Notes & Legend * Analytic Sample was ages 15-19 at the 1979 baseline survey. Survey years shown in cells. R= Round (R1= 1979 round)

Tan: No survey administered; NLSY changed to biennial follow-up interviews after 1994.

Heavy Drinking Frequency measured in Young Adulthood (ages 24-29) and Midlife (ages 42-52) Orange:

Poverty duration measured in Adolescence (ages 15-19) and in Adulthood (ages 36-42)

Repeated unemployment measured in Adulthood (ages 26-38)

Cells with different colored borders indicate that the survey year provided more than one key measure (e.g., adult unemployment and poverty)
