

Appendix S2 – Full text inclusion/exclusion checklist

First author (year):								
Inclusion/exclusion criteria:						Yes	No	Unsure
1.	Is this a systematic review?							
2.	Is this an economic evaluation?							
3.	Is an intervention clearly defined?							
4.	Is it relevant to TB control and prevention in countries of low TB incidence?							
5.	Does the study report a direct effect (preventing cases/reducing incidence) as a PRIMARY outcome?							
6.	Does the study report a direct effect (preventing cases/reducing incidence) as a SECONDARY outcome?							
7.	Does the intervention have a plausible INDIRECT effect (preventing cases/reducing incidence)?							
8.	Does the review describe contextual factors ('risk factors') which could modify the effect of an intervention or which, if addressed in a hypothetical intervention, could lead to a reduction TB incidence?							
Classification (circle):		INCLUDE				EXCLUDE		
		1° DIRECT (1, 3, 4, 5 = Yes)	2° DIRECT (1, 3, 4, 6 = Yes)	INDIRECT (1, 3, 4, 7 = Yes)	RISK FACTORS (1, 4, 8 = Yes)	Not systematic (1 & 2 = No)	Not defined (3 = No)	Not relevant (4 = No)
Comment:					Economic only (2, 3, 4 = Yes)	No effect (5, 6 or 7 = No)	Any other reason
