

Fig. S3. The SARS-CoV-2 receptor and co-factor expressions (related to Fig. 3). The mRNA levels of ACE2, TMPRSS2, Furin, and Cat L were detected by qRT-PCR at 12 h after HRSV, HPIV, or HRV3 infection (**a**) or at 60 h after coinfection with SARS-CoV-2 (**b**). The data are expressed as the fold changes relative to the mock infection (**a**) or non-preinfection (**b**) controls. Values represent means \pm SD of three independent experiments.

* $P < 0.05$, ** $P < 0.01$, *** $P < 0.001$, **** $P < 0.0001$.
