

## Supplementary material

*This supplementary material is hosted by Eurosurveillance as supporting information alongside the article “Age specific associations between underlying health conditions and hospitalisation, death and in-hospital death among confirmed COVID-19 cases: a multi-country study”, on behalf of the authors, who remain responsible for the accuracy and appropriateness of the content. The same standards for ethics, copyright, attributions and permissions as for the article apply. Supplements are not edited by Eurosurveillance and the journal is not responsible for the maintenance of any links or email addresses provided therein.*

### Supplementary files:

Table S1 Characteristics of COVID-19 cases included in the primary analysis .....	3
Table S2 Distribution of outcome and exposure variables across all cases, cases dropped from the analysis due to missing information and those included in the analysis .....	4
Table S3 Number of cases, total and with outcome, by age group included in the age-interaction models for hospitalisation.....	5
Table S4 Number of cases, total and with outcome, by age group included in the age-interaction models for death	6
Table S5 Number of cases, total and with outcome, by age group included in the age-interaction models for in-hospital deaths .....	7
Table S6 Predicted probabilities of hospitalisation for each underlying conditions and exposure compared to COVID-19 cases without an underlying condition, 2 June – 13 December 2020 .....	8
Table S7 Predicted probabilities of death for each underlying conditions and exposure compared to COVID-19 cases without an underlying condition, 2 June – 13 December 2020 .....	10
Table S8 Predicted probabilities of in-hospital death for each underlying conditions and exposure compared to COVID-19 cases without an underlying condition, 2 June – 13 December 2020 .....	12
Table S9 Distribution of study population by age and sex with crude attack rates (AR) for each underlying condition and outcome for the sensitivity analysis, 6 February – 13 December, 2020 .....	14
Table S10 Age-adjusted and age-stratum specific associations between underlying condition and hospitalisation for the sensitivity analysis, 6 February – 13 December 2020.....	15
Table S11 Age-adjusted and age-stratum specific associations between underlying condition and death for the sensitivity analysis, 6 February – 13 December 2020 .....	16
Table S12 Age-adjusted and age-stratum specific associations between underlying condition and in-hospital death for the sensitivity analysis, 6 February – 13 December 2020.....	17
Table S13 Predicted probabilities of hospitalisation for each underlying conditions and exposure compared to COVID-19 cases without an underlying condition for the sensitivity analysis, 7 February – 13 December 2020.....	18
Table S14 Predicted probabilities of death for each underlying conditions and exposure compared to COVID-19 cases without an underlying condition for the sensitivity analysis, 7 February – 13 December 2020 .....	20
Table S15 Predicted probabilities of in-hospital death for each underlying conditions and exposure compared to COVID-19 cases without an underlying condition for the sensitivity analysis, 7 February – 13 December 2020.....	22

Figure S1 Predicted probabilities of hospitalisation, death and in-hospital death for each underlying conditions compared to COVID-19 cases without an underlying condition for the sensitivity analysis, 7 February – 13 December 2020.....24

**Table S1 Characteristics of COVID-19 cases included in the primary analysis**

	Cases included in analysis <sup>1</sup>	Hospitalisation, n (AR%)	Death, n (AR%)	In-hospital death, n (AR%)
<b>Sex</b>				
Female	396,750	31,797 (8.0)	8,623 (2.2)	6,166 (19.4)

\*0 indicates no underlying health condition, reference group; Probabilities were estimated from the fully adjusted age-interaction models. Baseline risks may therefore slightly vary between the different models. CI: Confidence interval; NA: Not available as no outcome occurred within the age group, PP: predicted probabilities

\*0 indicates no underlying health condition, reference group; The probabilities were estimated from the fully adjusted age-interaction models. Baseline risks may therefore vary between the different models. CI: Confidence interval; NA: Not available as no outcome occurred within the age group, PP: predicted probabilities.

**Table S14 Predicted probabilities of death for each underlying conditions and exposure compared to COVID-19 cases without an underlying condition for the sensitivity analysis, 7 February – 13 December 2020**
