

SUPPLEMENTARY FIGURES

Supplementary Figure S1

Supplementary Figure S1: Cell counts after splenic cell isolation. (a) Total lymphocyte counts immediately after splenic isolation (isolated as described in the Materials and Methods section). (b) Cell counts of CD4⁺Foxp3⁺ cells and CD4⁺Foxp3⁺ cells expressing various regulatory T cell markers. * $P \leq 0.05$; *** $P \leq 0.001$. Data is representative of 3 independent experiments, with 4 samples per group. Mean + standard deviation shown.

Supplementary Figure S2

Supplementary Figure S1 Treg surface markers on C57BL/6, FVB/N, and BALB/c CD4⁺Foxp3⁻ Teff cells. (a) Freshly isolated splenocytes were stained and analyzed. Expression was analyzed using flow cytometry. Lymphocytes were gated on based on forward scatter/side scatter and then subsequently gated on CD4⁺Foxp3⁻ cells.
