

### Supplemental Figure 1: Institutions Providing Copy Number and Fusion Data

The number of institutions providing copy number alteration data (gray bars) has increased from three through the 5.0-public release to seven in the 9.1-public release. Similarly, the number of institutions providing fusion (structural variant) data (purple bars) has steadily increased beginning with the 5.0-public release. The temporary decrease in the 6.2-public release reflected removal of data for QA reasons; these data were returned in subsequent releases.
