

Supplementary Figure Legend.

Supplementary Figure 1. a) Representative images showed that BMI1 (green) is expressed in the nucleus (DAPI). The mesenchymal marker VIMENTIN (Red) was co-stained. Scale bar represents 100 μm . b) Surface markers for MSCs. Negative markers (CD14, CD34 and CD45) and positive markers (CD73, CD90 and CD105) for MSCs were evaluated by flow cytometry (Grey filled). IgG was used as a control (white). n=4. (c) Images from Alizarin Red S staining for osteoblasts. (d) Alkaline phosphatase activity ($P=0.003$, n=3), (e) RUNX2 ($P=0.037$, n=3) and BSP ($P=0.044$, n=3) mRNA levels in differentiation. (f) Images from Oil Red O staining for adipogenesis. (g) Nile Red⁺ cells ($P=0.0018$, n=3) (h) PPAR γ ($P=0.009$, n=4) and FABP4 ($P=0.041$, n=4) mRNA levels in differentiation. *: $P<0.05$, **: $P<0.01$, ***: $P<0.001$, ****: $P<0.0005$ Data are shown as mean \pm SEM.

Supplementary Figure 2. Loss of p16INK4A partially rescues the proliferative defect of BMI1 knockdown MSCs. (a) mRNA expression of cell-cycle dependent kinase - and inhibitor - related genes in double knockdown MSCs, determined by qRT-PCR. (b) MTT cell growth assay shows cell proliferation differences between shRNAs targeting BMI1 and overexpression of BMI1 MSCs and only shp16 samples rescued cell proliferation close to SCRAMBLE. (c) Colony-forming unit-fibroblast (CFU-F) assay following knockdown and overexpression of BMI1 showed knockdown of p16 in BMI1 knockdown MSCs cannot form colonies. (d) MSCs require BMI1 for survival. Annexin V⁺ cells increase over *in vitro* culture at BMI1 loss MSCs. shBMI1+shp27 at day 9, $P=0,007$, n=3. Overexpression of BMI1 reduces apoptosis. BMI1 at day 6, $P=0.029$, n=3, at day 9, $P=0.009$, n=3. *: $P<0.05$, **: $P<0.01$, ***: $P<0.001$, ****: $P<0.0005$. Data are shown as mean \pm SEM.

Supplementary Figure 3. Gene expression of Imprinted Gene Network (IGN) (a) mRNA expression of IGN in SCRAMBLE, shBMI1 and BMI1 overexpressing samples, normalized as in Fig 1b, were evaluated. GRB10 ($P=0.0064$), H19 ($P=0.017$), and IGF2 ($P=0.017$) were significantly upregulated by

shBMI1. Other IGNs such as p57 (2.08 fold, $P=0.26$), MEG3 (2.3 fold, $P=0.36$), NDN (2.75 fold, $P=0.12$), PEG3 (2.13 fold, $P=0.39$) and PLAGL1 (1.72 fold, $P=0.32$) were upregulated. n=4. (b) IGN expression levels, normalized as in Fig 1b, in osteogenesis were evaluated. GRB10 ($P=0.026$), IGF2 ($P=0.036$), NDN ($P=0.003$) and PLAGL1 ($P=0.029$) were significantly upregulated upon shBMI1 in osteogenesis. Other IGN expression; p57 (15.9 fold, $P=0.16$), DLK1 (5.29 fold, $P=0.15$), MEG3 (7.62 fold, $P=0.13$), MEST (4.8 fold, $P=0.08$) and PEG3 (3.67 fold, $P=0.14$) were upregulated. n=4. (c) IGN expression in adipogenesis is shown; DLK1 ($P=0.007$), H19 ($P=0.023$), IGF2 ($P=0.031$), MEST ($P=0.007$) and NDN ($P=0.46$) were downregulated upon shBMI1 samples in adipogenesis. n=4. *: $P<0.05$, **: $P<0.01$, ***: $P<0.001$, ****: $P<0.0005$ Data shown as mean \pm SEM.

Supplementary Table Legend

Supplementary Table 1. p-value for rescue of cell growth for shBMI MSCs. p-value was calculated in comparison of shBMI1 at specific days. Pink cells show $P<0.05$. Yellow cells represent $P <0.01$. Green cells indicate $P <0.001$. n=3.

Supplementary Table 2. Nucleotide sequences of shRNAs for vector construction, real-time PCR, and overexpression.

Supplementary Table 3. List of antibodies.
