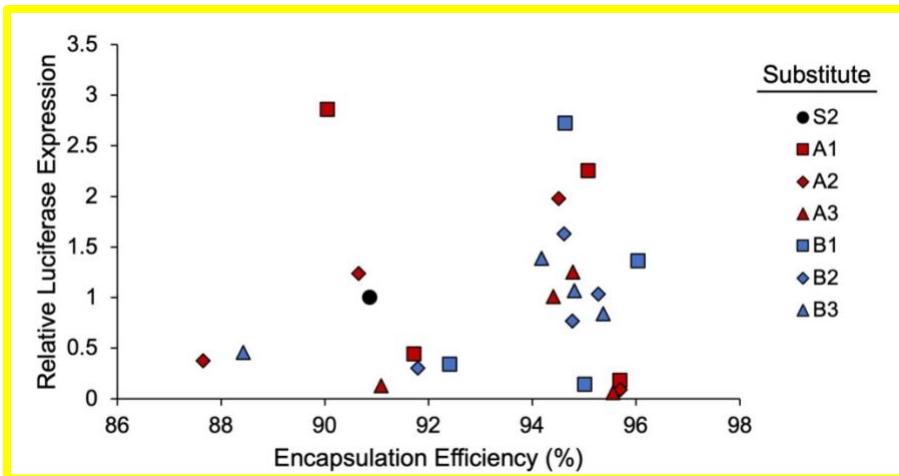

Supplemental Table 1. LNP library characterization data. Encapsulation efficiency, z-average size/diameter, PDI, zeta potential, and pKa for all LNPs in the library.

Supplemental Figure 1. Chemical structure of the C14-4 ionizable lipid.

Supplemental Figure 2. Luciferase expression in activated and unactivated primary T cells treated with luciferase-encoding mRNA LNPs with varying cholesterol substitutions. Primary human T cells were treated with various particles from the library (S2, A1-100, A2-100, A2-25, A3-25, B1-25, B2-25, B3-25) at a dose of 300 ng mRNA / 60,000 cells for 24 h. n = 1.

Supplemental Figure 3. Relationship between relative luciferase expression in Jurkats (immortalized T cells) and mRNA encapsulation efficiency of hydroxycholesterol-substituted LNPs and a control LNP. Replicate-averaged data from the in vitro screen described in the main text is plotted in this figure as relative luciferase expression versus mRNA encapsulation efficiency (%) to demonstrate no significant relationship between the two variables or hydroxycholesterol substitute. No correlation was found between the two variables in a t-test for linear regression ($p = 0.689 >> 0.05$).
