

Supplementary figure 1. ROC curve analysis of the sNfL levels for predicting grade 3 PIPN.

PIPn: paclitaxel-induced peripheral neuropathy, sNfL: serum neurofilament light chain, AUC: area under the receiver operating characteristic curve

Supplementary figure 2. Platelet counts

Serial platelet counts during and six months after paclitaxel treatment in (A) the total study population and (B) grade-3 vs. grade 0–2 PIPN patients. Data are presented as (A) median (IQR) and (B) mean and standard error values.

PIPn: paclitaxel-induced peripheral neuropathy, PLT: platelets.
