

Supplemental Figure 3

Supplemental Figure 3. Global DNA methylation in schizophrenia and non-psychiatric comparison subjects. Global DNA methylation does not differ between schizophrenia and non-psychiatric comparison subjects as assessed by comparison of B-spline smoothed **(A)** density distributions (SKAT-based test, $p > 0.99$) and **(B)** cumulative density functions (CDF). (SKAT-based test, $p = 0.65$). Sz, schizophrenia; C, non-psychiatric comparison.
