

Supplementary Tables

Supplementary Table 1: Genes modified in expression upon NCR247 treatment that are annotated to be involved in iron: from Penterman et.al, PNAS, 2014.

Supplementary Table 2: Primers, plasmids and strains used in this study.

Supplementary Fig. 1

Supplementary Fig. 1 | qRT-PCR analysis of the gene *SMc00128* used as a control in all the qPCR analysis. The SQ values do not change due to iron limitation, NCR247 treatment, and $\Delta bacA$ mutation. Direct SQ values are shown. Data are presented as a mean of three independent replicates \pm s.d. The change between genes is not significant according to student t test.
