Assessment of the Quality	of the Research Articles
	□ Authorship
	Authors and contributors, their affiliations, and relevant credentials should be provided
	□ Attribution
	References and sources for all content should be listed clearly, and all relevant copyright information
	should be noted
JAMA	□ Disclosure
	Website "ownership" should be prominently and fully disclosed, as should any sponsorship,
	advertising, underwriting, commercial funding arrangements or support, or potential conflicts of
	interest
	□ Currency
	Dates when content was posted and updated should be indicated
JAMA scores:	
GQS	1. Poor quality, very unlikely to be of any use to patients
	2. Poor quality but some information present, of very limited use to patients
	3. Suboptimal flow, some information covered but important topics missing, somewhat useful to
	patients
	4. Good quality and flow, most important topics covered, useful to patients
	5. Excellent quality and flow, highly useful to patients
GQS scores:	
DISCERN scores	Section 1 Is the publication reliable?
	1. Are the aims clear?
	2. Does it achieve its aims?
	3. Is it relevant?
	4. Is it clear what sources of information were used to compile the publication (other than the author
	or producer)?
	5. Is it clear when the information used or reported in the publication was produced?
	6. Is it balanced and unbiased?
	7. Does it provide details of additional sources of support and information?
	8. Does it refer to areas of uncertainty?
Section 1 scores:	

	Section 2 How good is the quality of information regarding treatment choices?
	9. Does it describe how each treatment works?
	10. Does it describe the benefits of each treatment?
	11. Does it describe the risks of each treatment?
	12. Does it describe what would happen if no treatment is used?
	13. Does it describe how the treatment choices affect overall quality of life?
	14. Is it clear that there may be more than 1 possible treatment choice?
	15. Does it provide support for shared decision making?
Section 2 scores:	
	Section 3 Overall rating of the publication
	16. Based on the answers to all of the above questions, rate the overall quality of the publication as a
	source of information about treatment choices:
	Low (1-2): Serious or extensive shortcomings
	Moderate (3-4): Potentially important but not serious shortcomings
	High (5): Minimal shortcomings
Section 3 scores:	
DISCERN total scores:
