eAppendix 1. Records of Dementia

The full lists of dementia terms and codes used in our study are available in eTable 1 and eTable 2 below for Clinical Practice Research Datalink (CPRD) GOLD and CPRD Aurum, respectively. eTable 3 lists the International Statistical Classification of Diseases and Related Health Problems 10th version (ICD-10) codes and terms used for identifying dementia diagnosis in Hospital Episode Statistics (HES). This code list for identifying dementia diagnosis was reviewed and approved by Charles Marshall, an expert in dementia management.

Dementia diagnosis records in CPRD were validated by Walker et.al (2018) using HES and ONS as the reference standards¹. The result of their work is summarised in eTable 4 below. Specificity was high, but sensitivity was modest. The accuracy of those records will have increased further by additional ascertainment of dementia from secondary care data^{2,3}.

eAppendix 2. Records of Psychiatric Illnesses

We identified records in CPRD and HES of the following categories of psychiatric illnesses: affective disorders, schizophrenia spectrum (and other psychosis), anxiety including obsessive compulsive disorders, personality disorders, eating disorders, sleep disorders, and substance misuse. An extra category was used for patients with more than one identified psychiatric illness. Codes used to identify psychiatric illnesses in CPRD GOLD were based on previously published lists¹⁻³; we then updated those lists. For CPRD Aurum and HES, we created our own code lists.

The full lists of terms and codes for psychiatric illnesses used in our study are available in eTable 5 and eTable 6 below for Clinical Practice Research Datalink (CPRD) GOLD and CPRD Aurum, respectively. eTable 7 lists the International Statistical Classification of Diseases and Related Health Problems 10th version (ICD-10) codes used for identifying psychiatric illnesses in Hospital Episode Statistics (HES).

Although the accuracy and completeness of diagnostic coding in CPRD has been validated by two systematic reviews and proven to be of high quality^{4,5}, the validation of codes for a wide range of psychiatric illness in CPRD has not been carried out yet. Nevertheless, codes for selective mental health conditions related to schizophrenia and psychosis were validated in VAMP (the former system employed by CPRD)⁶. The authors manually reviewed primary care computer records and reported a sensitivity of 88% (95% CI: 62% to 98%) and 91% (95% CI: 74% to 97%) for records of schizophrenia and non-organic psychosis, respectively. The positive predictive value for schizophrenia and non-organic psychosis were 71% (95% CI: 48% to 88%) and 91% (95% CI: 74% to 98%), respectively.
