## **Appendix Figure S1. CDK9 inhibition abrogates polyadenylation.**

**A.** Pol II ChIP-qPCR on the TNF $\alpha$ -induced gene LDLR and screenshot of the genome browser track of the 3'READS experiments for this gene. n=3 biological replicates, mean  $\pm$  SEM, p-value: \* p < 0.05, \*\* p < 0.01. Statistical test: two-tailed unpaired t test. **B.** qRT-PCR of nuclear polyadenylated mRNAs of several TNF $\alpha$ -induced or non-induced genes with a 30 minutes DMSO or a DRB (100  $\mu$ M here and in all other figures unless stated otherwise) treatment. n=5 biological replicates, mean  $\pm$  SEM, p-value: \* p < 0.05, \*\* p < 0.01, \*\*\* p < 0.001. Statistical test: two-tailed unpaired t test. **C.** Western blot of  $\beta$ -tubulin, Nucleolin, and Histone H3 on whole cell extract, nucleoplasm, and chromatin fractions. **D.** Western blot of total pol II, Ser2P, Xrn2, CPSF2, CPSF73, and  $\beta$ -tubulin as a loading control, on whole cell extract. **E.** Quantification of the western blots shown in D. n=2 biological replicates except for CPSF73 DRB 30 min where n=3 biological replicates, mean  $\pm$  SEM. **F.** Screenshot of the genome browser track of the 3'READS experiments for *KPNB1* showing the usage of two poly(A) sites in HEK293 and HeLa cell lines. **G.** ChIP-qPCR of total pol II, CPSF73, PAPOLA, and Xrn2 on *KPNB1*. The CPA factor / total pol II ratios shown in Figure 1F were calculated based on the pol II profile located below each CPA factor ChIP-qPCR profile. n=3 biological replicates, mean  $\pm$  SEM, p-value: \* p < 0.05, \*\* p < 0.01, \*\*\* p < 0.001. Statistical test: two-tailed unpaired t test.

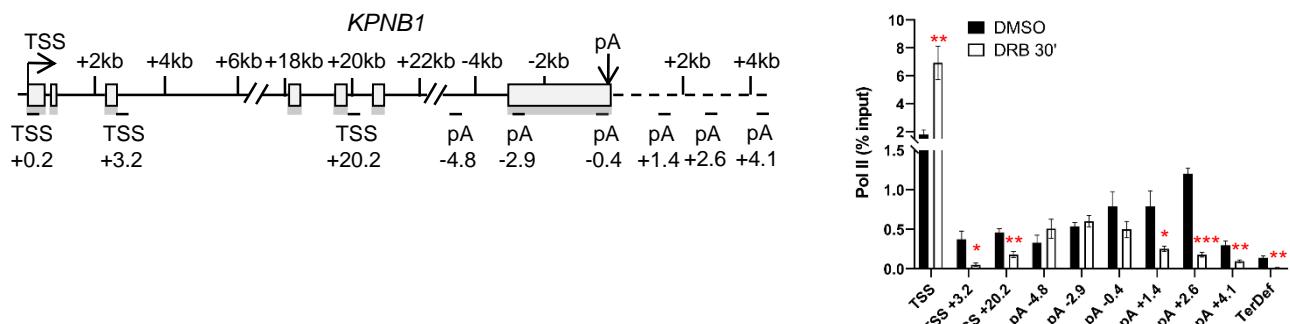

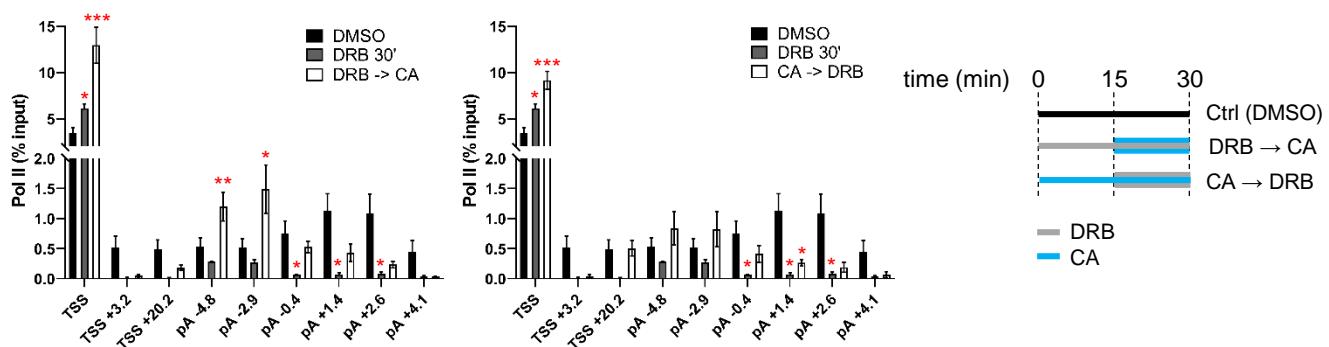

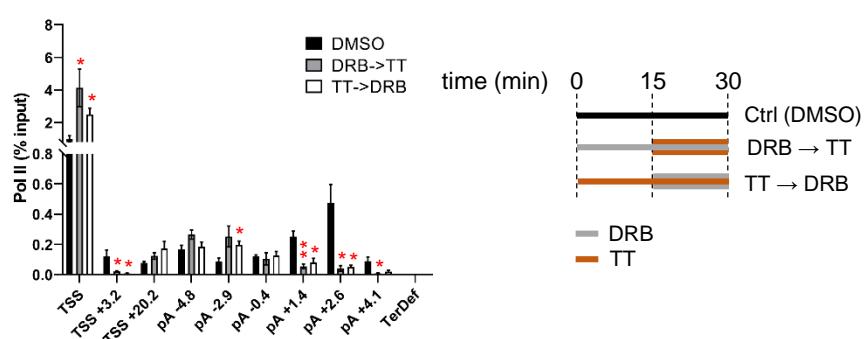

## **Appendix Figure S2. Inhibition of analog sensitive CDK9 (as) produces similar results to the current CDK9 inhibitors.**

ChIP-qPCR of Ser2P (Abcam or Cell Signaling), and Ser5P (Abcam or Cell Signaling) in CDK9as cells treated with 15mM 1-NA-PP1 for 15 minutes on *KPNB1*. n=3 biological replicates, mean  $\pm$  SEM, p-value: \* p < 0.05, \*\* p < 0.01, \*\*\* p < 0.001. Statistical test: two-tailed unpaired t test.

**A****B****C**

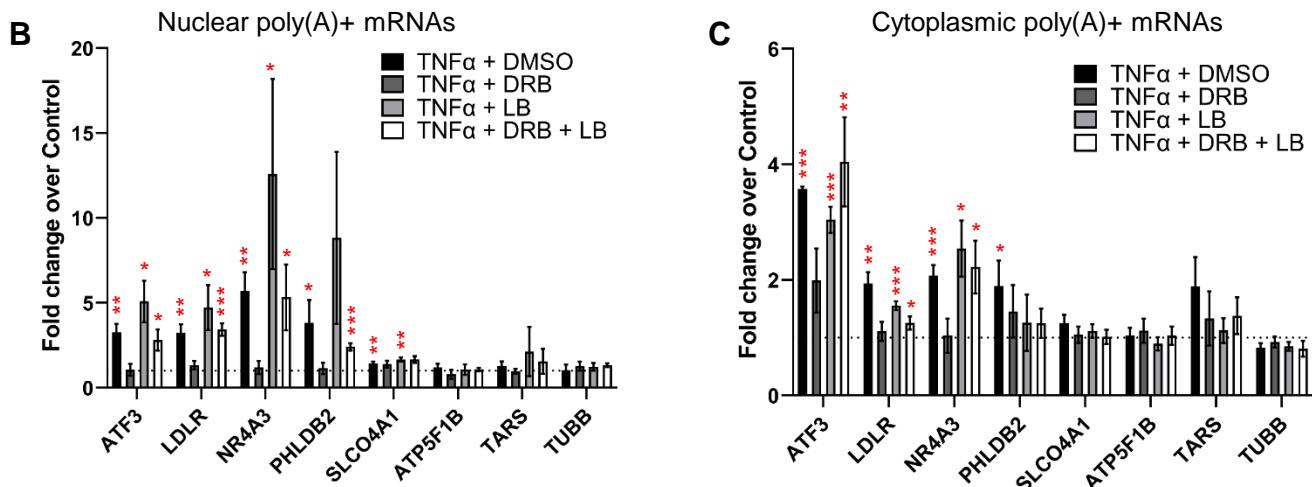

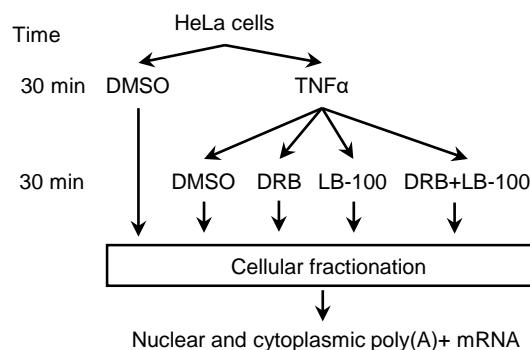

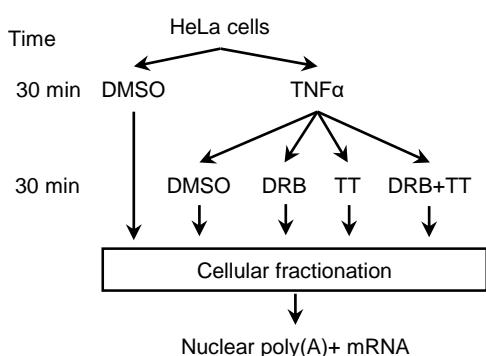

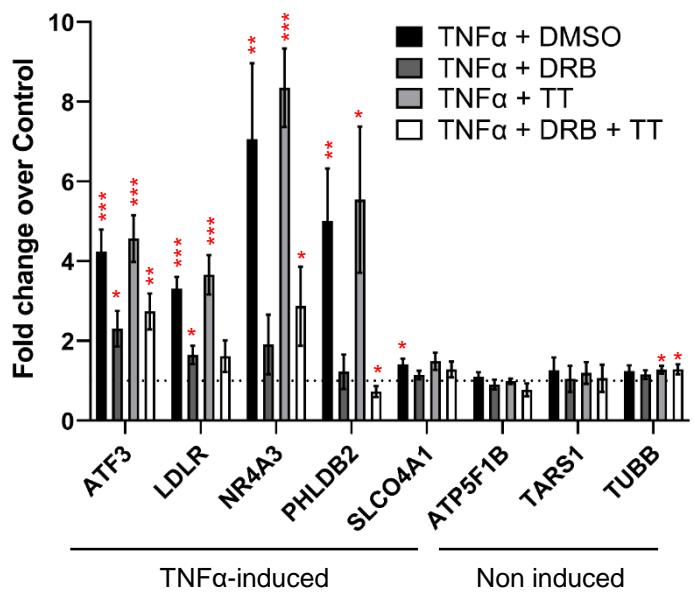

### **Appendix Figure S3. CDK9 phosphorylates several transcription and splicing factors *in vivo*.**

**A.** Western blot of Myc, Myc S62P, Histone H3, Histone H3 S10P, and Nucleolin as a loading control, on whole cell extract of HeLa cells treated for 30 minutes with DMSO, DRB, CA, LB-100, or TT. **B.** Western blot of total pol II, Ser2P, Ser5P, and histone H3 as a loading control, on the chromatin fraction of CDK9as cells treated for 30 minutes with DMSO, NA, CA, TT, NA+CA, or NA+TT. The histone H3 loading control (CA samples) is the same as the loading control shown in Figure 4B as the same experiment is shown in two different figures. **C.** Quantification of the western blots shown in B. n=3 biological replicates except for Ser2P / pol II NA and TT and for Ser5P/ pol II NA and NA+TT where n=2 biological replicates, mean  $\pm$  SEM, p-value: \* p < 0.05, \*\*\* p < 0.001. Statistical test: two-tailed unpaired t test.

**A****B****C**

## **Appendix Figure S4. PP1 and PP2A regulate transcription of protein-coding genes.**

**A.** ChIP-qPCR of total pol II after 30 minutes treatment with DMSO or DRB on *KPNB1*. n=3 biological replicates, mean  $\pm$  SEM, p-value: \* p < 0.05, \*\* p < 0.01, \*\*\* p < 0.001. Statistical test: two-tailed unpaired t test. **B.** ChIP-qPCR of total pol II after 30 minutes treatment with DMSO or DRB, or 15 minutes treatment with DRB or CA followed by another 15 minutes with CA (DRB->CA) or DRB (CA->DRB), respectively, on *KPNB1*. n=3 biological replicates, mean  $\pm$  SEM, p-value: \* p < 0.05, \*\* p < 0.01, \*\*\* p < 0.001. Statistical test: two-tailed unpaired t test. **C.** ChIP-qPCR of total pol II after 30 minutes treatment with DMSO or DRB, or 15 minutes treatment with DRB or TT followed by another 15 minutes with TT (DRB->TT) or DRB (TT->DRB), respectively, on *KPNB1*. n=3 biological replicates, mean  $\pm$  SEM, p-value: \* p < 0.05, \*\* p < 0.01, \*\*\* p < 0.001. Statistical test: two-tailed unpaired t test.

## **Appendix Figure S5. CDK9 and PP2A regulate mRNA cleavage and polyadenylation.**

**A.** Schematic of the nuclear and cytoplasmic qRT-PCR experiments. **B.** qRT-PCR of nuclear polyadenylated mRNAs of several TNF $\alpha$  induced or non-induced genes with a 30 minutes DMSO, DRB, LB, or DRB+LB-100 treatment. n=3 biological replicates, mean  $\pm$  SEM, p-value: \* p < 0.05, \*\* p < 0.01, \*\*\* p < 0.001. Statistical test: two-tailed unpaired t test. **C.** qRT-PCR of cytoplasmic polyadenylated mRNAs of several TNF $\alpha$  induced or non-induced genes with a 30 minutes DMSO, DRB, LB-100, or DRB+LB-100 treatment. n=3 biological replicates, mean  $\pm$  SEM, p-value: \* p < 0.05, \*\* p < 0.01, \*\*\* p < 0.001. Statistical test: two-tailed unpaired t test. **D.** Schematic of the nuclear qRT-PCR experiments. **E.** qRT-PCR of nuclear polyadenylated mRNAs of several TNF $\alpha$  induced or non-induced genes with a 30 minutes DMSO, DRB, TT, or DRB+TT treatment. n=4 biological replicates, mean  $\pm$  SEM, p-value: \* p < 0.05, \*\* p < 0.01, \*\*\* p < 0.001. Statistical test: two-tailed unpaired t test.

**Appendix Table S1:** List of antibodies used in mNET-seq, ChIP, co-immunoprecipitation, and western blots.

Antibody	Supplier	Catalogue number	Applications
Mouse monoclonal anti-Pol II CTD, Total	MBL international	MABI0601	mNET-seq
Rpb1 NTD (D8L4Y) Rabbit mAb	Cell Signaling Technology	14958S	ChIP, ChIP-seq, Western blot
Phospho-Rpb1 CTD (Ser2) (E1Z3G) Rabbit mAb	Cell Signaling Technology	13499S	ChIP, Western blot
Phospho-Rpb1 CTD (Ser5) (D9N5I) Rabbit mAb	Cell Signaling Technology	13523S	ChIP, Western blot
RNA pol II antibody (mAb)	Active Motif	39097	Co-immunoprecipitation
Anti-RNA polymerase II CTD repeat YSPTSPS (phospho S2) antibody	Abcam	ab5095	Western blot
Anti-RNA polymerase II CTD repeat YSPTSPS (phospho S5) antibody	Abcam	ab5131	Western blot
Rabbit anti-SF3b155/SAP155 Antibody, Affinity Purified	Bethyl Laboratories	A300-996A	Western blot
SF3b1 T142P	This study	/	Western blot
Anti-SAP155 Monoclonal Antibody	MBL international	D221-3	Co-immunoprecipitation
Rabbit anti-SF3B3 Antibody, Affinity Purified	Bethyl Laboratories	A302-508A	Western blot
Myc	Santa Cruz Biotechnology	sc-764X	Western blot
Myc S62P	Abcam	ab51156	Western blot
Anti-Cdk9 antibody [EPR3119Y]	Abcam	ab76320	Western blot
Cyclin T1 (H-245)	Santa Cruz Biotechnology	sc-10750	Western blot
Rabbit anti-CPSF30 Antibody, Affinity Purified	Bethyl Laboratories	A301-584A	ChIP, Western blot
Rabbit anti-CPSF73 Antibody, Affinity Purified	Bethyl Laboratories	A301-091A	ChIP, Western blot
Rabbit anti-CPSF100 Antibody, Affinity Purified	Bethyl Laboratories	A301-581A	ChIP, Co-immunoprecipitation, Western blot
Rabbit anti-PAPOLA Antibody, Affinity Purified	Bethyl Laboratories	A301-008A	ChIP, Western blot
Rabbit anti-XRN2 Antibody, Affinity Purified	Bethyl Laboratories	A301-103A	ChIP, Western blot
Histone H3	Abcam	ab1791	Western blot
Histone H3 S10P	Life Technologies	PA517869	Western blot
Nucleolin	Abcam	ab22758	Western blot
Beta-actin	Cell Signaling Technology	4967S	Western blot
Anti-beta Tubulin antibody - Loading Control	Abcam	ab6046	Western blot
Normal Rabbit IgG	Cell Signaling Technology	2729S	ChIP, Co-immunoprecipitation

**Appendix Table S2:** List of primers used for ChIP-qPCR and qRT-PCR
