

**Supplementary Information for  
Nanobodies and chemical cross-links advance the structural and  
functional analysis of PI3K $\alpha$**

**This PDF file includes:**

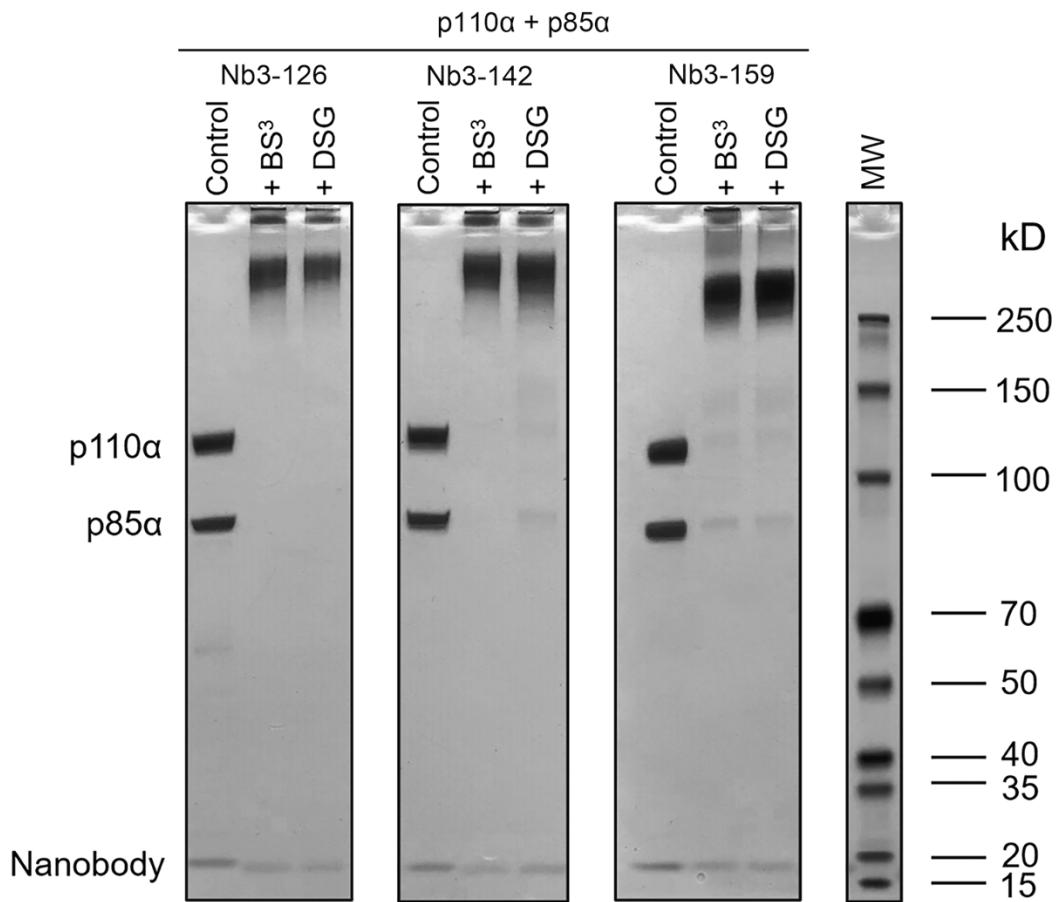

Figures S1 to S8  
Tables S1 to S4

**Other supplementary materials for this manuscript include the following:**

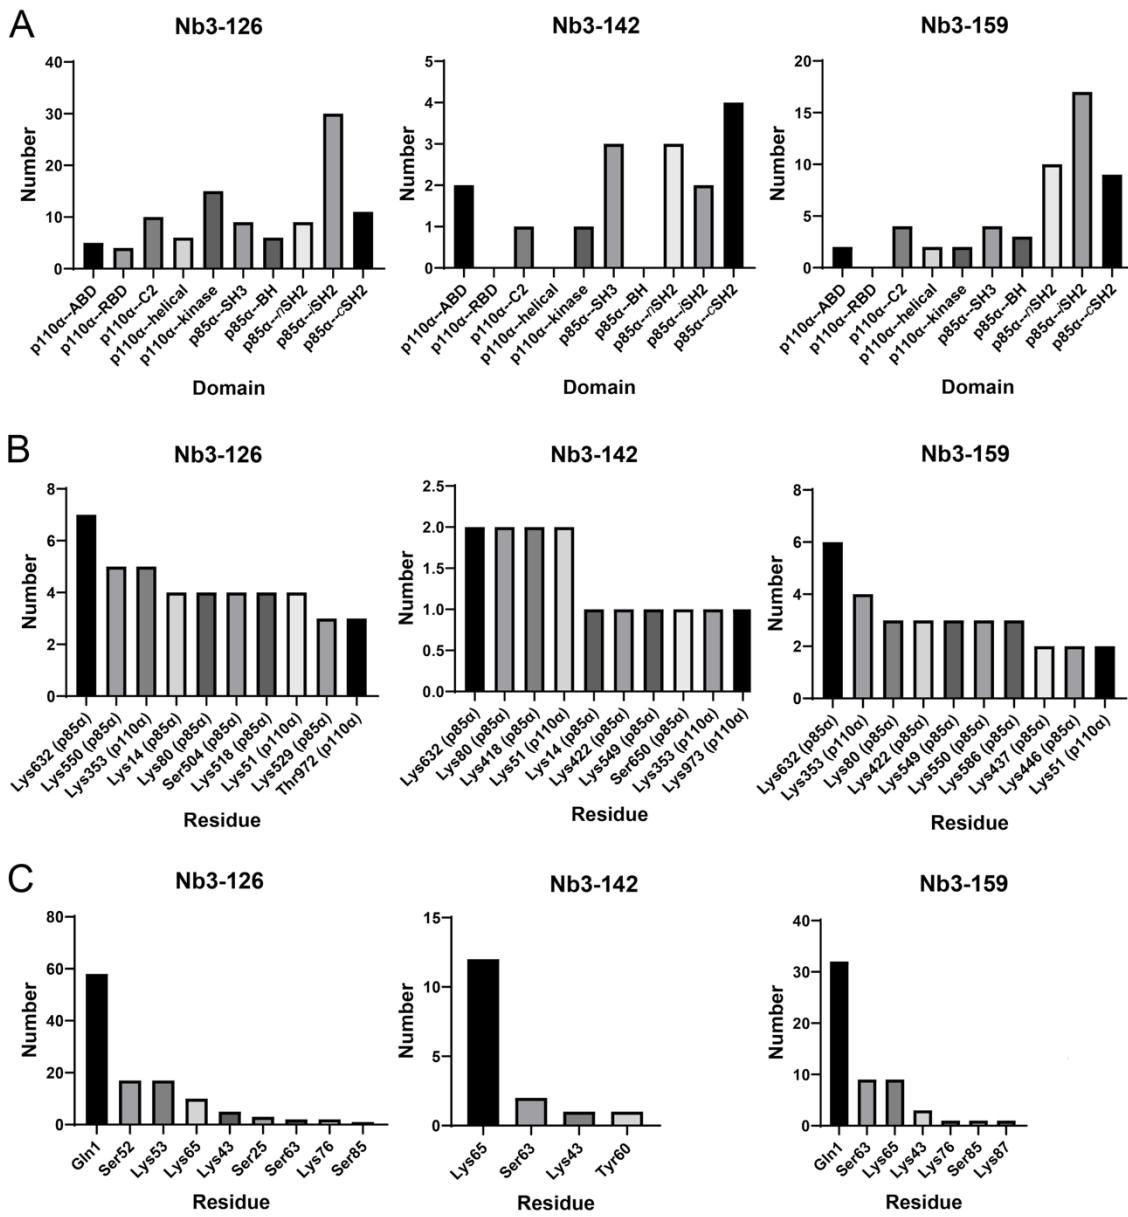

Dataset S1 – Excel file

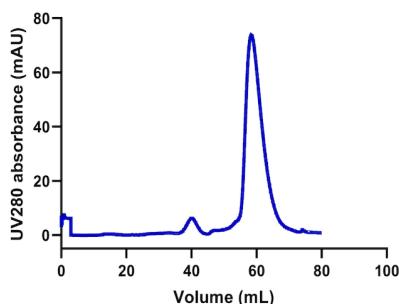

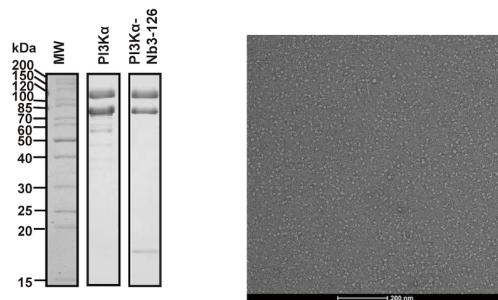

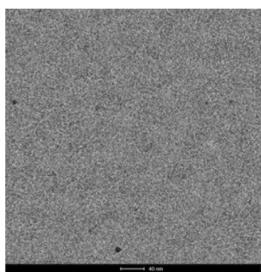

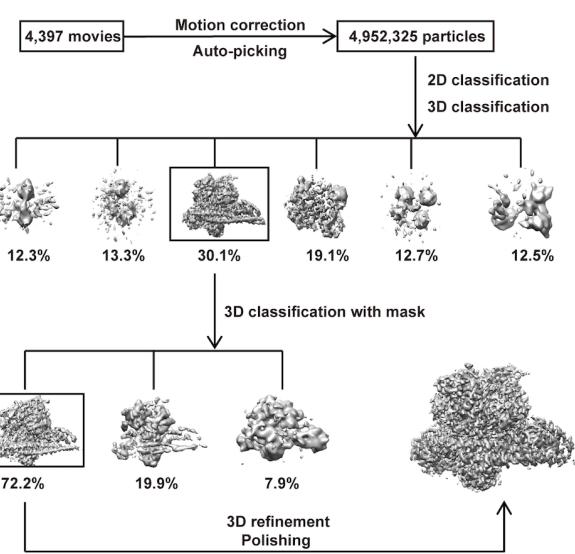

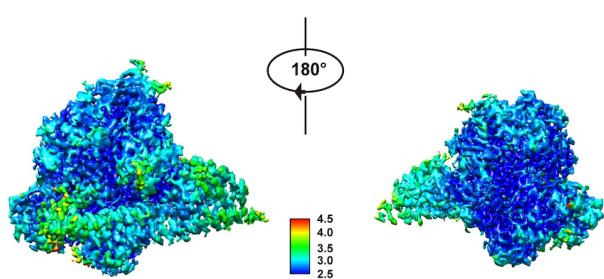

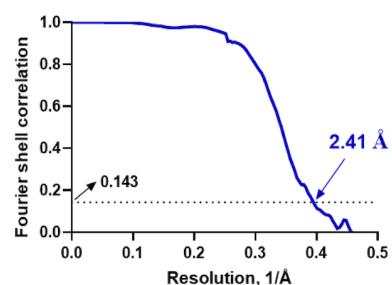

**Fig. S1.** Co-immunoprecipitation of p110 $\alpha$  with indicated N-terminally HA-tagged p85 $\alpha$  truncation constructs. (A) Nb3-126 specifically interacts with p85 $\alpha$  74-326, the BH domain. (B) Nb3-142 and Nb3-159 specifically interact with the nSH2 domain in the 326-415 region.

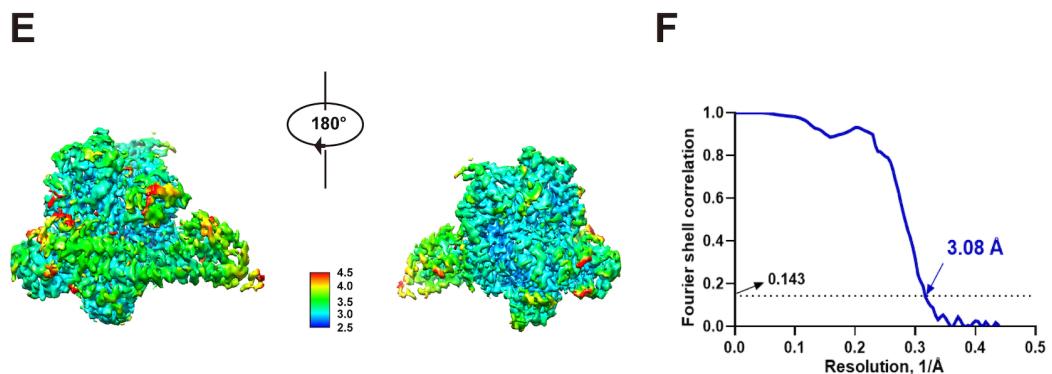

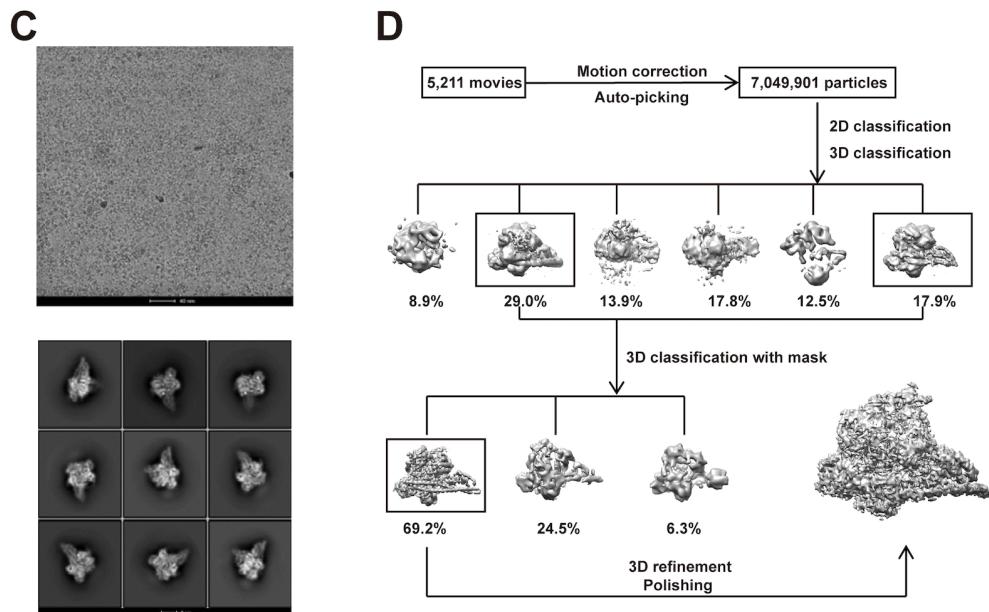

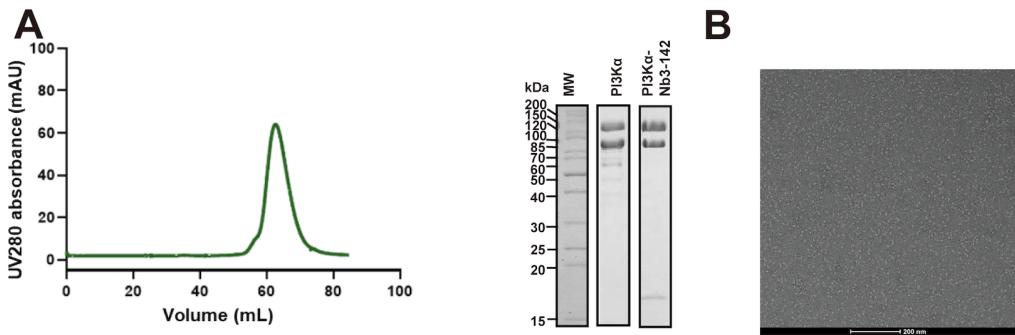

**Fig. S2.** Cross-linking products of PI3K $\alpha$  with Nb3-126, Nb3-142 and Nb3-159 were evaluated using SDS-PAGE.

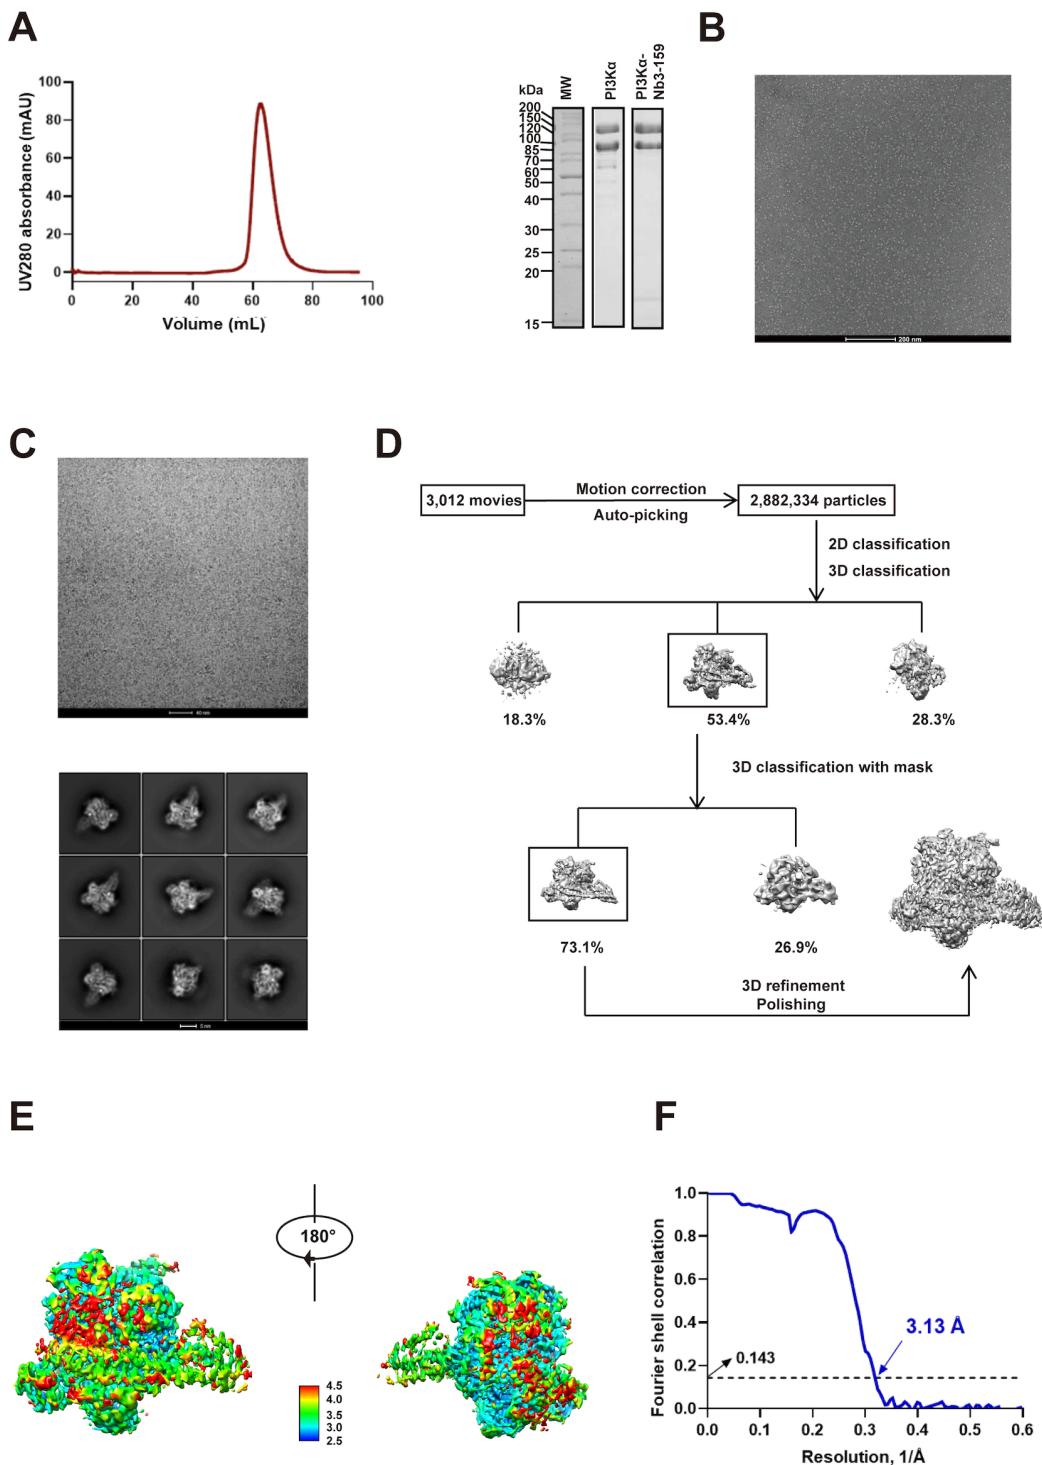

**Fig. S3.** Cross-links assigned between sites of PI3K $\alpha$  and the three nanobodies. (A) The number of identified cross-links between each domain of PI3K $\alpha$  and the nanobodies. (B) The top 10 residues in PI3K $\alpha$  having the largest number of cross-links with the nanobodies. (C) The number of identified cross-links between a specific residue of the nanobody and that of PI3K $\alpha$ .

**A****B****C****D****E****F**

**Fig. S4.** Characterization and cryo-EM analysis of the Nb3-126 complex. (A) Analytical size exclusion chromatography, SDS-PAGE/Coomassie blue stain of the purified Nb3-126 complex. (B) Representative negative staining image of the purified Nb3-126 complex. (C) Representative cryo-EM micrographs of the Nb3-126 complex. Representative 2D class averages showing distinct secondary structure features from different views. (D) Workflow of cryo-EM data processing for the Nb3-126 complex. (E) Cryo-EM maps are colored by local resolution ( $\text{\AA}$ ). (F) 'Gold-standard' FSC curves of the Nb3-126 complex, indicating the resolution is 2.41  $\text{\AA}$  at a FSC of 0.143.

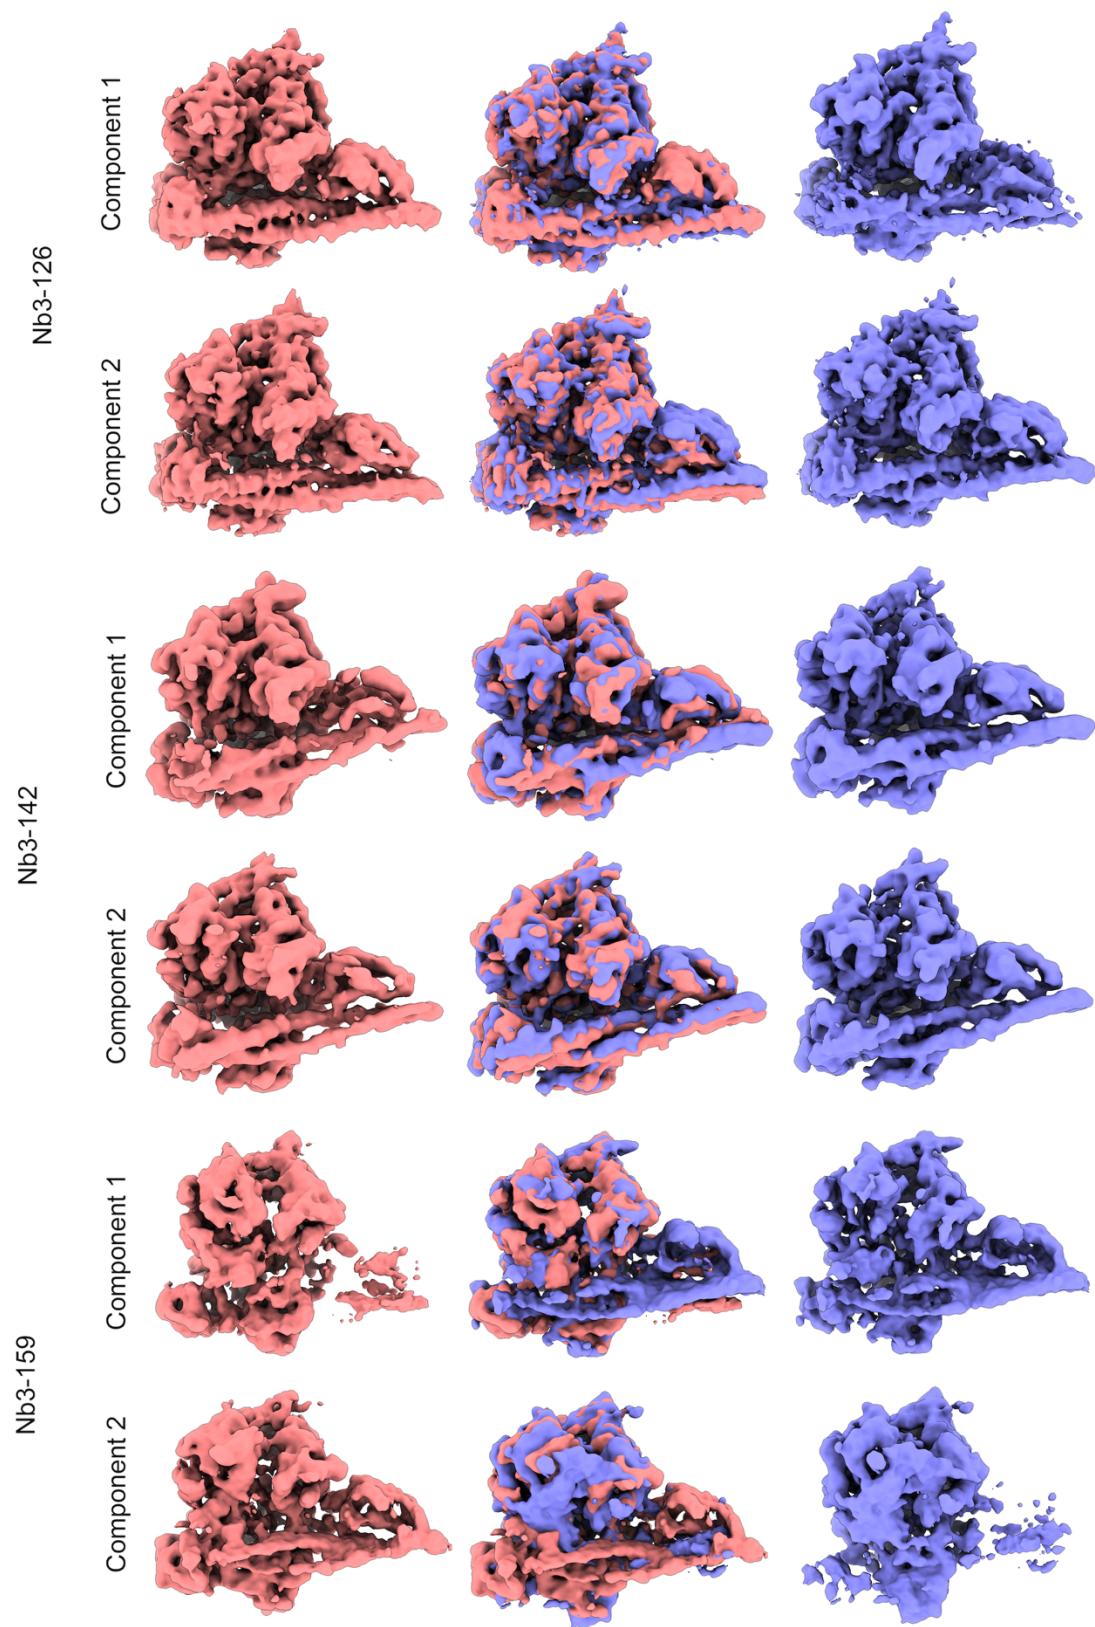

**Fig. S5.** Characterization and cryo-EM analysis of the Nb3-142 complex. (A) Analytical size exclusion chromatography, SDS-PAGE/Coomassie blue stain of the purified Nb3-142 complex. (B) Representative negative staining image of the purified Nb3-142 complex. (C) Representative cryo-EM micrographs of the Nb3-142 complex. Representative 2D class averages showing distinct secondary structure features from different views. (D) Workflow of cryo-EM data processing for the Nb3-142 complex. (E) Cryo-EM maps are colored by local resolution ( $\text{\AA}$ ). (F) 'Gold-standard' FSC curves of the Nb3-142 complex, indicating the resolution is 3.08  $\text{\AA}$  at a FSC of 0.143.

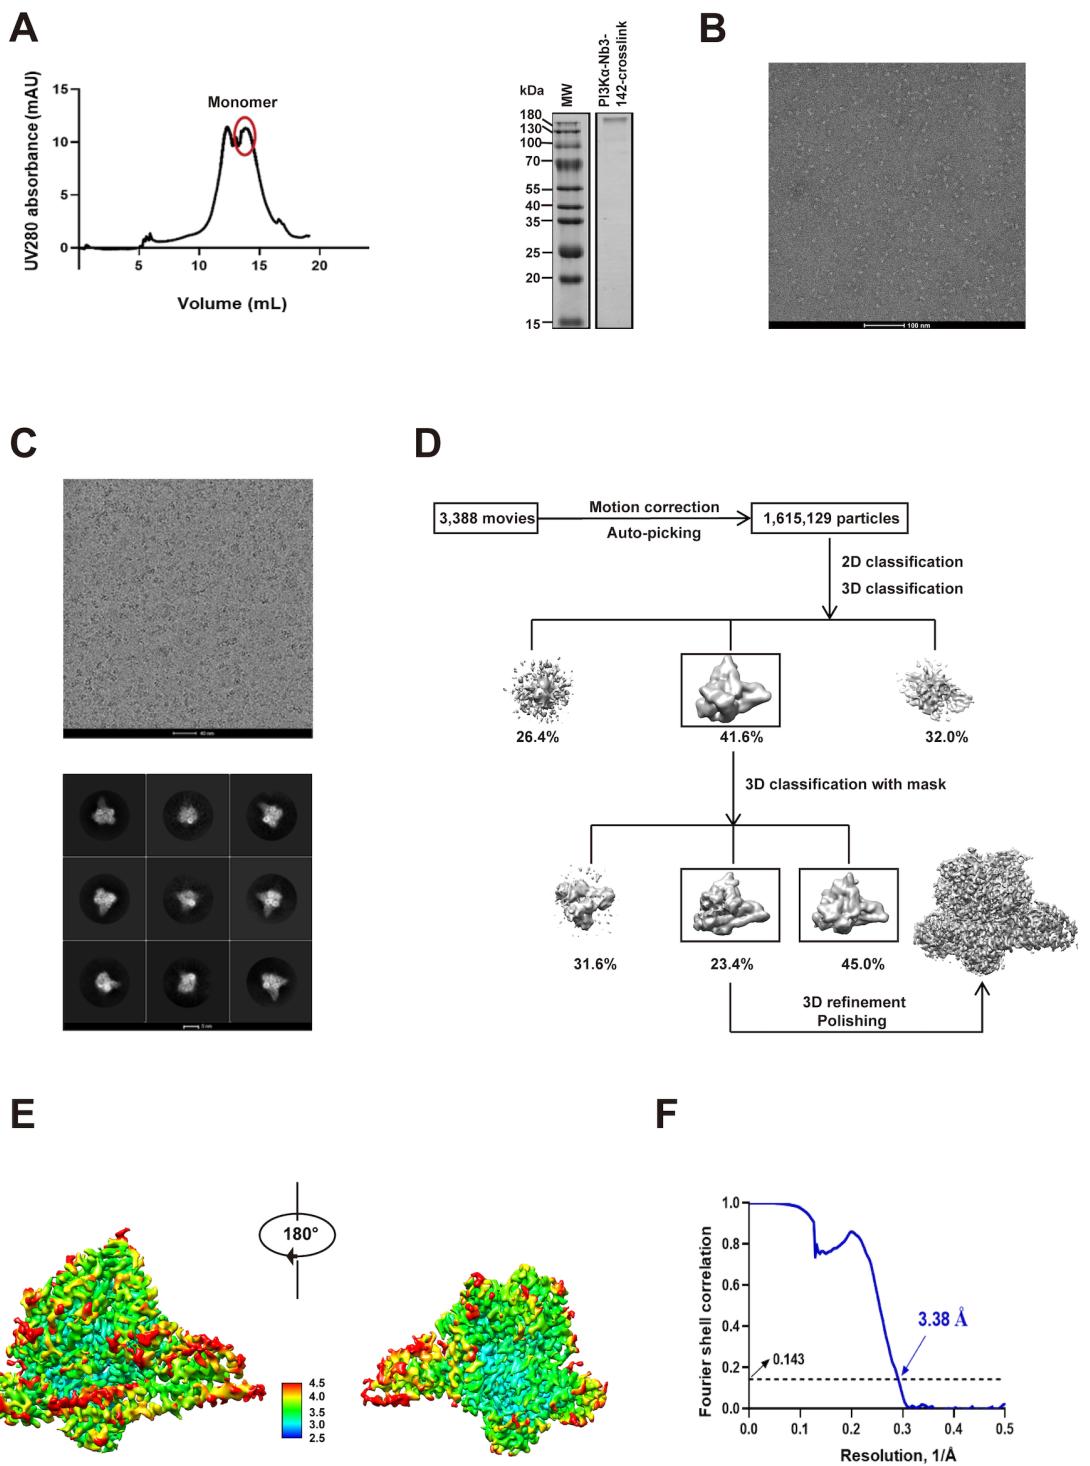

**Fig. S6.** Characterization and cryo-EM analysis of the Nb3-159 complex. (A) Analytical size exclusion chromatography, SDS-PAGE/Coomassie blue stain of the purified Nb3-159 complex. (B)

Representative negative staining image of the purified Nb3-159 complex. (C) Representative cryo-EM micrographs of the Nb3-159 complex. Representative 2D class averages showing distinct secondary structure features from different views. (D) Workflow of cryo-EM data processing for the Nb3-159 complex. (E) Cryo-EM maps are colored by local resolution (Å). (F) 'Gold-standard' FSC curves of the Nb3-159 complex, indicating the resolution is 3.13 Å at a FSC of 0.143.

**Fig. S7.** 3D variability analysis of Nb3-126, Nb3-142, and Nb3-159. The indicated complexes are shown as positive (red) and negative (blue) variations with the components displayed. Nb3-126 and Nb3-142 both show two motions of the ABD and iSH2 corresponding to a side-to-side and up-and-down motion of the ABD-iSH2 region. However, Nb3-159 shows a radical deflection of the ABD-iSH2 domain in component 1 positive (red) and near complete disorder of the ABD and iSH2 domains in the component 2 negative (blue). Both of these motions are accompanied by major structural changes in the kinase domain including narrowing of the active site.

**Fig. S8.** Characterization and cryo-EM analysis of the DSG cross-linked Nb3-142 complex. (A) Analytical size exclusion chromatography, SDS-PAGE/Coomassie blue stain of the purified cross-linked Nb3-142 complex. (B) Representative negative staining image of the purified cross-linked Nb3-142 complex. (C) Representative cryo-EM micrographs of the cross-linked Nb3-142 complex. Representative 2D class averages showing distinct secondary structure features from different views. (D) Workflow of cryo-EM data processing for the cross-linked Nb3-142 complex. (E) Cryo-EM maps are colored by local resolution (Å). (F) ‘Gold-standard’ FSC curves of the cross-linked Nb3-142 complex, indicating the resolution is 3.38 Å at a FSC of 0.143.

**Table S1.** Inter-protein cross-links identified between PI3K $\alpha$  and Nb3-126.

<sup>a</sup>E-value means normalized refined\_scores for filtered peptide spectrum matches (PSMs) by FDR, the smaller the more confident. Best E-value is the smallest E-value of all spectra of the cross-linked peptide. <sup>b</sup>Score, which is short for SVM score in pLink 2, is the prime measure for FDR estimation. Best score is the smallest value of all spectra of the cross-linked peptide.

**Table S2.** Inter-protein cross-links identified between PI3K $\alpha$  and Nb3-142.

<sup>a</sup>E-value means normalized refined\_scores for filtered peptide spectrum matches (PSMs) by FDR, the smaller the more confident. Best E-value is the smallest E-value of all spectra of the cross-linked peptide. <sup>b</sup>Score, which is short for SVM score in pLink 2, is the prime measure for FDR estimation. Best score is the smallest value of all spectra of the cross-linked peptide.

**Table S4.** Cryo-EM data acquisition and image processing.

Data collection				
Microscope	Titan Krios			
Voltage (kV)	300			
Corrected magnification	46,685			
Pixel size (Å)	1.071			
Detector	Gatan K3 Summit			
Defocus range (μm)	-1.5 to -2.5			
Defocus mean (μm)	-2.0			
Total electron exposure (e-Å <sup>-2</sup> s <sup>-1</sup> )	70			
Exposure rate (e-Å <sup>-2</sup> frame <sup>-1</sup> )	25			
Data processing	PI3Kα–Nb3–126	PI3Kα–Nb3–142	PI3Kα–Nb3–159	PI3Kα–Nb3–142 (cross-linked)
Useable image movies	4,397	5,211	3,012	3,388
Particles	4,952,325	7,049,901	2,882,334	1,615,129
Final particles	506,412	739,753	240,599	217,230
Map sharpening B factor (Å <sup>2</sup> )	-81.3	-163.2	-144.3	-130.3
