

Supplementary Figure 3

S3 Fig. Kinetics of *Acs11* induction by LPS treatment.

BMDMs were differentiated in NG and treated with LPS (10ng/ml). RNA was isolated at the indicated times, cDNA was synthesized, and *Tnf*, *Il6*, and *Acs11* mRNA were determined by qPCR relative to cyclophilin A. The data presented are means \pm standard errors of the means of two independent experiments.
