

Supplementary Table 3. Progression to late age-related macular degeneration subtypes in the Age-Related Eye Disease Study 2, by person: hazard ratios associated with reticular pseudodrusen presence and different levels on the modified Simplified Severity Scale, considered simultaneously.

Modified Simplified Severity Scale level (reference 0-2) or RPD presence (reference absent)	Geographic atrophy		Neovascular AMD	
	Hazard ratio (95% CI)	P value	Hazard ratio (95% CI)	P value
Level 3	1.99 (1.18-3.37)	0.010	2.21 (1.46-3.35)	0.0002
Level 4	5.72 (3.68-8.90)	<0.0001	2.50 (1.72-3.62)	<0.0001
RPD present	1.55 (1.11-2.17)	0.010	0.98 (0.65-1.48)	0.93

Abbreviations: AMD=age-related macular degeneration; CI=confidence interval; RPD=reticular pseudodrusen
