

## Supplementary figures

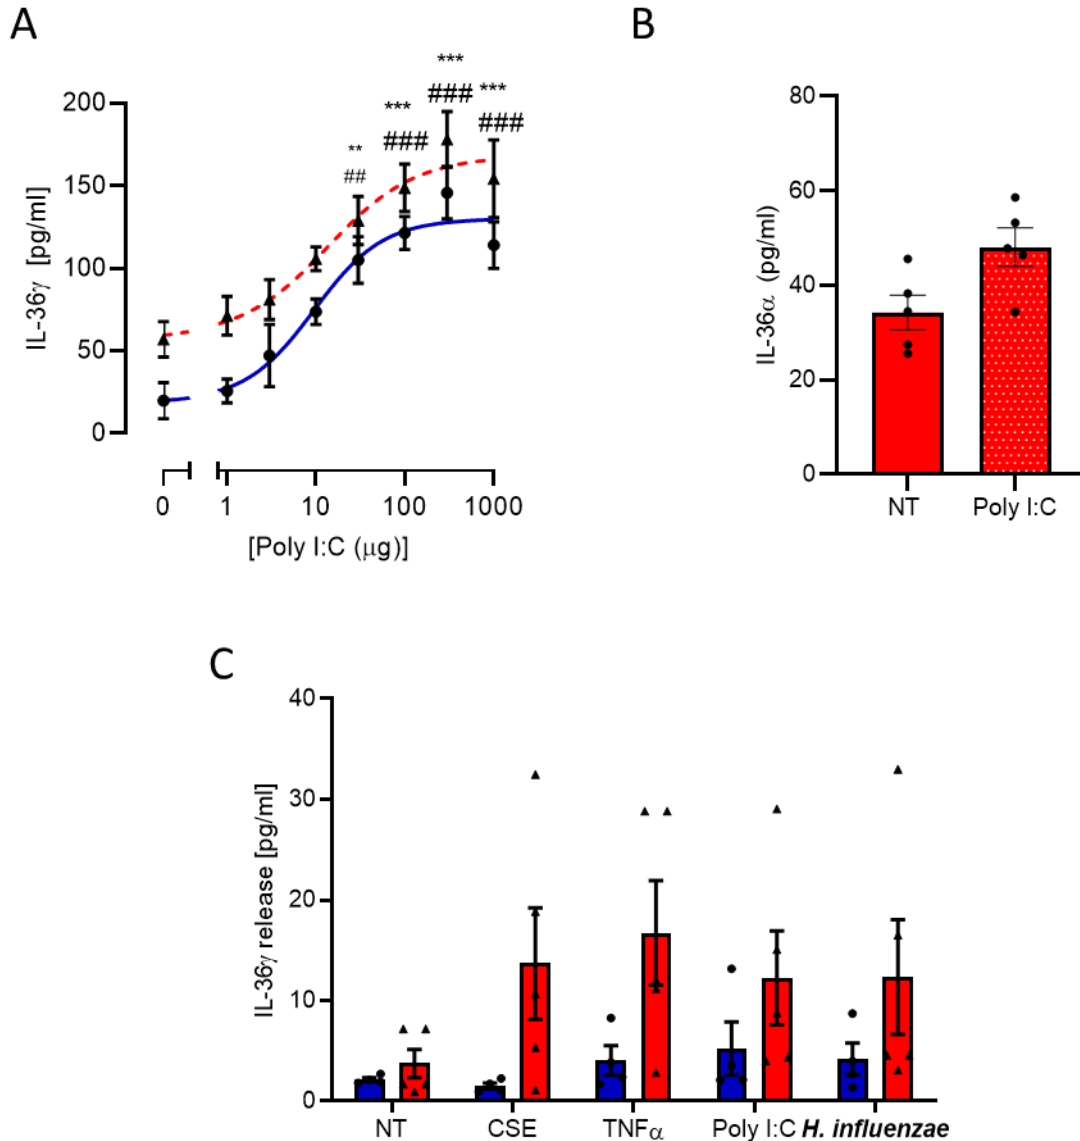

### Supplementary Figure 1. IL-36 cytokines levels in human samples.

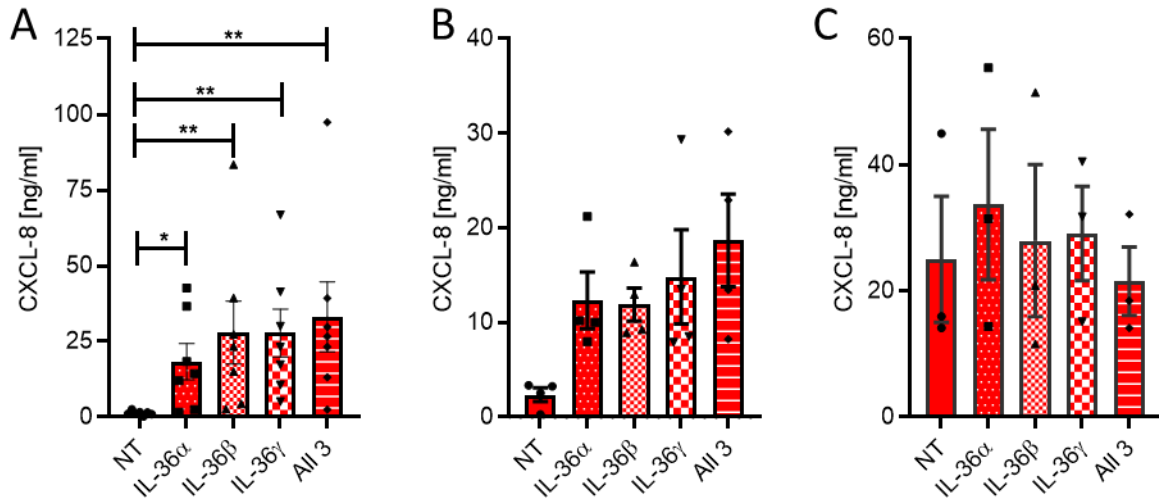

A) IL-36 $\alpha$  and B) IL-36 $\beta$  were measured in bronchoalveolar lavage fluid of non-smokers (n=12), smokers (n=11) and COPD (n=11) patients by ELISA. C) IL-36 $\alpha$  and D) IL-36 $\beta$  were measured in nasal lining fluid of non-smoker (n=8) and COPD (n=11) patients by ELISA. E) IL-36 $\alpha$  and F) IL-36 $\gamma$  were measured in serum samples of non-smokers (n=11) smokers (n=12) and COPD (n=12) patients by ELISA. Data are mean  $\pm$  SEM and LLD = lower limit of detection

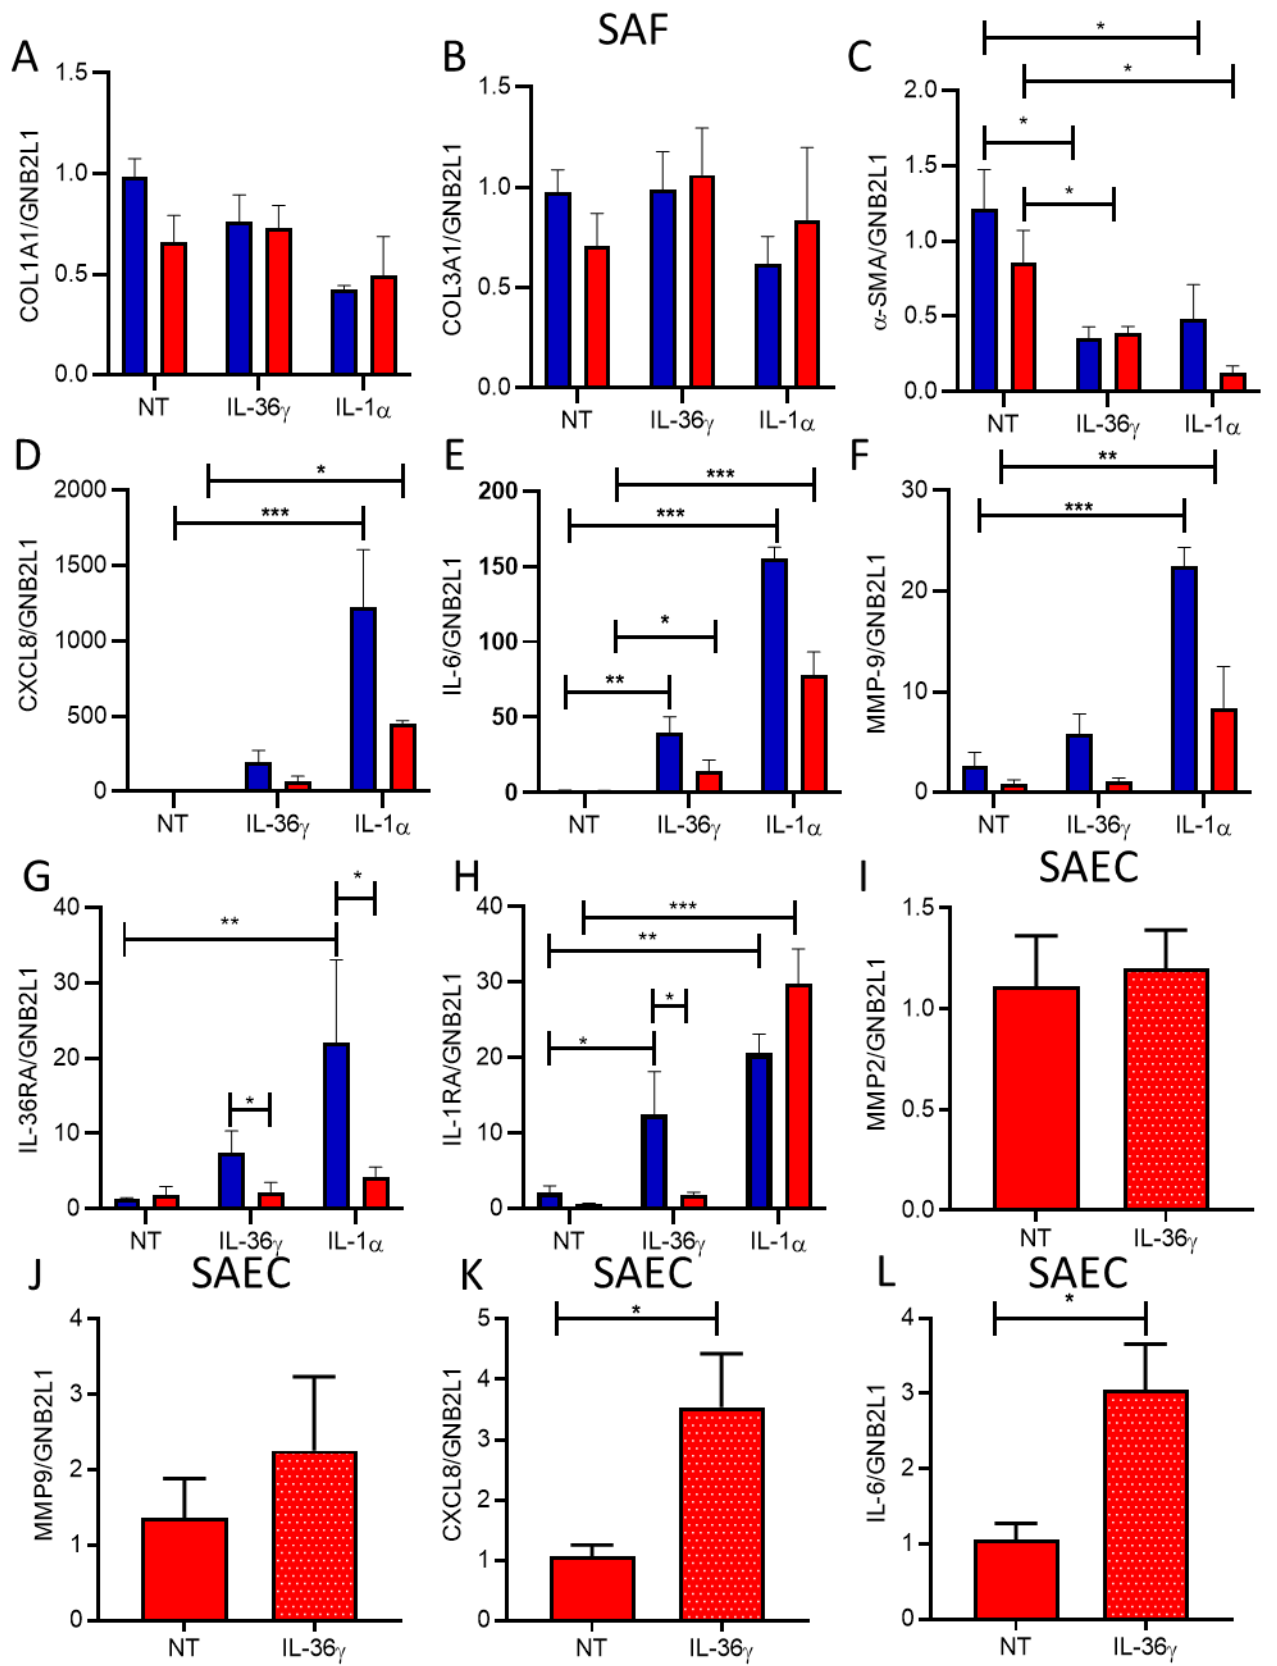

**Supplementary Figure 2. Expression of IL-36 isoforms and receptor in human lung tissue macrophages, small airway fibroblasts and small airway epithelial cells.** A) *IL-36A* and B) *IL-36B* gene expression were measured in lung tissue macrophages from non-smokers (NS) (n=7-11), smokers (S) (n=11-17) and COPD patients (n=13-22). C) *IL-36 $\beta$*  gene expression was measured in SAF from non-smokers (n=8) and COPD patients (n=8). Gene expression of D) *IL-36A* and E) *IL-36B* were measured in small airway epithelial cells from non-smokers (n=8) and COPD patients (n=9). F) *IL-1RA* gene expression was detected in non-smoker (n=10), smoker (n=17) and COPD (n=22) tissue macrophages. *IL-36* receptor gene expression was measured in G) tissue macrophages H) SAEC and I) SAF. Data are means  $\pm$  SEM and analyzed by Kruskal-Wallis test with post-hoc Dunn's test or by Mann-Whitney U test; \* P < 0.05.

**Supplementary Figure 3. Poly I:C induces IL-36 $\gamma$  release from SAEC, but not SAF, whilst not inducing IL-36 $\alpha$ .** A) Small airway epithelial cells from non-smokers (NS, ●, blue n=3) and COPD patients (▲, red n=3) were exposed to increasing concentrations of poly I:C for 24h. Media was collected and IL-36 $\gamma$  was measured by ELISA. B) SAEC were treated with 100  $\mu$ g/ml of Poly I:C for 24 hours and IL-36 $\alpha$  release detected by ELISA. C) SAF from non-smokers (NS, ●, blue, n=4) and COPD patients (▲, red, n=5) were exposed to media alone (no treatment: NT), 10% (v/v) cigarette smoke extract (CSE), 10 ng/ml TNF $\alpha$ , 100 $\mu$ g/ml poly I:C, or 1.5x10<sup>10</sup> CFU/ml *H. influenzae* for 24h. Media was collected and IL-36 $\gamma$  release measured by ELISA. Data are means  $\pm$  SEM and analyzed by Kruskal-Wallis test with post-hoc Dunn's test \*\* P < 0.01 and \*\*\* P < 0.001 for COPD subjects and ### P < 0.01 and ### P < 0.001 for NS.

**Supplementary Figure 4. Effect of IL-36 cytokines alone and in combination on CXCL-8 release from small airway fibroblasts, human small airway epithelial cells and lung tissue macrophages.** A) Small airway fibroblasts, B) small airway epithelial cells and C) lung tissue macrophages were incubated in the absence (non-treated: NT) or presence of 33 ng/ml IL-36 $\alpha$ , IL-36 $\beta$ , IL-36 $\gamma$  or all three in combination for 24h. Media was harvested, and release of CXCL-8 measured by ELISA. Data are means  $\pm$  SEM and analyzed by Kruskal-Wallis test with post-hoc Dunn's test; \* P < 0.05, \*\* P < 0.01.

**Supplementary Figure 5. Effect of IL-36 $\gamma$  and IL-1 $\alpha$  cytokines on gene expression in small airway fibroblasts (SAF) and small airway epithelial cells (SAEC).** Small airway fibroblasts from non-smokers (n=7, blue) or COPD (n=7, red) were treated with 100 ng/ml of IL-36 $\gamma$  or IL-1 $\alpha$  ng/ml for 24h. RNA was collected and gene expression of A) COL1A1, B) COL3A1, C)  $\alpha$ -SMA and D) CXCL8, E) IL-6, F) MMP-9, G) IL-36RN and H) IL-1RA were detected by qRT-PCR. Small airway epithelial cells (n=4) were treated with 100 ng/ml of IL-36 $\gamma$  for 24h. RNA collected and gene expression of I) MMP-2, J) MMP-9, K) CXCL8, and L) IL-6, were detected by qRT-PCR Data are means  $\pm$  SEM and analyzed by two-way anova with post-hoc Dunnett's multiple comparisons test (panel A-H) or by Mann-Whitney U test (panel I-L) ; \* P <0.05, \*\* P<0.01, \*\*\* P<0.001.

**Supplementary Figure 6. Effect of IL-36 $\gamma$  on gene expression in small airway fibroblasts (SAF).** Small airway fibroblasts from non-smokers (n=6, blue) or COPD (n=6, red) were treated with 100 ng/ml of IL-36 $\gamma$  for 24h. RNA was collected and gene expression of A) TGFB $\beta$ , and B) SMAD3 were detected by qRT-PCR. Data are means  $\pm$  SEM.

**Supplementary Figure 7. Poly I:C stimulated SAEC conditions media induces release of other cytokines from SAF.** Small airway fibroblast (n=4) were treated with diluted (ranging from 10-200 fold) media from untreated or Poly I:C treated SAEC and A) CXCL8 and B) IL-6 release were detected by ELISA. Data are means  $\pm$  SEM and analyzed by Mann-Whitney U test; \* P < 0.05.
