

Supplementary Figure S5 – Analysis of hypocotyl elongation in response to elevated far-red levels (shade avoidance response). Hypocotyl length of Col-0 wildtype and *fio1-1* and *fio1-5* mutants grown in either white light conditions or in far-red light enriched white light conditions (+FR). The *fio1* mutants show a hypersensitivity response with increase hypocotyls in white light and even longer hypocotyls in shade conditions.
