Proteomic identification

MS/MS raw data were routinely searched by Mascot MS/MS Ion search software using COLLE database and considering deamidation on Gln and Asn, oxidation on Met, hydroxylation of proline and lysine as variable modifications, unless otherwise stated. LC-MS/MS data and COLLE database have been deposited to Mendeley Data <https://data.mendeley.com/datasets/hbmc8yhf7y/4>

Table S3: Collagen chains identified in the Rabbit Glue SOB1 sample (HP1)

Gene Name	Taxonomy	Protein Identifier	Protein Score	Sequence Coverage (%)	No. of Peptides	No. of Unique Peptides

Table S21: Collagen chains identified in the Rabbit Glue 10 sample (HP8).

Gene Name	Taxonomy	Protein Identifier	Protein Score	Sequence Coverage (%)	No. of Peptides	No. of Unique Peptides
COL1A1	<i>Bos taurus</i>	P02453	2498	56	52	1
COL1A2	<i>Bos taurus</i>	P02465	2512	57	51	9
COL3A1	<i>Bos taurus</i>	P04258	1654	39	38	9

Collagen modification: Backbone cleavage

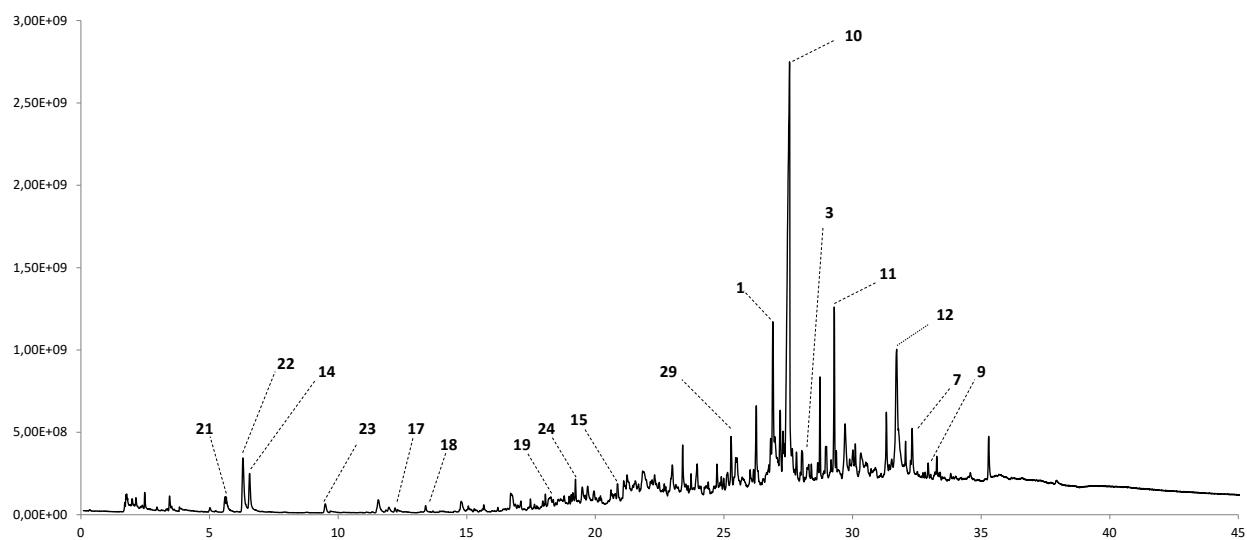

Figure S1. HP6 glue pyrogram. Peak numbering refers to compounds listed in Table S22

Table S22 Molecules identified in the pyrogram of HP6 and their most abundant mass spectrometric ions (m/z).

#	Compound	Characteristic (fragment) ions (m/z)
DKPs		
1	Cyclo(Pro-Ala)1	70, 97, 125, 168
2	Cyclo(Pro-Ala)2	70, 97, 125, 168
3	Cyclo(Pro-Val)1	70, 72, 125, 154, (196)
4	Cyclo(Pro-Val)2	70, 72, 125, 154, (196)
5	Cyclo(Pro-Met)1	70, 139, 154, 167, 228
6	Cyclo(Pro-Met)2	70, 139, 154, 167, 228
7	Cyclo(Pro-pyroGlu)	70, 96, 124, 152, 180, 208
8	Cyclo(Pro-Phe)1	70, 91, 125, 153, 244
9	Cyclo(Pro-Phe)2	70, 91, 125, 153, 245
10	Cyclo(Pro-Gly)	83, 98, 111, 154
11	Cyclo(Pro-Pro)	70, 96, 138, 166, 194
12	Cyclo(Pro-Hyp)1	70, 86, 124, 210
13	Cyclo(Pro-Hyp)2	70, 86, 124, 210
Aromatic hydrocarbons and heteroaromatics		
14	Toluene	51, 65, 91
15	Benzene propanenitrile	91, 92, 131

16	Phenol	55, 66, 94
17	Ethyl-benzene	51, 65, 77, 91, 106
18	Styrene	51, 71, 104
19	Methyl-phenol	51, 77, 107
20	Methyl-pyrrole	53, 81
21	Pyridine	52, 79
22	Pyrrole	52, 67
23	Ethyl-pyrrole	53, 67, 80, 95
24	Benzeneacetonitrile	51, 63, 77, 90, 117
25	Diphenyl-ethylene	65, 91, 182
26	Propyl-benzene	65, 80, 91, 105, 120
27	Butenyl-benzene	65, 91, 104, 115, 132
28	Pyrazine	53, 8
29	Diethyl-pyrazine	53, 80, 107, 108, 136
30	2,5-Pyrrolidinedione	56, 99
Fatty acids		
31	n-Hexadecanoic acid	60, 73, 129, 213, 256
32	9-Octadecenoic acid	69, 83, 97, 111, 264
33	Tetradecanoic acid	73, 97, 129, 185, 228
34	Octadecanoic acid	73, 129, 185, 241, 284

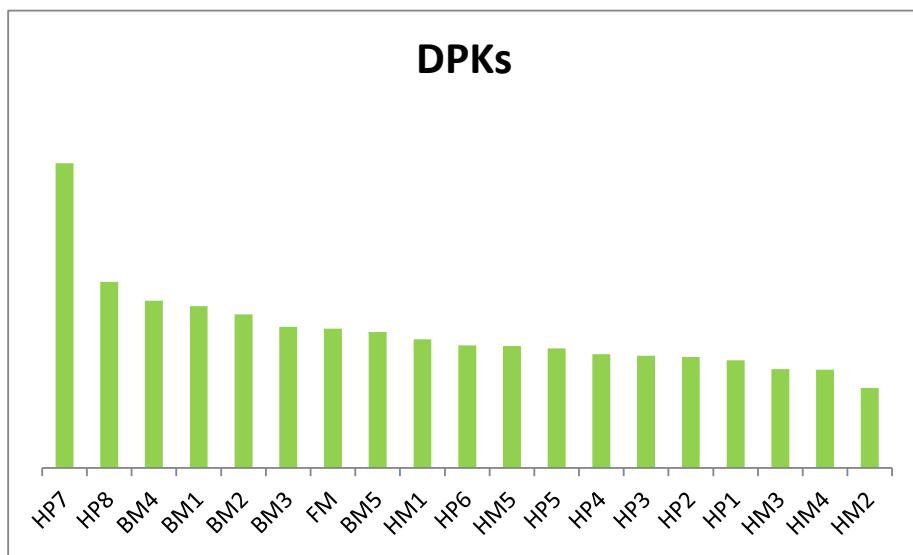

Figure S2. Sum of the areas of all DPKs detected normalized for the sample weight

Collagen damage: deamidation of glutamine and asparagine.

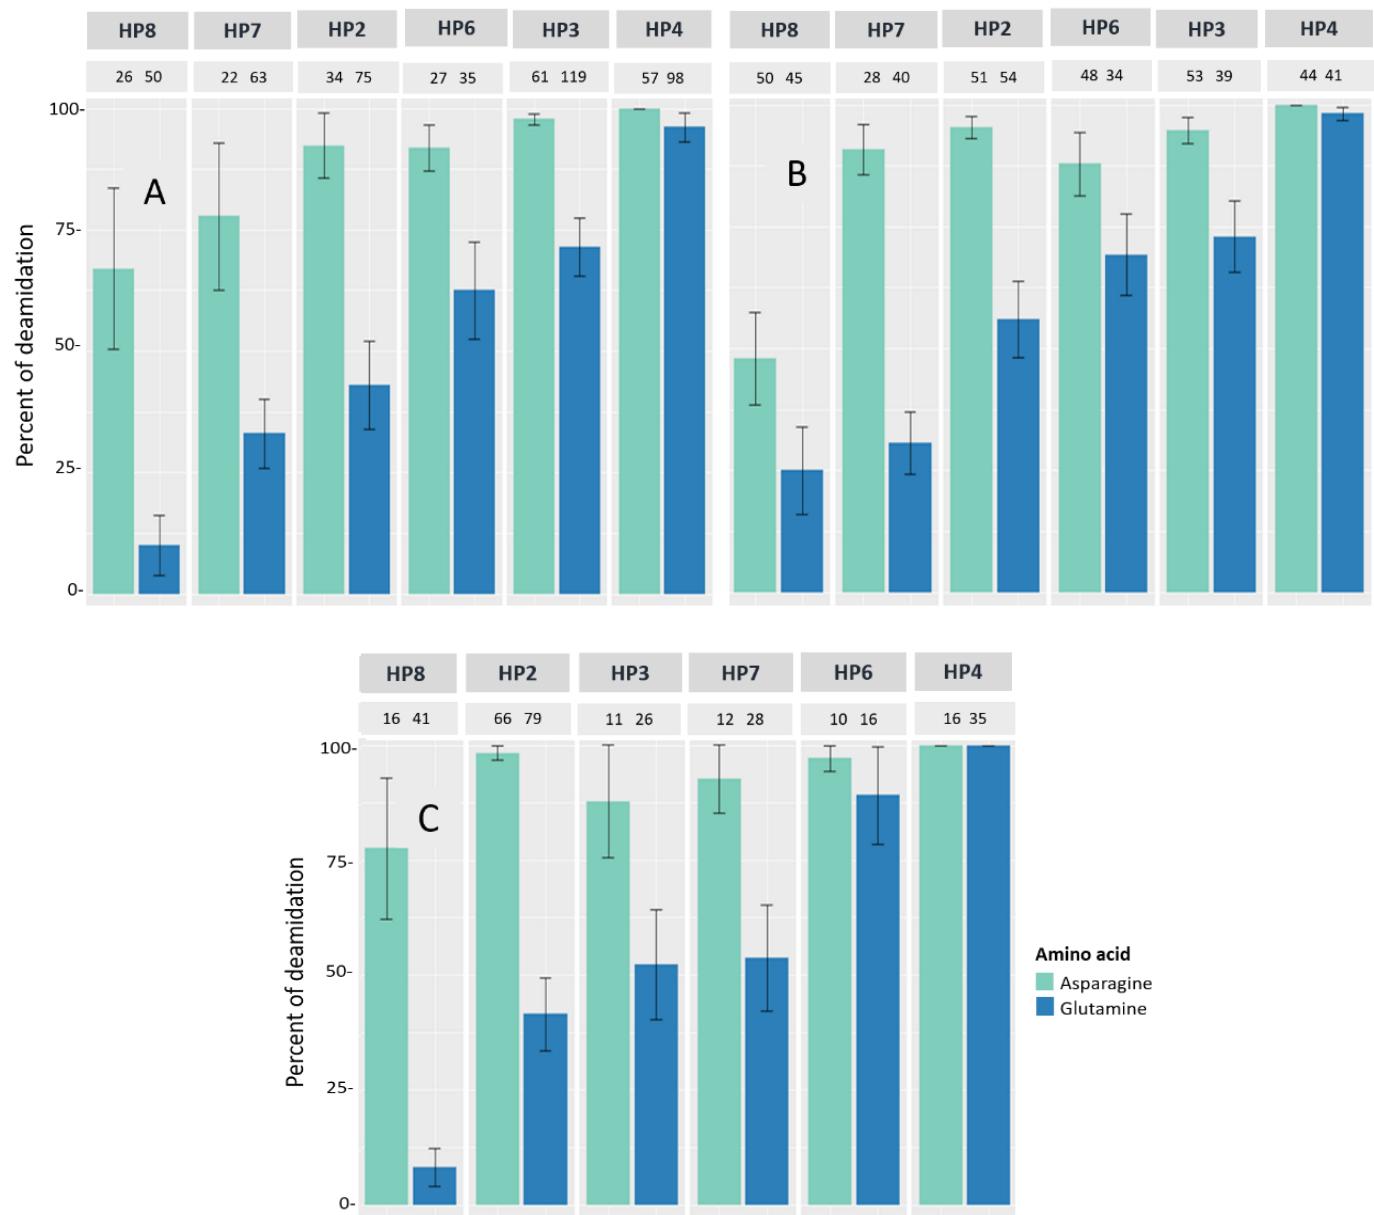

Figure S3: Overall percentage of deamidation of the single collagen chains in bovine pure hide glues (HP).

Semi-quantitative evaluation of deamidation for asparagines (N) and glutamines (Q) as calculated by MaxQuant software¹ with an in-house script based on peptide spectrum matches intensities², for collagen alpha-1(I) (A), collagen alpha-2(I) (B), and collagen alpha-1(III) (C). Error bars represent standard deviation and numbers above each bar represent the number of peptides the data is based on.

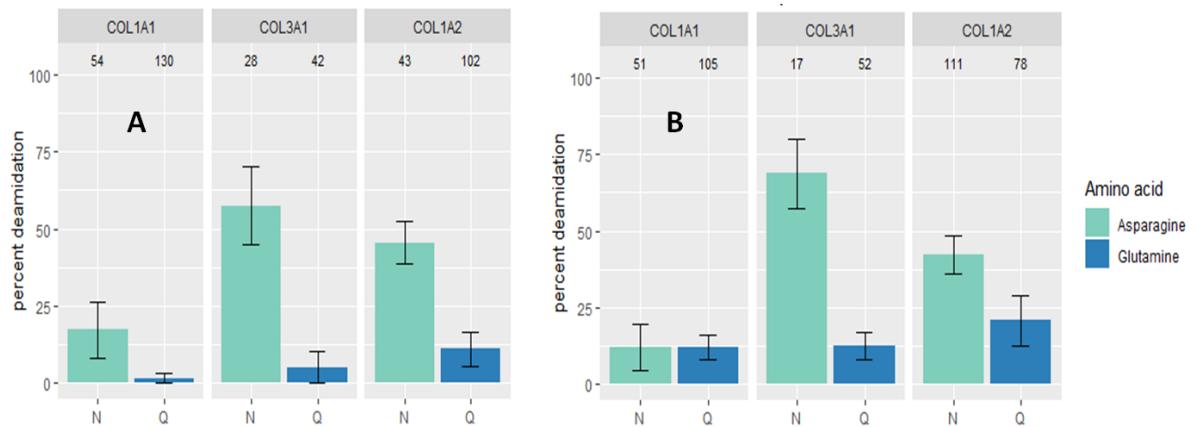

Figure S4: Overall percentage of deamidation of the single collagen chains in pure hide glues that contain only porcine glue (HP5) (A panel) and only rabbit glue (HP1) (B panel).

Semi-quantitative evaluation of deamidation for asparagines (N) and glutamines (Q) as calculated by MaxQuant software¹ with an in-house script based on peptide spectrum matches intensities². Error bars represent standard deviation and numbers above each bar represent the number of peptides the data is based on for the several chains of collagen

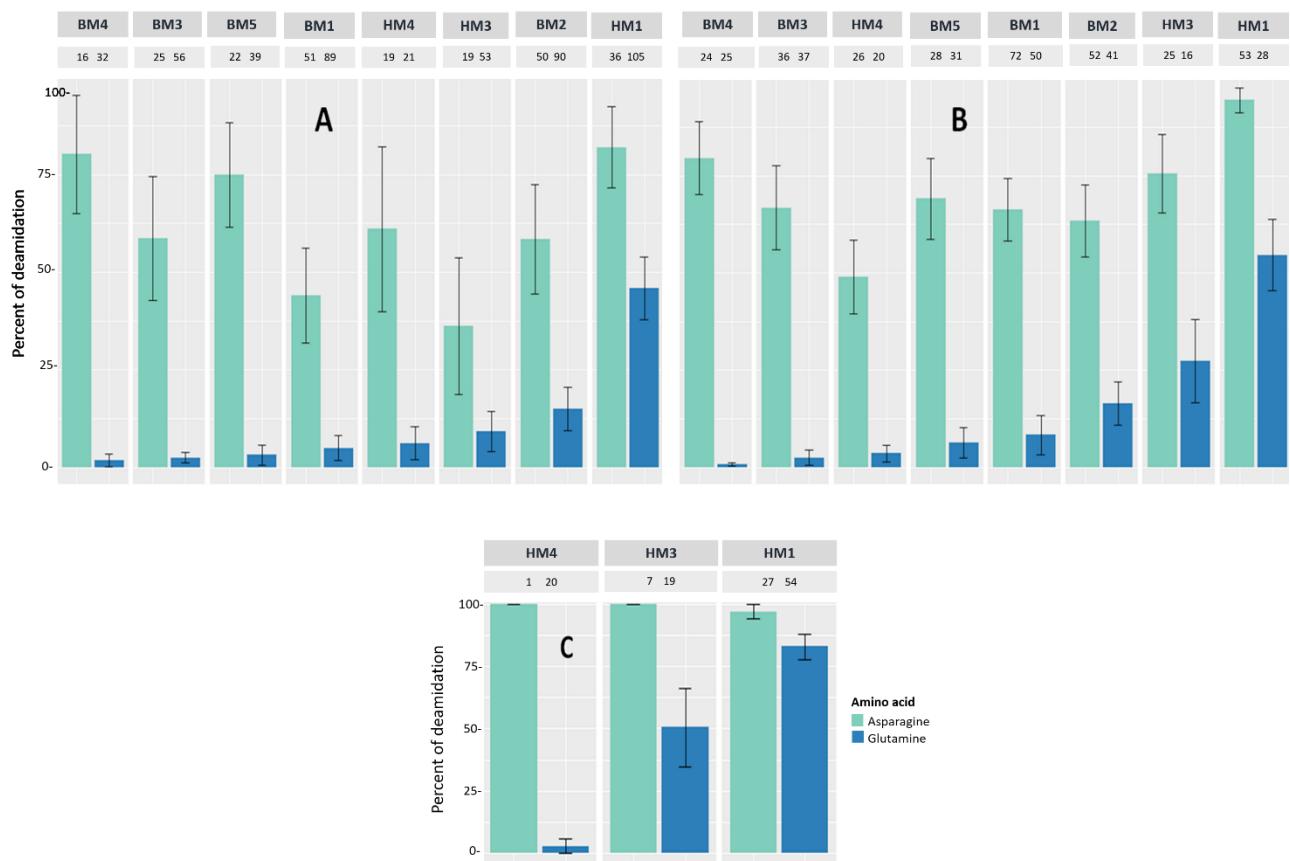

Figure S5: Overall percentage of deamidation of bovine collagen alpha-1(I) (A), collagen alpha-2(I) (B), and collagen alpha-1(III) (C) chains in mixed hide and bone glues containing bovine collagen.

Semi-quantitative evaluation of deamidation for asparagines (N) and glutamines (Q) as calculated by MaxQuant software¹ with an in-house script based on peptide spectrum matches intensities². Error bars represent standard deviation and numbers above each bar represent the number of peptides the data is based on.

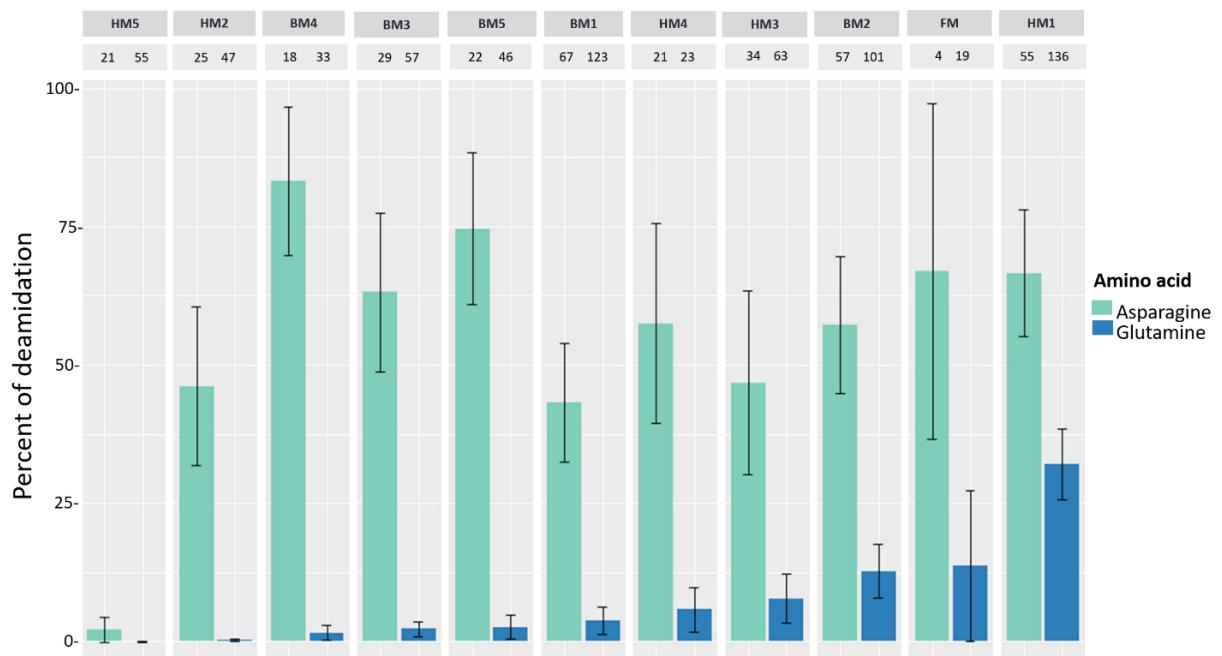

Figure S6: Overall percentage of deamidation of the protein family collagen alpha-1(I) in mixed animal glues.

Semi-quantitative evaluation of deamidation for asparagines (N) and glutamines (Q) was as calculated by MaxQuant software¹ with an in-house script based on peptide spectrum matches intensities². Error bars represent standard deviation and numbers above each bar represent the number of peptides the data is based on.

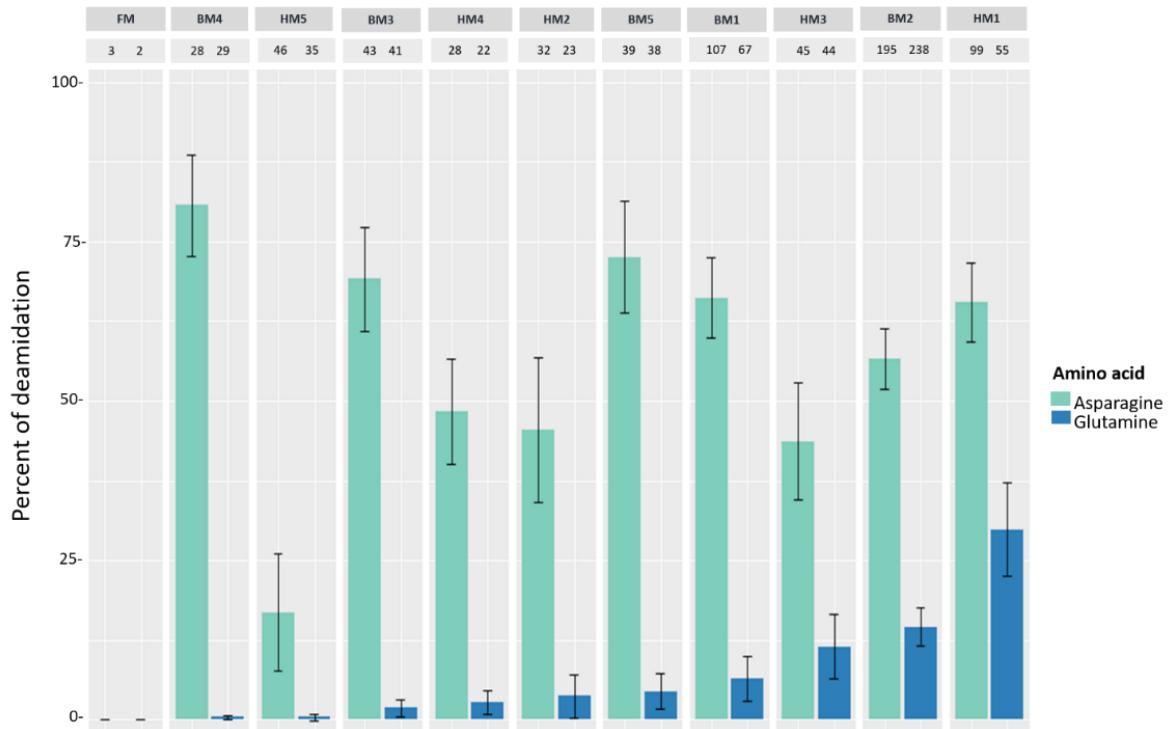

Figure S7: Overall percentage of deamidation of the protein family collagen alpha-2(I) in mixed animal glues.

Semi-quantitative evaluation of deamidation for asparagines (N) and glutamines (Q) was as calculated by MaxQuant software¹ with an in-house script based on peptide spectrum matches intensities². Error bars represent standard deviation and numbers above each bar represent the number of peptides the data is based on.

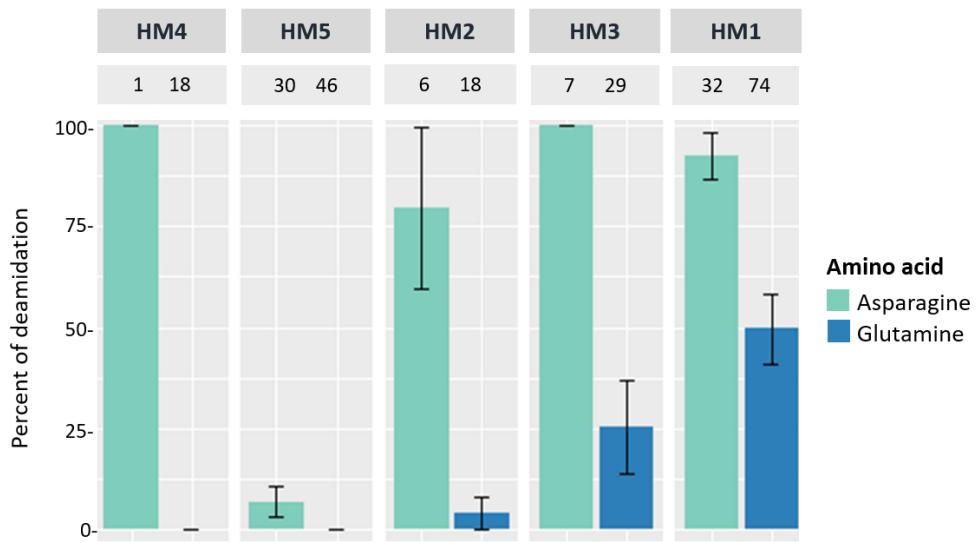

Figure S8: Overall percentage of deamidation of the protein family collagen alpha-1(III) in mixed animal glues.
 Semi-quantitative evaluation of deamidation for asparagines (N) and glutamines (Q) as calculated by MaxQuant software¹ with an in-house script based on peptide spectrum matches intensities². Error bars represent standard deviation and numbers above each bar represent the number of peptides the data is based on.

Table S23: Site-specific evaluation of deamidation (N, Q) and oxidation (M) along *Bos taurus* collagen $\alpha 1(I)$ sequence in all the pure bovine animal glues.

Asn and Gln detected as unmodified only (X); detected as deamidated (D); Detect both as unmodified and deamidated (DX); not detected at all (NF). Met detected as unmodified (X), as oxidized (O), both as unmodified and oxidized (OX); not detected at all (NF).
