

## Description of Additional Supplementary Files

**File name:** Supplemental Data 1

**Description:** The source data behind the graphs in the paper

**File name:** Supplemental Data 2

**Description:** Differential gene expression of lung derived MAIT cells and non-MAIT CD8+ T cells.

Genes that were enriched in MAIT samples from lung (compared to lung CD8+ non-MAIT) at thresholds of FDR-adjusted P value  $\leq 0.001$ ; and log<sub>2</sub> fold change  $> 1$  or  $< -1$ .
