^aMoore 2019 HC refers to the Moore 2019 Healthy Change arm (compared with half the control group). Similarly, Moore 2019 SC refers to the Moore 2019 System Change arm (compared with half the control group).

^bTheory based intervention was defined as per the framework outlined by Painter et al³⁴. A study was identified as involving physical activity if they performed exercise with the participants directly as part of the intervention. N means data not available.

Footnotes

Estimation method code 1: intervention effect determined from differences at follow-up between intervention and control groups in RevMan using means, SDs and sample size for intervention and control groups

Estimation method code 2: intervention effect is obtained from published estimates reporting change in the intervention group adjusted for change in the control group that used ANCOVA/repeated measures ANOVA/mixed models/multilevel models

Subgroups within the same study (shaded rows) were combined first using fixed effects meta-analysis for pooling with other studies
