

Supplementary Fig. 1. Results of quality assessments of the articles according to QUADAS-2 criteria. The methodological quality distribution of the articles is presented as the proportion of articles (0%–100%) with a low (i.e., high quality), high, and unclear risk of bias, and the proportions of articles with low (i.e., high quality), high, or unclear concerns regarding applicability for each domain. QUADAS = Quality Assessment of Diagnostic Accuracy Studies
