Supplementary file 4. Median differences at baseline and 3 months in the control group and intervention group.

	Control			Intervention			p value*
	Baseline no, Median (IQR)	3 months, Median (IQR)	Change from baseline (median)	Baseline no, Median (IQR)	3-month no, Median (IQR)	Change from baseline (median)	
SE, median (IQR)	31 (27- 40)	31 (22- 39)	0.5	30 (26- 35)	30 (30-38)	0	0.731
MSAS, no median (IQR)	6 (3-11)	9 (3-18)	2	7 (3-13)	10 (5-22)	1	0.724
MSAS, often, median (IQR)	11 (2-36)	13 (6-38)	7.5	14 (4-25)	15 (7-49)	2	0.504
MSAS, severe, median (IQR)	12 (0-26)	13 (5-52)	5	10 (3-23)	13 (6-40)	2	0.393
MSAS, distress, median (IQR)	11 (0-28)	12 (3-30)	5.5	8 (2-19)	12 (6-39)	2	0.600

*Mann–Whitney U test comparing changes from baseline between the control and intervention groups. Abbreviations: Often: how often the patient had a symptom, Severe: how severe the symptom usually experienced by the patient was, Distress: how much the experienced symptom distressed or bothered the patient.

	Control 3 months, n (%)	Intervention 3 months, n (%)
13. I received useful information on what	16* (93.75%)	17* (88.24%)
I needed to be able to participate in my		
own care		
19. I had adequate information about my	18* (77.78%)	18* (72.22%)
medicines, so I understood the effect and		
how to use them		
20. I had an opportunity to share my	15* (86.67%)	17* (82.35%)
experience with health care professionals		
32. I had a good opportunity to confer in	14* (85.71%)	15* (73.33%)
decisions about my own care		
33. I had a good opportunity to	15* (86.67%)	12* (75.00%)
participate in my own care		
34. My care was directed by my needs	16* (100%)	17* (82.35%)
rather than the health care professionals'		
routines		

*Caution: If less than 30, the results should be regarded with caution.

To measure perceived reality concerning the quality of care, every question was phrased as a statement. The response alternatives were given on a scale between 4 (Fully agree) and 1 (Do not agree at all). Percentage in agreement represents the patients who answered 3 (Mostly agree) and 4 (Fully agree) divided by

the total number of patients who answered 1-4 on the question. Answer 5 (Not applicable) is not included.
