

S3 Fig. Variation with time of cytological interpretations of atypical squamous cells of undetermined significance (ASC-US) by the three laboratories participating in the pilot programme. The percentage of samples diagnosed with ASC-US within the first 4 months, the preceding 4 months, and the remaining time period until 30 June 2017 for lab 1 (blue line), lab 2 (orange line), and lab 3 (grey line). (A) Women diagnosed with ASC-US among screen-positives in the HPV-Screening protocol. (B) Women diagnosed with ASC-US in the LBC-Screening protocol in lab 1 (blue line), lab 2 (orange line), and lab 3 (grey line).
