

Figure S1: Analysis of intracellular amino acid levels in WT LAC, $\Delta ccpA$ and $\Delta codY$ mutants. A few amino acids (R, G and T) are under-represented in a $\Delta ccpA$ strain (A) and all amino acids are significantly over-represented in a $\Delta codY$ strain (B). Statistics: 2-way ANOVA with Sidak's multiple comparisons. Significance if $p < .05$
